Japan to increase kit exports, regain crown in '80s

U.S. to reign as output king—briefly

Continued from Page 1

chunk of those kits will be assembled.

In fact, Lawson predicted 35 to 40 percent of those 1.8 million Japanese kits will be assembled in the U. S. by 1990. Another 30 percent or so will be built in Europe, Australia and other developed nations, and the remaining 30 to 35 percent assembled in developing nations.

"The conventional wisdom would be that these kits would go to developing countries because they have insufficient manufacturing infrastructure to build vehicles themselves," Lawson said. "Paradoxically enough, they are going to developed countries, especially the U. S."

Honda, for example, is expected to be assembling 300,000 to 350,000 cars annually in the U. S. by 1990. Toyota and General Motors will add 200,000 when (if) their joint venture begins. Nissan will probably be building cars as well as trucks in the U. S. by 1990, Lawson said.

The U. S. is far more attractive than Europe to the Japanese because the U. S. is more likely to allow local assembly, Lawson said.

He pointed to Nissan's on-and-off-and-on again plans to assemble cars in Great Britain. In order to make UK assembly worthwhile, 200,000 units a year should be built, he said.

But in order to find a market for that many cars, Nissan would have to send some of its products to the continent.

"There they could run afoul of European protectionism and nationalism," Lawson said.

France and Italy likely would not accept the cars as British because of their high Japanese content, he said.

"It is not at all clear that Nissan will be able to obtain access to those markets," he said.

There's another reason to aim at the North American market: The car market is expected to grow nearly 3 percent a year through 1990, compared with annual growth rates of 2 percent in Japan and Europe.

By 1990, U. S. car sales are expected to reach 11.76 million; North American sales, 12.90 million. The Japanese market is expected to grow from last year's 3.13 million to 3.61 million. And Western European auto sales will go from the 1983 total of 10.46 million to 11.74 million in 1990.

"The spectacular growth in the Japanese market has come to a close," Lawson said.

Increases in the driving-age population and in the number of women drivers will push Japanese new-car sales up slightly.

But several factors will cap sales.

First of all, much of the growth will come from second cars in two-car families. These will be driven only short distances, so used cars will be perfectly acceptable.

Second, Japan's car fleet is relatively young, so replacement demand is low. Finally, the small size of the Japanese islands will limit the number of cars that can be accommodated without major road-building projects, Lawson said.

In 1990, Japan will have 370 cars for every 1,000 people of driving age. Today in the U. S., there are already 612 cars per 1,000 drivers.

That slow growth in the Japanese home market is one reason Japanese makers are expected to see their profits diminish in mid-decade. Competition at home is already cutthroat, with profit margins squeezed nearly to the point of red ink.

But when the expected recession and high yen values hit, the cushion provided by foreign profits will be much thinner. Local assembly will have eroded Japanese profits even more.

Lawson said he expects the value of the yen to rise from the 1983 average of 236 per dollar to 162 per dollar at the end of the decade. And that would cause the Japanese auto makers, which have heavy debt loads, to restructure.

"There won't be fewer names (companies) around, but there will have to be moves to cut costs in the industry," Lawson said. "For example, they won't be able to finance their current R&D levels," and instead will have to do more joint development work.

cars are assembled in the U. S.

But even if 700,000 Japanese cars are assembled in the U. S. in 1990, it won't be enough to make the U. S. the world's biggest car producer.

Until the Japanese took the world's car production crown in 1980, it had belonged to the U. S.

This year's forecasted U. S. auto production of 7.67 million units will make the U. S. the leader again, as the Japanese produce 7.41 million.

The U. S. should retain its No. One spot next year, producing 7.70 million cars compared with Japan's 7.64 million.

But Japan is expected to regain the lead in 1987 with production of 7.69 million, compared with 7.63 million for U. S. makers. The Automotive News World Outlook calls for Japan to widen its lead through 1990.

The fate of the Japanese truck makers parallels that of the country's car makers, with one exception: Japanese exporters of medium and heavy-duty trucks don't have a giant manufacturing lead on U. S. and European truck makers, Lawson said.

So the Hinos, Isuzus and Nissans that are making their way into the U. S. and Europe won't have quite the same cost advantages that the Japanese car makers enjoy outside their home market.

Depressed economies in the Mideast and Africa have slowed Japanese truck export growth. Japanese truck makers are setting up shop in those countries, which have long been the bastions of European truck makers.

When those markets rebound in the late 1980s, the Japanese will come out stronger than the Europeans, Lawson predicted.

But from 1983 through 1988, truck sales in Japan are expected to stay flat, at or below the 2.2 million mark, as the Japanese economy is hit by recession.

The forecast calls for the Japanese economy to rebound and take truck sales with it in 1988, bringing the total to 2.6 million in 1990.

In the same 1983-1990 period in which the Japanese truck market is expected to rise a total of only 18 percent, U. S. truck sales are expected to grow 48 percent — 46 percent growth for light trucks and 93 percent for the mediums and heavies.

Minitrucks will be the only trucks to fare well in that time frame in Japan, Lawson said.

Alpen expands

WEST LIBERTY, Ia. — Ron Alpen and Joe Stift are co-owners of a new satellite dealership of Ron Alpen Ford, Inc., Durant.

But week's output falls by 2,000 cars

19 auto plants schedule overtime

By Joe Wilssens
Staff Writer

With 19 domestic auto assembly plants working extra hours last week, U. S. auto makers slated production of 179,722 units, down 1.20 percent from the prior week's output of 181,909.

Last week's total was a healthy 38.61 percent improvement over the 129,657 produced in the year-ago week.

The 1984 production total climbed to 1,815,063 units, up 42.97 percent from 1,269,562 autos built in the comparable period last year.

Breakdown for the week by company was: General Motors, 56.71 percent; Ford Motor Co., 22.31 percent; Chrysler Corp., 15.61 percent; American Motors, 2.67 percent; Honda, 1.39 percent, and Volkswagen of America, 1.31 percent.

Facilities working two Saturday (March 17) overtime shifts at GM were Flint (B, D and G lines), Detroit, Arlington (Tex.), Doraville (Ga.), Lordstown (O.) and Oklahoma City.

Eight Ford facilities put in extra daily hours. They were: Atlanta, Chicago, Edison (N. J.), Kansas City, Lorain (O.), St. Louis, Wayne (Mich.) and Wixom (Mich.).

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two 9-hour daily shifts while Jefferson (Detroit) worked two 8½-hour daily shifts. All five plants were scheduled to work two 8-hour Saturday shifts.

Computer age has arrived for ads, Edsel Ford says

Continued from Page 4

Hispanics are some of the groups his company is trying to attract. "We're trying to attract some of the more influential contemporary groups," he said.

"We now have unique and creative Hispanic TV commercials and this is a first for the auto industry," he said. These commercials will be aired in cities like San Antonio, Miami and Los Angeles, he added.

Ford also said, "We have hired an excellent black ad agency in Chicago. It's Burrell. We have asked them to create unique TV commercials for the black market."

Ford said his company listens carefully to women and added, "There is a women's committee in Dearborn which reviews our products. We're building our products to appeal to women drivers."

Asked about his future at Ford Motor Co., Ford said, "I really don't have time to think about that right now. I very much enjoy my current career path since I consider myself to be a good marketing person and love to be with dealers. If I had my druthers, I'd make my career in sales and marketing."

Volvo Canada recalls 1,900 cars

WILLOWDALE, Ont.—Volvo Canada, Ltd., has announced two recall campaigns affecting approximately 1,900 cars in Canada.

Turbocharged GLT models built from 1983 to 1984 will be recalled to reroute an alternator wire which, as originally positioned, could be pushed into contact with the turbo heat shield during servicing, shorting the wire and melting or burning the wiring harness. Approximately 1,400 cars in Canada are involved.

About 490 Volvo 760-GLEs of the 1983 model year are being recalled for the correction of a brake warning valve design which could result in a loss of brake fluid without the warning light coming on. Correction consists of replacement of the valve end plugs or, if leakage has occurred, replacement of the entire valve assembly.

Truck production continues strong; 63,582 assembled

Domestic truck production last week remained at about the same level as the previous week.

The truck makers slated assembly of 63,582 units, down 822 from the previous week's 64,404. The output led the year-ago tally of 45,649 by 39.29 percent.

Extra hours were worked at 10 truck plants last week.

At General Motors, Lordstown (O.) worked two Saturday (March 17) shifts while the Detroit truck and bus plant added one Saturday shift.

Ford Motor Co. scheduled extra daily hours at all six of its truck plants.

Nissan's Smyrna (Tenn.) facility continued to work additional daily hours last week. The extra daily production will continue through March.

Chrysler Corp. scheduled two nine-hour daily shifts at its Warren (Mich.) facility.

Canadian makers steady for week with 23,336 cars

Canadian auto makers slated production of 23,336 units last week, 37 less than the previous week's 23,373 and 1.33 percent better than 23,029 assembled in the year-ago week.

So far this year, the manufacturers have built 233,128 cars, leading the 1983 total of 202,247 by 15.27 percent.

Truck production last week was targeted at 12,483, down 167 units from the previous week's 12,650 and 14.85 percent better than the 10,869 trucks built in the year-ago week.

American Motors' Brampton (Ont.) facility was down last week for inventory adjustment.

Chrysler Corp. estimated production of 2,364 Dodge Caravans, 2,196 Plymouth Voyagers and 912 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 44,816.

Japanese group picks Kansas City for headquarters

JEFFERSON CITY, Mo. — Missouri Gov. Christopher Bond has announced the selection of Kansas City as the site of the first U.S. office of the Japan Chamber of Commerce and Industry (JCCI), representing 479 local chambers.

JCCI is accociated with the Ministry of International Trade and Industry.

According to Hiroshi Ikawa, senior managing director, the Kansas City office will promote and coordinate investment of medium and small enterprises in this country.

Bond said, "The state is pleased with the decision of the Japanese chamber to locate in Missouri since JCCI's primary responsibility is to work with small-and medium-size Japanese companies to investigate direct investment opportunities in the U. S."

Chrysler bares '85 H-bodies at fleet affair

LOS ANGELES.—Fleet managers were given a sneak preview of Chrysler Corp.'s upcoming H-bodies during the National Assn. of Fleet Administrator's convention here last week.

Called Dodge Lancer and Chrysler Commander, the cars will bow in 1985 and will be positioned against General Motors' A-cars and Ford Motor Co.'s LTD/Marquis series. The Dodge entry will be pitted against Chevrolet Celebrity/Pontiac 6000 and LTD/Marquis. The higher line Chrysler will go against Oldsmobile Cutlass Ciera and Buick Century and LTD Brougham/Marquis Brougham.

The new H-body rides on a 103.1-inch wheelbase and is powered by Chrysler's 2.2-liter, four-cylinder engine. Turbocharged versions of the engine featuring port injection will be optional in both lines.

The car will be offered in one body style only, a five-door hatchback, although the hatch is notched so that the car looks more like a traditional sedan.

Standard equipment includes a five-speed manual transaxle, power steering, AM/FM stereo radio with four speakers, full instrumentation and power front disk/rear drum brakes.

The front-wheel-drive car has an overall length of 180.4 inches, width of 68.5 inches and curb weight of approximately 2,700 pounds. Cargo volume is 19.3 cubic feet with the rear seat up and 40.7 cubic feet with the seat folded down. The fuel tank holds 14 gallons.

High-line versions of the Dodge will be designated Lancer ES, while the Chrysler models will carry the Commander LS nameplate.

Chrysler's new H-body

Five-door hatchback due in 1985

Chrysler Corp. unveiled its H-body Dodge Lancer and Chrysler Commander last week at National Assn. of Fleet Administrators' convention in Los Angeles. The new H is powered by a 2.2-liter four, with turbocharging and port injection optional. Wheelbase is 103.1 inches. The five-door hatchback will bow as a 1985 model.

U.S. model count climbs to 305 as GM C-cars bow

By John K. Teahen Jr.
Managing Editor

Buoyed by mid-year introductions, the number of models offered by domestic auto makers has again crept above 300.

An Automotive News tabulation finds that 305 built-in-America cars will be in the showrooms for the spring selling season. That's up a bit from the 298 at the end of the 1983 campaign.

Two years ago, the domestic manufacturers had 307 selections. That is the only other time since 1975 that the total has exceeded 300.

The current 305 choices compare with 288 at the beginning of the 1984 model year last fall, and General Motors is responsible for nearly all of the increase.

GM has added 13 models. They are the long-awaited and much-delayed front-wheel-drive C-body cars from Buick, Oldsmobile and Cadillac. They were supposed to arrive last fall, but a variety of quality and production problems have kept them off the market until the now-firm date of April 5.

Joining the lineup on that date will be six Buick Electra and Electra Park Avenue selections, four Oldsmobile Ninety-Eight Regency and Regency Brougham choices, a pair of Cadillac DeVilles and a Cadillac Brougham.

Also new to the scene since last fall are a Mercury Lynx

Suit could involve $1 billion

Class action filed on X-car brakes

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A class action — potentially involving as much as $1 billion — against General Motors over allegedly defective brakes in some 1.1 million 1980 X-body cars has been filed in Federal District Court here.

Judge Thomas P. Jackson, the same judge now sitting in the pending trial between the government and GM over the '80 GM X-body alleged safety defect, has been assigned to this private class action.

In addition, plaintiffs from an earlier class action involving the same issues and filed against GM in Savannah, Ga., may be added to the case here after being dismissed in the Georgia court.

GM's chief lawyer, Thomas A. Gottschalk, responding to news of the new class action, said: "By the time we have completed our presentation in this case, X-car owners will be assured that the cars are among the safest on the road."

GM blames NHTSA and the Center for Auto Safety for the adverse publicity, according to Gottschalk.

"Ironically, it is the publicity generated by NHTSA that caused the damage to the X-car's reputation in the first place," he said.

• "The law does not permit recovery for self-inflicted wounds," Gottschalk added. "In this case, the Center for Auto Safety is the one who inflicted the damage by stimulating the headlines that blemished the X-car's reputation. It is like Ralph Nader suing for damages he suffered due to the bad publicity his Corvair received."

The private class action, known as Joseph A. Alberti, et al, v. GM, was filed by Arnold and Porter, one of Washington's most prestigious law firms. It names 127 plaintiffs from various states who bought a new X-body car.

The class action filed in Savannah last Aug. 5 — where the class had not yet been certified and where GM was contesting jurisdiction — is now being transferred to the District of Columbia where its attorney, Guerry R. Thorton Jr., feels it will have a better chance.

The Arnold and Porter class action charges GM with "willful and deceitful breaches of its written warranties and implied warranties of merchantability and fitness" in selling the X-bodies in violation of the Magnuson-Moss Act.

Because of a "fundamental design defect," said the complaint, the rear-wheel brakes tend to lock up prematurely "causing or risking the loss of control of the vehicle."

The "design defect," it said, was known to GM but not disclosed at the time of purchase and thereafter GM and its representatives "affirmatively concealed" it for several years.

Damages are being claimed because the cars have far less value "both because of the serious and probably incurable defect in the brakes and because as a result of this now widely known defect, the vehicles have a substantially diminished resale value."

The complaint uses 10 plaintiffs as representative of the class.

These are: A bank vice president from Greenvale, Wis.; a psychologist from Ann Arbor, Mich.; an electrical engineer from Cherry Hill, N. J.; a CPA from Hazlet, N. J.; an attorney from Westport, Conn; a professional driver and salesman from Keene, N. H.; an engineer from Great Falls, Va.; an attorney from Washington; a Gallaudet College counselor from Hyattsville, Md., and an employe of AT&T from Garland, Tex.

The charges are basically the same as those used by the Justice Department in its suit against GM: That GM refused to be delayed by — and in fact, actually conceal[illegible] — serious safety problems in its eagerness

Plymouth Caravelle to succeed Chrysler E Class

LOS ANGELES.—Chrysler Corp. will replace the Chrysler E Class sedan in the 1985 lineup with a lower priced Plymouth model called the Caravelle, which will be marketed as a sister model to the Dodge 600. The company will continue to position the FWD New Yorker in the spot vacated by the E Class model.

Porsche family ponders stock buyout

STUTTGART, West Germany. — As Automotive News went to press, it appeared that Porsche family members who own Porsche AG were prepared to make a decision on whether to buy the 9.5-percent interest in the company held by Louise Piech, granddaughter of the founder. The holding is valued at about $40 million, and the family has the

DeVille goes front-wheel drive

Cadillac's downsized, front-wheel-drive Coupe DeVille is set to go on sale April 5. At 195 inches overall, the new model is 26 inches shorter than its rear-drive predecessor. Wheelbase, which is 110.8 inches, has been cut 10.7 inches. Stories and other pictures on Page 64.

$75-million deficit for '83

GM reports red ink for non-auto operations

By Kathleen Hamilton
Financial Editor

General Motors sprinkled its annual report with historic photos and line drawings appropriate for a company that celebrated its 75th anniversary in 1983, but there's little doubt that stockholders will enjoy at least as much the gray figures that showed record sales and earnings.

The annual reports are being mailed to 984,000 shareholders in preparation for the annual meeting, to be held at 9 a.m. Friday, May 25, in the Fisher Theater, across the street from GM headquarters in Detroit.

The annual report shows GM lost money on its non-automotive operations for the second year in a row. Back in 1981, all GM's profit came from its non-automotive operations.

Last year, GM lost about $75 million on its non-automotive operations, compared with about $10 million in 1982.

Non-automotive sales accounted for 4 percent of sales last year, or about $3 billion.

In 1982, GM's non-automotive sales were $3.6 billion, or 6 percent of total sales.

The annual report also showed GM lost about $336 million overseas last year, compared with about $77 million in 1982 and $326 million in 1981. Overseas sales last year accounted for 13 percent of GM's total sales, or $10 billion. That was about the same as in the two prior years.

Of $4.01 billion in capital spending last year, 78 percent was made in the U. S., 7 percent in Canada and 15 percent overseas. In 1982, capital spending of $6.21 billion was split this way: 73 percent in the U. S., 5 percent in Canada and 22 percent overseas.

Management said it anticipates capital spending of about $6 billion this year.

In their letter to stockholders, Chairman Roger B. Smith and President F. James McDonald said GM's earnings level "remains below the level of capital generation required for successful operations over the long term."

They cited 1983 earnings equal to 5 percent of sales, comparing it with the 10-percent rate of the early 1960s. Nevertheless, the 1983 ratio was a significant improvement over earnings that equaled 1.6 percent of sales in 1982 and 0.5 percent of sales in 1981.

GM generated enough cash last year to reduce its long-term debt by $1.31 billion, bringing the year-end level to $3.14 billion.

GM also had enough money to tell GMAC to delay $2.56 billion worth of floorplanning payments at year's end. The effect was to allow GMAC to borrow from the parent company rather than from outside sources.

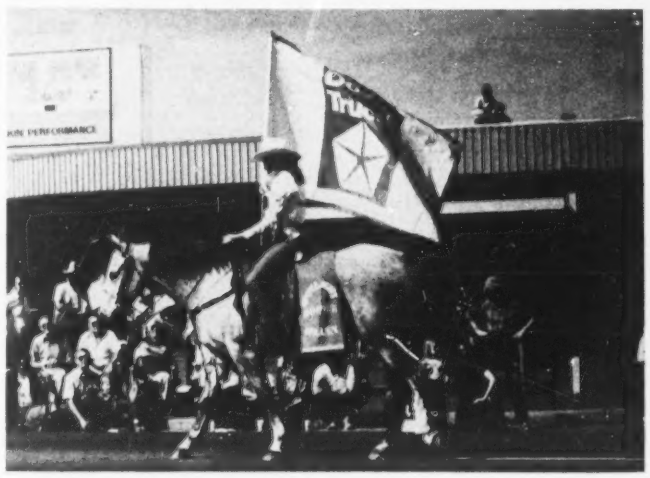
GM's computations on the effects of inflation show its 1983 record sales of $74.58 billion would be worth only $24.99 billion in constant (1967) dollars. If that were the case, 1979 sales — reported at $66.31 billion — would have topped last year's performance. They were worth $30.50 billion in constant dollars.

A similar discounting of last year's record profits of $3.73 billion would have occurred. GM pegged actual value at $1.20 billion, in which case 1978 profits would have been better: Reported at $3.51 billion but worth $1.38 billion in constant dollars.

GM employed an average of 691,000 persons last year, compared with 657,000 in 1982.

Michigan Blue Cross and Blue Shield of Michigan was the corporation's largest single supplier.

GM's pension expenses last year were $1.71 billion, up from $1.57 billion in 1982.



Horsing around to sell cars

Spotlight Dodge, Phoenix, advertised via a horse in the Rodeo of Rodeos Parade. More than 100,000 parade watchers saw the horsewoman with her Dodge advertising pass by in addition to more thousands viewing on TV.

Labor document 'drips of jointness,' GM labor VP says

Warren discounts impact of leak

By Michelle Krebs
Staff Writer

ANN ARBOR. — A bargaining document, leaked to the UAW and the press a month ago, should not prompt union members to distrust General Motors, according to GM's chief negotiator.

"I don't know what's in there not to be trusted," said Alfred S. Warren Jr., industrial relations vice president. "It drips of jointness . . . All of those were joint kinds of things."

The document indicates GM's desire to eliminate annual raises and cost-of-living adjustments, replacing them with profit sharing.

The document had been distributed to an October meeting of GM's personnel directors. It chilled the relationship between the union and the auto maker when it made its way into the hands of union members and the press.

However, Warren said at the U. S.-Japan Automotive Industry Conference at the University of Michigan last week, that the document should be viewed as the company's alternatives.

"It's a strategic planning document, and it's no different than any other strategic planning document," Warren said.

"People assume that in the people side of business, you don't do strategic planning. You do it in engineering. You do it in design. You do it in sales. Why wouldn't you do it in personnel?"

Warren denied that references made to UAW Vice President Donald F. Ephlin, head of the GM Department, hurt the union leader's standing among UAW members. Some union members said the document implied that GM thought it controlled the UAW by controlling Ephlin.

"I think the attitude a union leader has to be mad at me all the time is probably not too realistic in today's world," Warren countered.

• UAW President Owen Bieber, also speaking at the conference, said the automobile industry will lose 340,000 jobs by 1990 without a strong public policy that includes a domestic-content law.

Bieber acknowledged that even with a domestic-content law, the number of jobs would drop to 735,000 by the end of the decade. Auto industry jobs today total about 840,000.

"The auto industry's market share and employment may continue to decline," he admitted, "but only slowly and predictably as part of a managed process."

However, without such a law, Bieber predicted the number of jobs would fall to 500,000, about half of the jobs of the 1978 boom year and 200,000 fewer than the 1982 trough.

He estimated that the imports' share of the sales pie would be 40 percent while 20 percent of the parts for vehicles assembled in the U. S. would be from abroad.

"The upper Midwest becomes a vast welfare client and a drain on the nation's resources (without a policy)," he said.

Nevertheless, domestic-content legislation, pending in Congress, faces stiff opposition, particularly from the Reagan Administration.

The legislation, which requires a certain percentage of U. S.-built parts for vehicles sold in this country in large volumes, has been introduced twice in Congress. It has passed the House of Representatives both times, but has yet to be put to a vote in the Senate.

Michael A. Driggs, deputy assistant secretary for Automotive affairs and consumer goods at the U. S. Department of Commerce, warned that protectionist policies would cause new-car prices to rise.

"The consumer never benefits by protectionism," Driggs said.

Driggs also said that the question of voluntary export quotas on Japanese cars shipped to the U. S. remains open, despite Commerce Secretary Malcolm Baldrige's recent statement that quotas should be removed.

The voluntary restraints expire April 1, 1985.

Firestone to divest business of steel, foam, restraints

AKRON. — At a meeting after the company's annual meeting here, Firestone Tire & Rubber Co. directors approved a plan to divest the corporation's steel products, foam products and passenger - restraint - systems businesses.

Firestone Steel Products Co. has sales that currently approximate $230 million annually. It has headquarters in Henderson, Ky., and manufactures medium- and heavy-duty truck wheels and rims.

Foam products' sales currently approximate $100 million annually. That activity produces polyurethane foam for sale in the automotive and housing industries. It is based in East Providence, R. I.

Passenger - restraint systems are manufactured by Firestone Industrial Products Co. with headquarters in Washington, Mich. Restraint-systems sales currently approximate $120 million annually.

Firestone single-ply roofing, air springs, tank trucks and molded products are not affected by the divestiture plan.

• Firestone's directors also authorized the open market purchase of an additional 5 million shares of Firestone's common stock. The board previously had authorized two 5-million-share purchase programs under which 8.8 million shares have been purchased to date.

Firestone's directors elected Leon R. Brodeur and Jay H. Rosenson vice chairmen of the corporation.

Brodeur has been president of the company and Rosenson has been an executive vice president of the corporation and president of Firestone's corporate development group, which has been disbanded.

In his new post, Brodeur will be responsible for the world tire group and for Firestone Industrial Products Co.

Until their divestiture, Firestone Steel Products and Foam Products activities will report to Rosenson as will the sales and service group, which previously had been designated the sales and marketing operations group.

John J. Nevin, chairman and chief executive officer, is assuming the additional title of president.

Lynx diesel driveaway

More than 200 Lincoln-Mercury dealers and salesmen from the Los Angeles sales district marked the arrival of the first Lynx diesel models in California with a 31-car driveaway program at the Queen Mary/Spruce Goose complex in Long Beach. They heard a presentation on the Lynx diesel's key selling points—including fuel economy ratings of 46 MPG city and 63 MPG highway.

Farmer and Hiller head Chrysler assembly plants

DETROIT.—Forest J. Farmer has been named manager of Chrysler Corp.'s Sterling Heights (Mich.) assembly plant, and Timothy J. Hiller has replaced him as manager of the Newark (Del.) assembly plant.

Hiller formerly was manager of the Clairpointe preproduction plant in Detroit.

Ogle Design looks to the future

All Tom Karen needs now is $750,000

By Richard Feast
European Editor

Tom Karen hopes he can succeed now where he failed a decade ago. He believes his Ogle Design firm's Project 2000 is the shape of passenger cars to come.

The vehicle is light, aerodynamic and has good interior space. Above all it is stable at road speed, which a number of current generation low-drag cars are not. Karen has gone for a "single box" shape with square back, arrowhead front and careful attention to underbody airflow.

What Karen needs to take it beyond the model stage is $750,000. But with the vested interest of in-house design studios, the low esteem for good design in his country and the scant worldwide regard for Britain as a design center to match Italy, his prospects of attracting the finances are poor.

Still, Britain's product design education system is well regarded. The Royal College of Art's auto design courses attract students from around the world — Europe, the U. S., Japan. Many former students now hold key positions in major auto companies. Carl Olsen, a former Ogle design director and visiting RCA lecturer, is head of Citroen styling.

Ten years ago Karen was banging the gong about another car concept. It was the tall, square-backed look, now in vogue on cars such as Chrysler Voyager, Honda City, Nissan Prairie and Fiat Uno. None is a product of Ogle Design.

This has led to Karen's conviction that while auto makers have talented design people, they are weak at concepts such as Project 2000. In addition, he believes most of today's car interiors are poorly designed.

Project 2000 is conceived as a four-seater with front-drive and automatic CVT. The windshield is gently v-shaped in plan form, borrowing from current aircraft practice. In the MIRA wind tunnel, the three-eighths scale model recorded a drag factor of 0.26 without any special treatment of problem areas such as wheel arches.

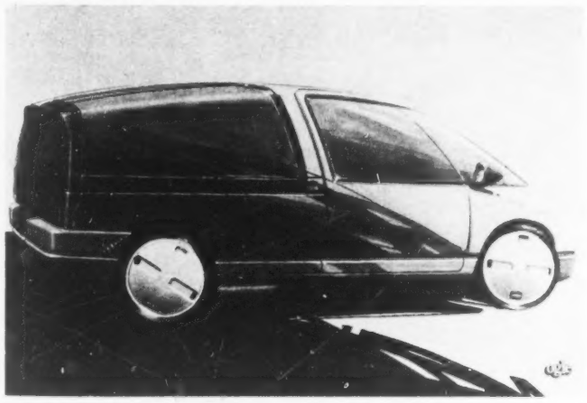
The shape is clean, devoid of added-on spoilers and wings. But the main advantage, Ogle believes, is stability. At a 20 degree yaw angle — equivalent to a fairly stiff crosswind at 70-MPH — Project 2000's drag coefficient is less than 0.3. There is little body lift at the front, though back-lift increases to a level closer to that found in contemporary body shapes.

Stability will become more vital, Ogle believes, as car weights come down in pursuit of better fuel economy. The mileage marathon by auto makers already has led to cars with very good drag factors on a head-into-wind basis, but the same cars suffer badly when subjected to side winds.

Ogle has opted for a conventional seat arrangement rather than the lounge layout proposed in some forward-looking designs. Says Karen: "You have to accept that people have become used to the two-plus-two layout during the last 80 years, and no designer is going to make them shift to something less convenient now."

Some of Ogle's sponsorship for Project 2000 has come from Letchworth Carden City Corp., in the Hertfordshire town where the company has been located for the past 30 years.

Project 2000 will be displayed at Drive Forward, an exhibition of British automotive and aerospace design projects staged at London's Design Center, March 26-May 12.



A sketch of the Ogle Design Project 2000 passenger car which will be shown at the Drive Forward exhibition at the Design Center, London, starting March 28. The four-passenger vehicle has a low drag coefficient, and is said to be extremely stable at high speed. Managing director Tom Karen believes auto makers' obsession with low drag figures is creating cars which are unstable in side winds.

Peugeot finances Talbot

Coventry plant will produce C28

By Richard Feast
European Editor

The decision by the Peugeot Group (PSA) to invest $30 million in its Talbot Motor Co. subsidiary has eased fears about the future of the UK company within the French group.

Given PSA's enormous overall problems, Talbot always looked like a possible casualty. PSA insisted the Coventry (England) company was part of its overall European strategy, and the new investment is confirmation of this.

The money will be spent to introduce a medium-range model, known as C28, in the final quarter of next year. But Coventry will be used only as a satellite plant for C28, a model which could be built as a Peugeot or a Talbot.

The main C28 volume will be produced at Poissy, the former Chrysler plant near Paris which is capable of turning out 1,000 cars a day. A major investment — held up during the bitter strike earlier this year—of $145 million is being put into Poissy to introduce C28.

What is not yet known is just which models C28 will replace — as surely it must, given the group's surfeit of products and the insistence by PSA President Jean-Paul Parayre that it is reducing variety to just four basic chassis.

Two of those four chassis have appeared, on the Peugeot 205 and Citroen BX. The understanding is that C28 will be in the medium-range category, which means it could be a more conventional derivative on the BX plaatform.

If so, over the long term it could mean the demise of products like the Talbot Horizon, Solara and 1510.

Peugeot officials in Paris suggest that C28 will be a lower-volume model than the 205, soon to be built at a rate of around 1,600 a day at Mulhouse (1,000), Poissy and Villaverde, Spain, (300 each).

Talbot Motor Co. made a marginal profit of $2.2 million in the first half of last year. The sum was insignificant, but the development was: It came after a decade of financial losses.

A key factor was the resumption of exports to Iran, where nearly 90,000 Hillman Hunter KD kits are assembled locally as the Paykan each year.

Other factors which pursuaded PSA to make the investment include much improved productivity, a low level of production disruption compared with the old Chrysler days and a desire to be regarded as a local manufacturer in a market worth around 1.7 million units annually.

Volvo profit

Sales climb 17 pct.

HELMOND, Netherlands. — Volvo Car B.V. earned a pre-tax profit of about $5 million in 1983, its first profit since the Swedish Volvo Car Corp. took a minority interest in the firm, according to preliminary figures.

In 1982, the Dutch car maker reported a pre-tax loss of about $5 million. Sales in 1983 rose 17 percent to $513 million. Unit sales rose 13 percent to 102,000.

C. B. van de Panne, former chairman of the NKF Group management board, and Roger Holtback, new president of Volvo Car Corp., were named to the Volvo Car B.V. supervisory board, succeeding E. van Veelan and L. Jeansson, who retired.

Japan sets European mark

Tops million car sales in 1983

Japan's auto makers shipped a record number of vehicles to Europe last year. The increase was reflected in the number of new Japanese passenger cars registered on the continent — more than one million for the first time.

The matter is of concern to established European manufacturers. Many have benefited from national trade barriers (in Italy, France, the UK and Spain, for example) only to face stiff Japanese competition in their old export markets.

The European volume increase by the combined Japanese was 151,200, or 13.5 percent to more than 1.27 million. Most of that expansion was absorbed by the European Economic Community, with West Germany, the UK and Holland absorbing most of the extra 139,100 units.

The previous best year for the Japanese in Europe was 1980 when nearly 1.23 million vehicles were shipped, including 913,600 to the EEC.

Statistics from JAMA indicate that the country's exports last year rose by 1.4 percent to 5,669,500, still below the all-time high of more than 6 million achieved in 1981.

Besides Europe, Japan's improvements were to North America (an additional 150,300), Central America (28,100) and Asia (19,000). There were declines in shipments to the Middle East (86,800), Africa (80,900), South America (53,200) and Oceania (48,700). In balance, the country exported an additional 79,000 units of all types in comparison with 1982.

The U. S. remained by far the most important export market for Japan. A 6.1 percent increase took the 1983 total to more than 2.23 million, still behind the 1980 record total of slightly over 2.4 million. But it still means that the U. S. absorbs two out of every five Japanese vehicles exported, and one out of every five produced.

In a ranking of export markets by national importance, Saudi Arabia is firmly second behind the U. S., despite a volume drop of about 51,700. Strong demand in Germany lifted the country above Australia to third, and in a similar fashion the UK moved ahead of Canada as the fifth most important destination.

Japanese exports as a proportion of total production continued to fall. The country made in excess of 11.11 million units in 1983, and exported 51 percent of them. In 1981, when it hit its best ever volume of almost 11.18 million, the export share was more than 54 percent.

Last year's performance is to some extent explained by the rise in demand in Japan. Registrations were up for the third year in a row, and stood at more than 5.38 million.

Industry at crossroads

Japanese auto makers face challenges

Japan's auto industry is at a crossroads, says a report from the Economist Intelligence Unit.

Western vehicle makers are responding vigorously to the Japanese challenge, and will be helped by a movement toward protectionism as governments seek to protect their domestic auto industries.

The choices facing Japan are examined in the report, entitled "The Japanese car industry: Where now in the 1980s?" Among the main conclusions is that Japanese producers may be forced into making more assembly investments inside protected areas if they are to maintain or enhance their current position.

EIU believes there is clear evidence that the market share of fully assembled Japanese cars is approaching a ceiling in North America and western Europe, and that quotas or other forms of restriction on supply will remain throughout the rest of this decade.

With increasing protectionism in western markets, Japanese auto companies are placing greater emphasis on larger markets elsewhere such as Indonesia, Brazil and South Africa. But the nature of this interest is likely to change markedly in the 1980s, with more use of KD kits and some degree of local assembly taking over from exports of finished products.

EIU identifies growth in joint-production relationships which offer a number of advantages over establishment of entirely new facilities on an independent basis. These include lower capital costs, more rapid project completion, access to the partner's technology, risk sharing and an easier way out if the project is unsuccessful.

"Mergers between Japanese car producers are unlikely," says EIU. "They would be contrary to the spirit of independence and rivalry which exists in the industry and would not lead to any marked advantages."

The authors think fierce competition for sales inside Japan will continue.

Conditions of supply are likely to be dominated by a relentless search for cost-cutting through robotization and other technological changes. But the diminishing scope for useful redeployment of displaced employes may act as a constraint on this automation process by the middle of the decade, says the report.

Pumping up Porsche

Major programs expand production

By Richard Feast
European Editor

Porsche built 48,300 high-priced sports cars in 1983, one-third more than in 1982.

But that wasn't enough. The West German auto company is now building a new paint plant at its Zuffenhausen, Stuttgart, headquarters to relieve a production bottleneck.

When the plant gets going toward the end of 1985, it will lift daily output by 25 percent, and will enable Porsche to run two shifts to produce "well over 100 cars a day," according to management board member Rudi Noppen.

At present, Porsche is building 81 units a day at Stuttgart, about 50 of which are 911 series and the remainder the 928. This is a substantial increase over the 71 a day produced last year. The increase was made possible by the elimination of various bottlenecks, and introduction of a new component handling system including Japanese-style just-in-time deliveries for certain components.

The cramped quarters at Zuffenhausen will be further altered this year by construction of a modern customer collection center. It will be finished in the fall. Forty percent of Porsche's West German customers — and a good many from the U.S.—pick up their cars from the factory.

Over the longer term, Porsche's five-year plan is expected to see construction of a new body shop. It is the next major project after the paint shop, and will further smooth the production process without making concessions in quality control.

The company will invest around $90 million a year over the next few years. The distribution shake-up announced in the U.S. was to account for much of that, but spending on plant and facilities was earmarked for an equally large chunk.

Money will go into product development, but the understanding is there will be no all-new models. The policy of continuous development, epitomized by the long-running 911 series, will result in "more perfect" Porsches, but they could have four-wheel-drive and even use plastics for some body components.

Noppen says the new paint shop will not only raise volume, but will give the company more flexibility, with the possibility of producing more opalescent versions.

It will use robots in the underseal area, but with relatively small volumes, and four models built in two locations, the scope for production automation at Porsche is at present limited. Robots can be used in materials handling, and certain milling and welding jobs, but, according to Noppen, "There is no technique that is as flexible as a well-motivated crew."

In addition to 911 and 928 production at Stuttgart, Porsche subcontracts 924 and 944 assembly to Audi at Neckarsulm. They are currently being produced at a rate of 134 a day; three-quarters are the more expensive 944 equipped with the company's four-cylinder engine.

Noppen says production records show that no two models the same are produced within any two months. The 911 is now available as coupe, cabriolet, targa-top and turbo. The company offers 200 body colors and as many as 350 different seats.

Given Porsche's low in-house manufacture — 70 percent of components are bought — the need to improve materials handling was apparent. It built a multi-story storage and parts warehouse at the headquarters, connecting it to final assembly via an underground tunnel. Driverless trolleys move from the warehouse, where components are picked by computer, to arrive at the assembly line at the correct time.

In the last few months, Porsche has arranged for seat deliveries from Recaro to be made three times daily. This eliminates the need for large stocks of components which can easily be damaged in handling. It is an example of the kanban principle successfully applied by a small-volume maker.

Noppen is responsible for much of the quiet revolution taking place at Porsche. He joined the company in 1982 from Klockner - Humboldt - Deutz where he was head of logistics and production strategy. His Porsche appointment pulled together several previously separate functions.

His role at Porsche may be unique in the industry in that it combines responsibility for production, quality control, purchasing and logistics. He believes that with a trend, even among large-volume makers, toward flexible manufacturing, greater interest will be shown in the Porsche system.

Privately owned Porsche recently revealed its best ever financial results, following a small decline in the early 1980s.

In its financial year ending last July, it recorded a 43 percent increase in sales to DM 2.1 billion ($766 million), and 85 percent increase in profits to DM 69.6 million ($25.4 million) and a 39 percent sales increase to 44,800 units.

Reporting the results, finance director Heinz Branitzki said the Porsche and Piech family shareholders may consider stock exchange sales within five years.

Nordic cooperation

Group chosen to get things started

By Stig Bjorklund
Staff Correspondent

STOCKHOLM, Sweden. — Volvo President Pehr Gyllenhammar has once more taken on the task of trying to launch industrial cooperation among the Nordic countries.

He has selected a small, independent group of business people from Sweden, Norway, Denmark, Finland and Iceland to get things started.

Prime ministers of the countries involved, recently gathered at a Nordic Council meeting in Stockholm, have officially welcomed the idea and declared they look forward to studying results from the Gyllenhammar Group's work.

Guidelines for Nordic industrial cooperation have been in existence for many years, the latest ones dating from December, 1981. In practice there has, in fact, been nearly nothing established.

One of the few positive examples is Volvo, which has tried to keep up Swedish-Norwegian cooperation after the failure of the big Volvo-Norway deal in 1979, when Volvo shareholders stopped Gyllenhammar's project of letting Norway buy 40 percent of the Volvo Group.

In exchange for Volvo Energy having a chance of drilling for oil off Norway's coast, Volvo has taken on a number of Norwegian component suppliers. In the important Light Component Project recently revealed by Volvo, Norwegian aluminum and magnesium technology played a major role.

An even more outstanding example is, of course, the Saab-Valmet project, in which Saab cars are being assembled at a joint-venture plant in Western Finland. This does not, however, alter the general picture of industry being fairly slow to follow governmental advice to expand within the Nordic region.

Composite sale

Insulation Equipments Ltd., Shropshire, UK, has received $1 million worth of orders from U.S. companies for a new composite material called Malaform. IEL says the new development provides "the answer to the problems of meeting modern design requirements for compound curving decorative-faced components which achieve advanced fire safety standards."

The material is a fiberglass-reinforced resin with a decorative coating, applicable for fire-resistant paneling, air conditioning, ducting, window and door surrounds, engine covers, bulkheads, end caps, seats and seat-cover moldings. Among IEL's North American customers is Budd Co.

Time for makers to push for containment law, he says

Bieber asks aid on health-care costs

By Marjorie Sorge
Labor Editor

The UAW, not the auto companies, has led the way for health care cost containment in the U. S., and it is time those companies joined the union in pushing for national legislation to lower that cost, UAW President Owen Bieber told the Economic Club of Detroit.

"The UAW had to drag the companies kicking and screaming to major actions to curb health care costs," Bieber said. "And now these Johnny-come-latelys want to take the credit and give the workers the blame."

He said the companies "are screaming like stuck pigs for concessions on that front (health care). But the workers aren't responsible for skyrocketing health care costs, and they shouldn't be asked to bear the burden."

His audience included not only benefits people from each of the Big Three, but also Howard Kehrl, General Motors vice chairman, who sat next to Bieber on the dias, and Peter J. Pestillo, Ford labor relations vice president, who also sat at the head table.

Those people were especially interested in what Bieber had to say about bargaining terms in this year's contract negotiations. He told them the UAW would not agree to co-pays and deductibles because they "merely shift the cost from the insurer to the patient." And, he said, it will not result in a cost savings.

UAW contracts with Ford and General Motors expire Sept. 14. The Chrysler agreement ends Sept. 14, 1985.

Bieber said he is optimistic and believes the UAW and the Big Two can reach an agreement this year without a strike.

Both sides have already hinted that health care costs will play a major role in this year's bargaining. Bieber blamed the soaring costs on the providers.

He said the hospitals are overbuilding and over-bedding; that hospitals pass on to third-party payers all increases in cost; that over-utilization of medical procedures is provider-generated, and that the providers are charging whatever the market will bear.

"Whether at the national level or in bargaining, we've got to focus not on the consumers of care but on the system and the providers of care who are the real decision-makers," he said.

According to Bieber, the only long-term answer is a universal National Health Insurance which the auto companies have not yet supported. He urged them to support the Kennedy-Gephardt Bill and the C-H-E-C Cost-Containment Bills now in Congress. Those bills are aimed at reducing health care costs.

In a press conference before his speech, Bieber also challenged auto industry leaders to sit down with the providers and find ways to cut costs. If that is done, he said, he will form a panel of his counterparts and all three could sit down together and try to work it out.

Hayes to return to Ford Europe as vice chairman

DEARBORN — Walter Hayes, 59, will return to England June 1 as vice chairman of the board and a director of Ford of Europe, Inc.

That is the position he held before coming to the U.S. in 1980 as public affairs vice president of Ford Motor Co. Hayes' successor in the U.S. post has not been announced.

At Ford of Europe, Hayes will be responsible for external affairs with emphasis on public and governmental affairs and European motor sports. He will continue as a vice president of Ford Motor Co.

Hayes joined Ford of Britain in 1962, became a director in 1965 and was named public affairs vice president for Ford of Europe in 1968. He was promoted to vice chairman in 1976 and was elected a vice president of Ford Motor Co. in 1977.

He was a director of Ford Advanced Vehicles, Ltd., the company formed to build the Le Mans-winning Ford GT40.

Riegle attacks Baldrige for stand on quotas

WASHINGTON — Senator Donald Riegle, Michigan Democrat, has blasted Commerce Secretary Malcolm Baldrige's recent statement that Japanese car imports should not be restricted for a fifth year.

The fourth year of restraints expires April 1, 1985.

"I predicted that if reelected in November, President Reagan would then completely open the floodgates for Japanese auto imports," Riegle said in the Congressional Record.

"I am sorry to say that recent comments by Secretary Malcolm Baldrige tend to support that prediction."

Every industrialized Western nation has a tougher policy on Japanese car imports than the U. S., according to Riegle.

• While the Administration appears willing to blindly pursue free trade, it has been far from aggressive with regard to fair trade," he said.

"Japanese tax policies, a costly yen-dollar imbalance and an assortment of non-tariff barriers continue to make it virtually impossible for the American auto industry to compete with the Japanese on an even footing."

Baldrige made his comments on the Japanese restraints earlier this month to a group of reporters, adding that he was expressing his personal opinion.

Riegle included in his statement a letter to Baldrige from Chrysler Chairman Lee Iacocca, urging the Commerce Secretary to reconsider his stand on the matter.

"The continuation of such restraints is absolutely essential until our government takes those steps which are necessary to provide a level playing field in Japanese-U. S. trade relations," Iacocca said in his letter.

The current U. S. auto trade deficit with Japan is $15 billion, he added, and will go to $30 billion within two years if voluntary restraints are canceled.

House subcommittee debates air-bag price and volume

Continued from Page 4

million could produce modules at the rate of one million a year. The manufacturing cost (sensor/initiator at $5 plus gas generator at $15 plus air-bag cover/mounting plate at $8 totals $28) including a 15 percent manufacturing profit comes to $32. Adding a 30 percent dealer/distribution profit and a $5 installation charge comes to less than $50.

David Romeo, president of Romeo Kogyo, which holds a contract with NHTSA for retrofit of police cars with driver-only systems, said he has shipped about 150 systems, has another 100 on the road, and has done training in installation in four states.

• Robert F. McDermott, head of U. S. Automobile Assn., said his company — the nation's seventh largest auto insurer—is buying 150 air-bagged Tempos and will retrofit several existing cars with the Romeo-Kogyo system. McDermott, who is also chairman of the National Assn. of Independent Insurers, is encouraging other insurance companies to take similar actions. He is also talking to the National Assn. of Fleet Administrators to encourage more fleet purchases of air-bagged Tempos.

California State Senator Diane E. Watson spoke of her attempt to require air bags in all state-owned or leased vehicles starting with '86 models and requiring those investigating accidents to report on the safety restraints in the vehicle and its use.

Michael Finkelstein, NHTSA official in charge of R&D, reviewed the agency program with Ford and the General Services Administration; with Romeo and police cars, and with Breed to develop the retrofit system using a mechanical sensor.

NHTSA has given no inkling of what its decision on Standard 208 will be nor what the timing will be, although mid-April seems far too optimistic.

New facility for Mazda Distributors Pacific

Mazda Distributors Pacific, the Western distributor for Mazda cars and trucks, has broken ground for a new facility which will be located on a 20-acre site in the Irvine (Calif.) Industrial Complex. Plans call for a 250,000-square-foot warehouse and a separate 26,000-square-foot single-story office building. Occupancy is slated for spring, 1985.

NHTSA report to Congress misses deadline by a month

Continued from Page 2

tions on new bumper designs since adopting the final rule easing the bumper standard from 5 MPH to 2.5 MPH. Manufacturers had not volunteered for bumper testing since adoption of the revised standard, NHTSA said.

• NHTSA said that it now plans to review the effectiveness of the current bumper standard by comparing cost and collision experience of baseline 1981-1982 cars with post-standard 1983-1984 cars.

The agency said development and demonstration of an experimental bumper test will be completed by April. The method will provide repeatable test results, use existing bumper-test facilities, and correlate with "real-world" data, NHTSA said.

The safety agency said 15 vehicles will be tested this summer from the 1984 model year. These will include the Ford Escort, Chevrolet Camaro, Chevrolet Citation, Plymouth Reliant, Ford Mustang, Buick Regal, Chevrolet Celebrity, Oldsmobile 88-98, Chevrolet Malibu, Buick Skylark, Honda Accord, Toyota Corolla, Datsun 300-ZX, Mazda GLC and a Volvo model.

NHTSA said the models and their sister vehicles will cover 64.5 percent of expected 1984 model year sales.

• By September, the agency predicted, insurance data reflecting on-the-road experience will be compared with the predicted performance.

Results from the bumper studies will be made available to the public, possibly as late as December this year through press releases and a customer "hotline."

NHTSA's report on the bumper standard listed several advantages and disadvantages concerning bumper identification through the use of labels on each vehicle.

Domestic makers offer 305 models

Continued from Page 1

Turbo three-door hatchback, a Dodge Omni GLH four-door hatchback (the GLH stands for Goes Like Hell), a Dodge Diplomat four-door sedan and a Dodge 600 Turbo convertible.

Today's 305 selections consist of 157 from GM, 82 from Ford Motor Co., 45 from Chrysler Corp., 15 from American Motors-Renault, 4 from Volkswagen and 2 from Honda.

The Renault, VW and Honda models in this tabulation include only those made in the U.S. Each company imports additional models.

Adding the 305 domestic offerings and the 199 imported selections (AUTOMOTIVE NEWS, March 12) gives the American buyer an imposing array of 504 models from which to choose.

GM's front-drive C-cars are being ballyhooed as '85 models, which is an indication of the lateness of their introduction and the clout of the company's marketing people.

They're certified as '85s for safety and emission purposes, of course, but their sales will be counted in the '84 model year. So they're included with the '84s in this tabulation.

This isn't a new strategem for the auto makers. Chevrolet Corvette, Ford Tempo and Mercury Topaz were pitched as '84s a year ago when they were introduced in the midst of the '83 season. And the original Mustang was called a '65 model when it was introduced in April, 1964.

There may be some confusion in store for Buick-Oldsmobile-Cadillac shoppers. They'll find two distinctly different sizes and types of cars bearing the Electra, Ninety-Eight and DeVille-Brougham names.

The cars weren't renamed because the old labels have long and honored histories at the three divisions.

Buick has been using Electra since the 1959 model year, and Cadillac adopted DeVille in 1949. Oldsmobile has had a Ninety-Eight Series since 1948. There was a Model 98 (denoting eight cylinders) in 1941, a Custom Series 98 in 1942 and a Custom Cruiser Series 98 in 1946 and 1947.

Oldsmobile has ended production of rear-drive Ninety-Eights, and Buick will wind up output of rear-drive Electras in mid-April. Cadillac will continue making rear-drive DeVilles through the '84 model year and rear-drive Broughams through '85.

• By market class, the 305 current domestic models are made up of 67 subcompacts, 79 compacts, 83 intermediates, 28 standard-size cars and 48 luxury cars.

A breakdown by body styles shows 116 four-door sedans; 140 two-door sedans, coupes and hatchbacks; 37 four-door wagons, and 12 convertibles.

Buick, with 43, has the most models for the '84 model year, followed by Ford, 42; Pontiac, 40; Oldsmobile, 33; Mercury, 30; Chevrolet, 28, and Dodge, 21.

Totals for other major domestic makes are Cadillac, 13; Chrysler, 13; Renault, 12; Plymouth, 11; Lincoln, 10; Volkswagen, 4; AMC, 3 and Honda, 2.

The AUTOMOTIVE NEWS new-model analysis includes all models the domestic manufacturers are pricing and/or merchandising individually. It does not include transmission or engine options.

Turbos are counted as models. It is felt that they have enough differences in trim, equipment and mechanicals to qualify for separate model designation.

obituaries

Albert Colussy

BRIDGEVILLE, Pa. — Albert Colussy, 84, founder of Colussy Motor Co. here — which claims to be the oldest Chevrolet dealership in the country — died March 14. He acquired the Chevrolet franchise here when he was 18 and operated it with his brothers until his retirement in 1975.

Leroy Cox

ACTON, Mass. — Leroy Cox, 47, operator of the Concord Auto Auction, died March 14 of injuries suffered in a March 12 fire at his home. He was a past president of the National Auto Auction Assn.

Eugene P. Langan

GLASTONBURY, Conn.—Eugene P. Langan, 52, owner of Gene Largan Volkswagen, died March 11. He had worked for the World-Wide Volkswagen distributorship prior to forming his own dealership in 1969.

Week's auto production is 174,590

Overtime heavy, but output slips

By Joe Wilssens
Staff Writer

Domestic auto makers scheduled overtime at 21 assembly facilities last week but saw production totals dip slightly from the previous week.

U. S. auto makers slated output of 174,590 units last week, down 3.68 percent from the previous week's 181,252, but the total was 29.35 percent higher than the 134,975 produced in the year-ago week.

To date this year, 1,992,128 autos have been completed, up 42.22 percent from 1,400,707 built in the comparable period last year.

Breakdown for the week by company was: General Motors, 57.96 percent; Ford Motor Co., 21.62 percent; Chrysler Corp., 14.89 percent; American Motors, 2.75 percent; Honda, 1.43 percent, and Volkswagen of America, 1.35 percent.

Facilities working two Saturday (March 24) overtime shifts at GM were Fairfax (Kans.), Framingham (Mass.), Janesville (Wis.), Lansing (G-line), Leeds (Mo.), Linden (N. J.) and Oklahoma City. GM's Bowling Green (Ky.) plant scheduled one Saturday overtime shift.

Eight Ford plants put in extra daily hours last week. They were: Atlanta, Chicago, Edison (N. J.), Kansas City, Lorain (O.), St. Louis, Wayne (Mich.) and Wixom (Mich.).

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 and No. 2 worked two 9-hour daily shifts, while Jefferson (Detroit) worked two 8½-hour daily shifts last week. Newark also scheduled two 8-hour overtime shifts Saturday.

$1-billion class-action suit filed against GM on X-cars

Continued from Page 1

to get its first major front-wheel-drive cars into production.

The complaint asserts that GM knew of the "defect" from its own test drivers' logs as early as January, 1978; that despite a recommendation from its own special task force, GM started production without making any changes, and that even when a GM vice president for engineering complained that the brake problem was not fixed, GM continued to sell the cars.

• The complaint also asserts that GM made some running changes but even these "inadequate" ones were not made on all cars, that GM advertised its cars as "safe and sound," and that it warranted its cars in writing and "impliedly warranted" them as "merchantable and fit" when it knew it was "false and incapable of fulfillment."

The complaint continues in the same vein as the government case: That GM supplied false and misleading responses to NHTSA; then conducted two "partial and wholly inadequate" recalls and thus "affirmatively misled" the public into believing that the brakes had been corrected.

Addressing the tolling of the statute of limitations, the suit says the plaintiffs "had no reason to suspect a design defect" in the brakes of these cars until NHTSA announced its initial finding of defect on Jan. 14, 1983.

The statutes of limitations are tolled, says the complaint, because of GM's "fraudulent concealment" and by the prior class action filed Aug. 5, 1983.

Relief asked does not include any monetary figure and nothing is asked for deaths or personal injuries that may have been involved.

The court is asked to certify the class using 10 as representative of the class. The court is asked to assess damages incurred by members of the class based on the difference between the value of the cars accepted and the value they would have had had the cars been as warranted.

The court is also asked for an award to the class of punitive damages in an amount "reasonably calculated to deter similar misconduct in the future."

The court is also asked for an order "entitling every member of the class to revoke his acceptance" of his car and requiring GM to "refund" the member's "purchase price upon tender of the automobile."

Further, the court is asked that members of the class be awarded costs of the case, including reasonable attorneys' fees and any other such awards and relief it may deem just and appropriate.

Since the same judge is handling both cases, it is assumed that Judge Jackson will continue with the trial in the government case first — perhaps another five or six weeks — and then turn to this case unless he rules — as GM wants — that the '80 GM X-body cars do not have a braking defect.

13 truck plants work overtime; 63,772 assembled

Overtime was scheduled at 13 plants last week as domestic truck makers were able to maintain the upbeat production of the previous week.

Truck manufacturers targeted production of 63,772 units last week. The total was down 147 units from the prior week's output of 63,919 but was 28.63 percent greater than 49,578 produced in the year-ago week.

Year-to-date, 727,424 trucks have been assembled, leading the year-ago total of 483,984 by 50.30 percent.

All six of Ford Motor Co.'s assembly plants scheduled additional daily hours last week.

At General Motors, Flint No. 2, Janesville (Wis.), Pontiac No. 5 and St. Louis worked two Saturday (March 24) shifts while Detroit scheduled one Saturday overtime shift.

Chrysler Corp.'s Warren (Mich.) truck facility scheduled two 9-hour daily shifts last week.

Nissan's Smyrna (Tenn.) plant continued extra daily hours last week.

Car-truck output in Canada holds at high levels

Canadian auto makers slated production of 23,736 cars last week, 213 more than the prior week's 23,123. The total was 36.67 percent greater than the 17,367 assembled in the year-ago week.

To date this year, the manufacturers have built 256,651 autos, 16.33 percent better than the 1983 total of 220,618 at this point.

Truck assembly last week was targeted at 17,995, down 117 units from 18,112 trucks completed the previous week but an impressive 78.70 percent ahead of 10,070 trucks assembled in the year-ago week.

So far this year, truck production has climbed to 191,006 units, a 69.13 percent improvement over the 112,933 trucks which were assembled at this time in 1983.

Chrysler Corp. estimated production of 2,364 Dodge Caravans, 2,196 Plymouth Voyagers and 912 Mini Ram Vans at its Windsor (Ont.) point last week, bringing the year-to-date T-115 total to 50,369.

Olds C-car arrives

FWD Ninety-Eight is smaller

The long-awaited front-wheel-drive Oldsmobile Ninety-Eight is 25 inches shorter than its rear-drive predecessor, and wheelbase has been trimmed 8.2 inches. The new C-cars have a wheelbase of 110.8 inches and overall length is 196.1 inches. The cars go on sale April 5. Stories and other pictures are on Pages 3 and 24.

Porsche faces 2 more distributor lawsuits

By Richard Johnson
Staff Writer

Two more Porsche distributors were reportedly on the verge of filing lawsuits late last week to prevent Porsche Cars of North America from taking over distribution of the West German-made luxury sports cars in their areas.

Mid-America Volkswagen, of St. Louis, and Riviera Motors, of Hillsboro, Ore., are expected to take legal action against Porsche AG, Porsche Cars of North America, Volkswagen of America and others.

Mid-America distributes Porsche, Volkswagen and Audi in Arkansas, Missouri, Nebraska and Kansas. Riviera is the distributor for the same three makes in Oregon, Washington, Alaska, Idaho and Montana.

World-Wide Volkswagen, of Orangeburg, N. Y., which distributes Porsche cars in New York, New Jersey and Connecticut, has already filed a $100 million lawsuit over termination of Porsche's distribution agreement with Volkswagen of America on Aug. 31.

Porsche announced a new U. S. distribution plan earlier this year that called for selling cars through company-run outlets and sales "agencies."

Under pressure from franchise-holders and several dealer organizations, Porsche recently backed away from its controversial new system and restored a traditional franchise network. But the manufacturer is going ahead with plans to sever ties with VWoA and the three independent distributors appointed by Volkswagen. Other U. S. distributorships are owned by VWoA.

• VWoA has not decided whether to sue Porsche for damages, but has submitted protests with auto franchising regulatory agencies in several states to fend off dealer actions which name Volkswagen as a party.

To date, VWoA has filed administrative challenges in 11 states, and has begun judicial proceedings in three additional states where there is no administrative recourse.

Hugh Springer, Riviera's vice president for Porsche-Audi, said the firm is ready to file suit to

Wentzville on high tech's cutting edge

GM puts accent on robots

By Aziz Shihab
Staff Correspondent

ST. LOUIS.—Enter the brand new 3.22 million-square-foot assembly plant which General Motors built in Wentzville and you are inside a giant, quiet, shiny hall where robots and computerized machines are more visible than people and where a car is put together faster than sewing a button on a shirt sleeve.

A hand-written sign saying "Vote no to sweat shops," was the only reminder of old-fashioned auto assembly plants where man had a direct hand in building the millions of vehicles on American highways.

This is a 1984, electronic-age plant where the word "plant" is not even in its name. They call it assembly center.

• Gary L. Cowger, 37-year-old plant manager who looks more like a professor than a foreman, wants one and all to know that GM can do whatever the Japanese can do, and on a much larger scale.

Said Cowger proudly, "This is the largest (auto) assembly plant in the world."

He spoke to this reporter in the visitors' dining room prior to a three-hour walking tour of the plant.

The plant is situated on 569 acres some 40 miles northwest of St. Louis, with 3.7 million square feet, or a total of 85 acres, under one roof (the assembly building alone has 3.2 million square feet).

Lake Orion links robots, teamwork and quality, Page 50.

He said the plant has a one-shift capacity of 542 jobs per day, or 75 jobs per hour.

"But now we are building only 30 to 40 jobs an hour," he said. "We are building GM's C-body cars."

• During the tour of the plant, it was learned that plans to build the Olds 98 that day were scrapped because there was a "quality problem" with the hood. So the plant's robots were re-programmed to build Buick Electras instead.

A one-shift work force is composed of 3,200 workers, Cowger said. The plant is capable of having a second shift with double the number of workers. However, less than 500 workers were at the plant during the tour.

Clusters of them were sitting in small rooms listening to instructions from their supervisors via closed-circuit TV.

Cowger and other spokesmen at the plant kept emphasizing the "new, working-together" relationship between management and labor.

They kept pointing to large signs on walls which read, in part, "We believe that all people have dignity and respond in the manner in which they are treated."

Cowger said the four paragraphs took three months to compose. They are designed, he said, to show that this new GM plant will meet any challenge coming from Japan. And to add to this "working-together" relationship, they say only first names are used. So, the plant manager is Gary, the production manager is Timothy (Sprecher), the comptroller is Bill (Ferguson) and the personnel director is Tom (Pilgington).

A worker in the paint department looked at a huge robot and said, "This is my co-worker, Mr. Robot."

• As one watches cars moving over the 20 miles of computerized conveyors, one sees a robot "tightening every movable part on the car" in 20 seconds, sees control rooms with colorful lights studied by one man, and walks to the end of the line where Buicks are readied for their trips to dealers' showrooms.

One is filled with mixed feelings.

And one cannot help but mar-

Buick's top model

FWD Electra debuts April 5

Buick officials are predicting great things for the new front-wheel-drive Electra and Park Avenue models which go on sale April 5. Model-year sales for '83 were 75,000; the new target is 125,000 to 150,000. Stories and other pictures are on Pages 28, 44 and 50.

Collaborator sought for 1986 launch of Project XX, the Honda clone

Austin Rover girds for return to U. S. market

By Richard Feast
European Editor

NICE, France. — Britain's Austin Rover Group (ARG) is "open to offers" of collaboration over its planned return to the U. S. market in two year's time.

Selling Project XX, the upper-range model being developed in conjunction with Honda of Japan, in the U. S. is a crucial element in ARG's aim of building annual volumes from below half a million to 750,000.

Mark Snowdon, managing director (commercial), explains, "There are many options for the way we will sell our cars in America. We've had discussions with maybe 10 different parties on the subject.

"We're now talking to fewer — and it's possible we will make an agreement with someone else entirely."

Snowdon confirms that Project XX will be introduced in the U. S. some time during 1986, although it will be launched in Europe toward the end of next year. To complete the preparation work, ARG will have to decide about its American future within the next six to eight months.

Snowdon's comment to Automotive News was only half in jest when he said, "Really, your story should say, 'here we are. Come and get us.'" He was speaking at the preview here of the Austin Montego sedan, which will be launched April 25.

Austin Rover is part of state-owned BL. Like other divisions of the group — Jaguar, Land Rover, Leyland, Unipart — it is now self-governing, and BL is merely a holding operation with minimal staff and day-to-day influence.

The UK Government's aim is to return each to private enterprise as soon as possible. Jag-

breaking news

Potamkin cleared in suit

PHILADELPHIA.—Pennsylvania Attorney General LeRoy S. Zimmerman has agreed to a court order requiring him to pay $25,000 to Potamkin Toyota, Inc., Media, Pa. The sum covers attorney's fees and court costs stemming from a consumer protection action which the office of the attorney general brought against the dealership last year. Potamkin Toyota was accused of violating a statute regulating automotive advertising. Robert Potamkin, the dealership's chairman, said, "The attorney general's office threatened us with litigation unless we signed a consent decree and paid a $1,000 penalty. We refused and they sued." The dealership was found innocent and then sought redress from the office of the attorney general.

Model-year sales goal set at 55,000

Downsized Olds 98 won't be at all outlets

By Jenny L. King
Staff Writer

SOUTHFIELD, Mich. — Oldsmobile's new flagship was christened last week at a national press preview in this Detroit suburb.

The downsized front-drive 1985 Olds Ninety-Eight Regency, some 685 pounds lighter than its rear-drive precursor, goes on sale Thursday, April 5, though there will not be one at each of the division's 3,200 dealerships by then.

"We've just had meetings in all 27 zones and the dealers are aware of the distribution plan," said Joseph J. Sanchez, Oldsmobile general manager. "There are outlets that sell only two or three Ninety-Eights a year," he continued, qualifying them as the dealers who will have to wait.

Sanchez said about 4,500 new Ninety-Eight Regency models will be at dealerships by introduction day.

"By the end of the current model year on Sept. 30, we expect to sell 55,000 of these new 1985 Ninety-Eights," Sanchez said.

Coupled with the Ninety-Eight rear-drive models, the last of which was assembled at Lansing March 16, sales are projected to total 121,000 units through Sept. 30.

The rear-drive Olds 88 is adding a model to its lineup, Sanchez said. The dressed-up version, dubbed Delta 88 Royale Brougham LS, will carry a higher price tag and will fill any void remaining between the last "old" Ninety-Eights and the new versions. The upscale 88 will be offered only as a four-door sedan.

• Sanchez underscored his concern for Olds' position in the marketplace. It is continuing pursuit of Ford for second place in domestic sales, and it is anxious to attract more younger, upwardly-mobile customers as well as converts from other domestic and imported luxury lines.

He said the new Ninety-Eights were tested side by side with cars built by Mercedes-Benz, BMW, Volvo and Audi.

How important is it to upstage Ford? J. F. Mattox, Oldsmobile general sales manager, said it would be a great psychological boost for dealers.

Customer satisfaction levels are being paid close attention, Sanchez said. In addition, present and previous Ninety-Eight owners are being contacted through a three-phase direct-mail program which includes a pre-announcement teaser mailing, followed by an announcement mailing to customers and potentials and then a dealer invitation to view and test drive the new Ninety-Eight Regency.

"I'd like to get into the mind of a customer," Sanchez said, referring to the first impressions and subjective reactions of people to cars. It's more than fuel economy and fit and finish that influence buyers, he indicated.

Another Sanchez goal is to raise the image of auto dealers in the mind of the public. "Before I leave the division, I want to get them up from the bottom of the ranks of people who can be trusted," he said.

Both Sanchez and Mattox predicted continued depressed sales for diesel-powered cars. As long as the pump price for diesel fuel is as high or higher than that of gasoline, there isn't much economic incentive to switch, they said.

The new Ninety-Eight Regency is available with the 4.3-liter diesel V-6. Standard engine is a 3.0-liter V-6, and a multiport fuel-injected 3.8-liter V-6 is the second option. Four-speed overdrive automatic transmission is standard.

When asked why Olds' diesel is an extra-cost option whereas Cadillac offers the customer a diesel with no price mark-up, the Oldsmobile spokesman said Cadillac's gasoline V-8 is a more expensive engine than the sixes, making the diesel-gas choice a more even trade at Cadillac.

Mondale drives millionth

Democratic Presidential contender Walter Mondale drove the one-millionth front-wheel-drive four-door model off the line at Chrysler's Belvidere (Ill.) plant March 16 as Secret Service agents walked alongside. The Dodge Omni will be shipped to Columbia Dodge, Ltd., New Westminister, B. C.

AMC's stock offering sold out in single day

By Kathleen Hamilton
Financial Editor

American Motors last week raised $136.2 million thorugh a public stock offering — sold out in one day—plus stock it sold to Renault and stock it put in its employe pension fund.

The shares were issued to offset anticipated capital needs for 1984, according to the newly published AMC annual report. In it, AMC predicted 1984 capital expenditures of $160 million, down 23 percent from 1983's $261 million.

AMC said it will need another $50 million in 1984, mostly for working capital and investment in its financing operation.

AMC originally had planned to offer 10 million shares to the public; the issue was raised to 12 million. Another 3 million shares will be contributed to the employe pension fund. Renault is to purchase 12.832 million shares to maintain its 46-percent share in AMC. Altogether, nearly 28 million shares will be issued.

AMC stock sold for $5.375 a share.

In its annual report to its 102,000 shareholders, AMC said it does not plan to use its $130 million line of bank credit this year, but will increase its bor-

Ford Escort tops list again for world sales in '83

DEARBORN. — Ford Escort, in 1983, was the world's best-selling car nameplate for the third consecutive year, according to Ford Motor Co.

Although sales results for all manufacturers are not yet available, the production margin for the Ford Escort over its competitors in 1983 was sufficiently great that it was "obvious" that it had outsold other nameplates, said Chairman Philip Caldwell.

Escort production in 1983 totaled 827,000 units; about 100,000 ahead of second-place Renault R-9 (Alliance in the U. S.) and about 120,000 ahead of third-place Toyota Corolla, Ford said.

Ford Escort is manufactured or assembled in eight countries — Britain, Germany, Portugal, Spain, the U. S., Canada, South Africa and Brazil.

59th year — No. 5015

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.

Conquest goal is 10-15 pct. of that group

Olds 98 aims at luxury imports

By Joseph Bohn
Marketing Editor

Oldsmobile feels it can realistically conquest 10 to 15 percent of the import luxury group with its new downsized front-wheel-drive Ninety-Eight.

The feat is considered important not only for the volume, but "our ability to penetrate (this segment) for the first time and stop the deterioration of young, better-educated buyers," said James Mattox, general sales manager.

The division figures to make its strongest headway in the Northeast and West Coast — even though the Southwest, places like Dallas, have been its biggest Ninety-Eight markets.

Dealers there will have to work harder to sway traditional Ninety-Eight buyers over to the new smaller models, Mattox said.

Meanwhile, Olds is using a two-pronged ad plan for both print and broadcast to target traditional Ninety-Eight Regency buyers and also conquest new import buyers.

Ninety-Eight ads will make wide use of TV, magazines, newspapers, outdoor billboards and direct mail—also a special executive demo ride program—for the largest single car line launch effort the division has undertaken.

TV features actor Christopher Plummer who emphasizes the traditional 98 attributes of luxury, six-passenger comfort and prestige in one commercial.

In another, he talks technology, luxury and prestige.

• Olds will use a combination of network news and prime time programming at announcement time. Spot market buys in the top 21 Ninety-Eight price-class markets reinforce the network.

To round out its TV, Olds will include Ninety-Eight ads in spot golf tournament buys and on cable TV and live cable sports coverage.

In print, it will use both magazines and newspapers.

Two magazine ads, one a spread and the other a single page, feature Ninety-Eight's luxury attributes. The single-page ad talks high tech. All use the headline, "Introducing the 1985 Ninety-Eight Regency, Precise Road Management Engineered in a Luxury Automobile."

Major news weekly and mass magazines will be used to supplement TV's broad coverage. High-income demographic vertical publications are being used to more closely target specific groups.

National newspaper includes the Wall Street Journal, USA Today, Barron's and Christian Science Monitor which carry two-page announcement on April 5.

Newspapers in the major metro markets will carry similar center section spreads subsequently.

Special Fiber-Optic outdoor billboards in selected cities will also carry the Ninety-Eight high-tech and luxury message.

• A three-phase direct-mail program will also target the Ninety-Eight. The first phase is a pre-announcement teaser mailing to 220,000 previous and current Ninety-Eight owners.

The second phase is an announcement mailing to past and present Ninety-Eight owners, selected competitive domestic-car owners, selected competitive import-car owners and VIPs in major companies — a total of 740,000.

The third phase involves a direct-mail invitation from the prospect's nearest Oldsmobile dealer for a test-drive.

Olds is also running a special test-drive program through Visual Services, offering executive-type individuals a chance to evaluate the car for three days.

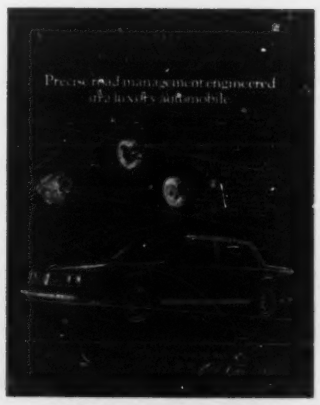
The division is placing 320 Ninety-Eights in 10 major markets for the three-day VIP driving evaluations.

A total of 3,000 VIP Evaluations are anticipated for sales, marketing, product, manufacturing and quality analysis.

A large number of diversified promotional programs will be carried out in some 70 markets by Olds marketing groups during the Ninety-Eight's introduction.

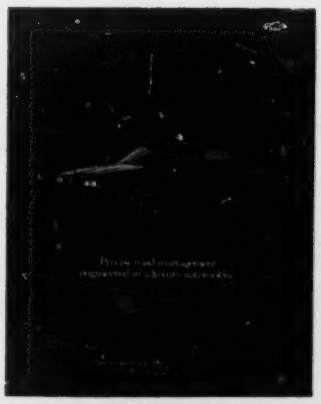
There will be one million six-page inserts of the Ninety-Eight in all New York Playbill programs during April. Many groups will support test-drive events.

Leo Burnett is Oldsmobile's agency.



Heavily engineered

Engineering features geared to handling and response highlight this ad for the Oldsmobile Ninety-Eight, running in 19 news weekly, business and science publications. Leo Burnett handles.



More traditional

This ad playing up luxury as well as engineering features in the new Ninety-Eight, aims at more traditional audiences. It runs in 29 publications, mostly city and regional magazines and some monthlies. Leo Burnett handles.

Postal Service purchases 2,580 delivery vehicles

WASHINGTON. — The U.S. Postal Service has signed contracts for the purchase of 2,580 heavy-duty delivery vehicles.

Carter Chevrolet, of Okarche, Okla., will furnish 756 2½-ton parcel delivery vans to the Postal Service at a cost of $15,799,516. The government said the purchase will replace the entire existing parcel delivery van fleet.

International Harvester will deliver 1,824 five- and seven-ton cargo vans to the Postal Service for a price of $40,462,923. The cargo vans will replace approximately 92 percent of the Postal Service's current five-ton cargo van fleet.

International Harvester will supply 538 five-ton vehicles and 1,286 seven-ton units.

Sales post 8th straight gain of year

By Jenny L. King
Staff Writer

Domestic new-car sales continued well above year-ago levels in the mid-March period although they were not outstanding compared with most previous years. The total for the 10 days was up 33.40 percent over 1983, and it was the eighth consecutive plus period of the current calendar year.

Year-to-date sales through March 20 were floating 41.12 percent above the 1983 level, up to 1,681,166 compared with 1,191,261.

Mid-March sales for the six major U.S. auto makers numbered 231,481. A year earlier, they totaled 173,525, and two years ago, the total for the period was 182,639.

Range for March 11-20 swings from a low of 116,999 (1958) to a high of 326,093 (1981). The 1981 record was artificial in what turned out to be one of the recession years. Sales opened up that March because of general rebates offered retail customers by auto makers.

Ford Motor Co. reported the greatest increase in sales among the Big Three for March 11-20: Up 51.97 percent, to 54,710 from 36,000 last year. General Motors was up 28.64 percent, to 139,503 from 108,442. Chrysler Corp. sales of 28,162 were up 26.12 percent from 22,329.

American Motors, the largest of the "Little Three," issued an estimate mirroring year-ago sales. AMC said its dealers delivered 4,750 U.S. Renault/AMC cars in the middle 10 days of the month both this year and last. Volkswagen sales were up 21.45 percent, to 1,948 from 1,604, and Honda's 2,408 Accord sales were six times the estimated 400 units a year earlier.

• GM earned 60.27 percent of the domestic market for the period, down from 62.49 percent last year. Ford claimed 23.63 percent, up almost three percentage points from 20.75 percent a year ago. Chrysler slipped to 12.17 percent from 12.87 percent. AMC dropped to 2.05 percent from 2.74 percent, VW dipped to 0.84 percent from 0.92 percent and Honda was up to 1.04 percent from 0.23 percent.

AMC and Cadillac were the only U.S. makes that failed to surpass year-ago sales during the period. AMC dropped 33.33 percent and Cadillac was down 9.89 percent.

At Chrysler Corp., Plymouth was up 10.84 percent, Chrysler was up 29.29 percent and Dodge was up 39.70 percent. Mercury was up 71.75 percent, Lincoln was up 59.19 percent and Ford was up 43.39 percent.

Buick was up only a few units, or 0.05 percent, Oldsmobile was up 69.45 percent, Pontiac was up 45.86 percent and Chevrolet was up 25.85 percent. AMC's Renault products enjoyed an estimated increase of 14.29 percent.

With eight selling days in the period both this year and last, the daily selling rate was up 33.40 percent, to 28,935 from 21,691.

Oldsmobile's Cutlass Supreme was the runaway best-seller in mid-March with 13,904 sales. Chevrolet Cavalier was second at 9,988, followed by Chevrolet Celebrity at 9,594, Oldsmobile Cutlass Ciera at 9,498 and Oldsmobile 88 at 9,282.

Annualized sales based on the mid-month performance were moving at a rate of 7,852,000 units.

GARY COOPER TELLS YOU WHY...

"YOU HAVE A UNIQUE OPPORTUNITY TO GET IN ON THE GROUND FLOOR OF A DEVELOPING GROWTH TREND IN THE TRUCK BUSINESS."

"It's like the good old days in the car business. Only better!"

"Remember how good the car business used to be? Growing customer demand. Products that offered buyers a real difference. A chance for the dealer to make a decent profit."

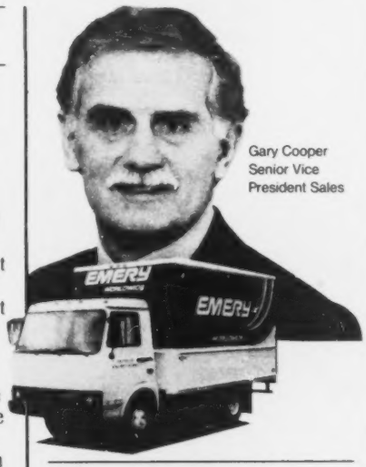
"If you can remember the good old days, then let me tell you about a profitable and growing business that can be as good today as the car business once was. A separate profit center in your dealership that requires no new facilities and no major financial investment. A business that lets you put the same talents and skills to work that have already made you a successful dealer...and pays a better return on your investment than the franchise you now hold."

"IVECO European Class Diesel Trucks let you sell to a whole new class of customers."

"Hundreds of commercial truck buyers right in your market aren't buying the trucks they need. I'm talking about customers who need fuel-efficient, maintenance-efficient, long service life trucks in the 10,000 to 20,000 GVW range...the upper end of Class 2...plus Classes 3, 4, and 5.

"Potentially, there are over two million of these customers out there...wholesale and retail distributors who need intermediate range trucks to meet their cargo requirements...and lower cost of operation to fit their economic needs."

"Domestic manufacturers simply haven't provided product entries with the GVW load-carrying capacities these customers require. So, in the past, buyers had to settle for overworked, overloaded light-duty trucks...or for under-utilized Class 6 medium-duty trucks.



Gary Cooper
Senior Vice
President Sales

"European Class means a lot to your customers. And a lot more to your sales."

"European Class represents the very best in European truck design and engineering. It means outstanding craftsmanship in material, assembly, fit and attention to detail. And, it means advanced diesel technology, unsurpassed in today's state of the art."

"European Class lets you offer your customers a unique product with owner benefits others can't match. For example, dramatically lower operating costs. Customers who currently operate gas-powered trucks will be amazed at the cost-savings our diesels deliver. IVECO owners report up to $20,000 savings in the first 150,000 miles of operation."

"You'll also be selling a proven product. IVECO trucks have been operated around the world over millions of miles. Our diesel engines are among the finest in the world... Designed and built to be diesels in the first place...by a company with over 70 years of diesel experience... one that builds over 400,000 diesel engines each year."

"There's so much more to offer your customers with IVECO. A completely rebuildable diesel engine, lower maintenance costs, a real truck chassis and plenty of driver comfort and convenience."

"European Class profits and first class dealer support."

"Dealer margins on IVECO European Class Diesel Trucks are among the best in the business. And so are our support programs. We offer special sales incentive plans, co-op advertising allowances, Yellow Pages co-op, sales and service training... and much more. Our support programs are designed to help you get the sale in the first place and to make a profit in every department."

"In addition, IVECO prides itself in providing the best after-sales product support in the truck industry. Product Support Managers provide in-dealership training, counsel and assistance to your parts and service personnel. Our 800 WATS lines provide full business day information and service assistance, and take emergency parts orders which are filled within 24 hours."

"IVECO has made a substantial investment in the quality of its product support service to match the outstanding quality of its products."

"Think it over. Then decide. It's time you put European Class on your financial statement."

NHTSA permits new type of bulletproof shield

WASHINGTON. — NHTSA will permit installation of a new type of bullet-resistant shield which can be placed behind a motor vehicle's windshield and other glass areas.

NHTSA has amended its standard on glazing materials to allow the use of a transparent, plastic shield by those needing this type of protection for their vehicles.

NHTSA said the shields are mounted completely inside the vehicle but must be readily removable to ensure that drivers can clean both sides of the shield and remove dirt that can impair visibility.

The amendment also adopts the most recent version of Standard Z26, the safety code for glazing materials published by the American National Standards Institute. This code permits manufacturers to use the latest technological developments in glazing.

NHTSA said that although the latest version of Z26 eliminates several unnecessary test requirements, the action will not have an adverse effect on safety. The new amendment is effective immediately.

Dealers donate to Olympic committee

Opening ceremonies for the Orange County (Calif.) Auto Show included the presentation of a $5,000 check from local dealers to the Orange County chapter of the U. S. Olympic Committee. Participating in the ceremony were, from left: Tom Liegler, manager of the Anaheim Convention Center; Dennis Landesmann, co-chairman of the Orange County U. S. Olympic Committee; Edsel B. Ford II, advertising manager, Ford Division; Sam the Eagle, official mascot of the U. S. Olympic Committee; Louise Murphy, general manager of Mission Viejo Mercedes-Benz and treasurer of the Orange County Auto Dealers Assn., and Ben Bay, Anaheim city councilman.

New Colorado auction

LOVELAND, Colo. — Western State Auto Auction, Inc., has opened here. The sale, the fourth dealers' wholesale car auction in Colorado, operates on Thursdays, according to owners Jerry and Renee Taylor.

10-year sentence given seller of stolen M-B cars

PHILADELPHIA.—Joseph A. Gavel was sentenced to 10 years in prison for selling stolen Mercedes-Benz cars in this area at "wholesale" prices.

U. S. District Court Judge Clarence C. Newcomer, in sentencing Gavel, noted that he had been placed on probation after two prior convictions for selling stolen Mercedes-Benzes.

Gavel, who is a former assistant coach of the old Philadelphia Bell professional football team, was indicted last November and pleaded guilty to charges of participating in a stolen luxury-car ring that operated from 1978 to 1983 in the Eastern U. S.

An investigation by the FBI, state and local police showed Gavel had bought expensive Mercedes-Benz cars for as little as $6,000 from car thieves.

The cars had a market value ranging from $35,000 to $70,000 and Gavel sold them to buyers in this area at bargain prices.

To generate funds for his defense

DeLorean gets OK to sell ranch

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — U. S. District Judge Robert M. Takasugi last week granted John Z. DeLorean permission to sell or mortgage his 48-acre San Diego County ranch to generate funds for his defense in a drug-trafficking case here.

Attorneys Howard Weitzman and Donald Re argued that DeLorean has been unable to pay them for eight months and that both men have used more than $300,000 of their own money to defray defense expenses.

They also told the judge that DeLorean's personal cash flow is negligible since his assets, which include Logan Manufacturing, a New York co-op and a New Jersey estate, are tied up in bankruptcy proceedings against the defunct DeLorean Motor Co. in Detroit.

DeLorean's ranch had been posted as $2.5 million security against $5 million bail — the balance secured by the former auto maker's signature on an appearance bond.

As a result, DeLorean's bail is unsecured, although Takasugi ruled that once DeLorean obtains money from the sale or refinancing of the property, some of that cash must be used as bail security.

However, Sheldon Toll, who has been representing the trustee appointed by the Detroit bankruptcy court, told a local paper that he intends to move to obtain some of the proceeds from the Pauma Valley ranch for the trustee.

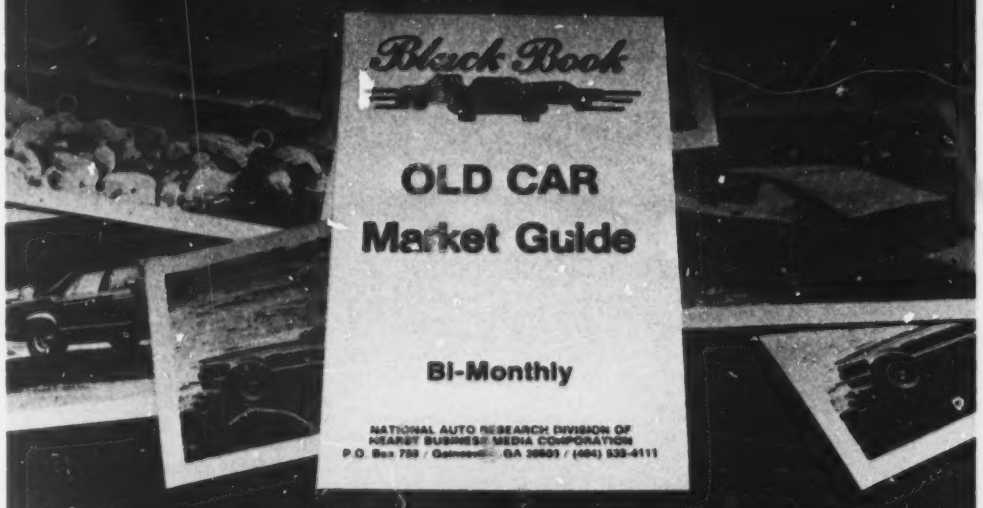
Jury selection in the cocaine-trafficking case against DeLorean continued last week and is expected to continue another week before the trial can begin.

Toll-free Fiat number to help parts operation

HASBROUCK HEIGHTS, N.J. —Fiat Motors of North America has a new toll-free number — (800) 447-4700 — to improve communications between the company, its authorized parts and service centers and the service trade.

FMNA maintains a network of 280 parts and service centers to support the 400,000-plus Fiat and Lancia cars in operation in the U. S.

OLD CARS... NEW OPPORTUNITIES



Using outdated [illegible] values is risky business, especially where older cars are concerned. The best protection is the Black Book Old Car Market Guide, with its up-to-date prices for vehicles the pre-date our regular Used Car Market Guide by 12 years. So you can safely determine the value of a car that's as much as 14 years old.

The Black Book Old Car Market Guide has the current, timely and accurate figures you expect of other Black Book Guides because the valuations are provided by the same on-the-spot professional reporting from local auctions in each area.

Every two months you can count on an updated, pocket-size report that shows market prices in two appraised conditions: Clean and Average. These figures are actual sale prices recorded from major auctions, then tabulated with computer precision.

Since 1955 Black Book publications have set the standard for fast, accurate [illegible] trucks and imports. [illegible] of the times, the Market Guide [illegible] to help eliminate [illegible] and create new opportunities.

Anything Less Is a Guess!

Four weeks ahead of 1983

Two-millionth auto of year built

By Joe Wilssens
Staff Writer

U. S. auto manufacturers recorded a number of milestones last week. Among them was production of the year's two-millionth car on March 26, nearly four weeks ahead of 1983.

March production was estimated at 777,419 cars, leading the year-ago month's 574,535 by 35.32 percent. It was the best total for the month since 889,775 were assembled in 1979, and the best any-month total since 783,843 were completed in October, 1979.

March output helped lift this year's estimated first quarter production to 2,151,217 cars, 43.01 percent over last year's 1,504,278. The three-month total was the best output for any quarter since 2,485,124 cars were built during the second quarter of 1979, and was the best first-quarter production since 2,415,422 were completed in 1979.

Domestic auto manufacturers slated production of 179,239 units last week, 4.09 percent greater than the prior week's 172,195 and 77.21 percent better than 101,145 built in the year-ago week.

Year-to-date, 2,168,972 cars have been completed, an impressive 43.55 percent increase over 1,510,915 assembled during the same period last year.

Breakdown for last week by company was: General Motors, 56.40 percent; Ford Motor Co., 22.48 percent; Chrysler Corp., 15.46 percent; American Motors, 2.68 percent; Honda, 1.67 percent, and Volkswagen of America, 1.31 percent.

Chrysler produced its one-millionth 1984 vehicle March 27. This was nearly 2½ months earlier than last year, when the millionth vehicle was assembled June 15.

The auto producers last week scheduled 23 plants for daily or Saturday overtime.

At GM, 10 plants worked two Saturday (March 31) overtime shifts. They were: Arlington (Tex.), Detroit, Doraville (Ga.), Fairfax (Kans.), Flint (B, D and G Lines), Janesville (Wis.), Lansing, Linden (N. J.), Lordstown (O.) and Pontiac.

Ford scheduled daily overtime last week at all but one of its auto plants. They were: Atlanta, Chicago, Edison (N. J.), Kansas City, Lorain (O.), St. Louis, Wayne (Mich.) and Wixom (Mich.).

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two 9-hour daily shifts last week with Jefferson (Det.) working two 8½-hour daily shifts. Belvidere, Jefferson and both St. Louis facilities also worked two 8-hour Saturday shifts.

First-quarter production in Canada highest since '79

Canadian auto and truck manufacturers wrapped up production for the first quarter of 1984 with the best output for any quarter in five years.

Canadian auto makers slated first quarter production of 283,117 units, their best any-quarter total since 294,832 cars were built in the first three months of 1979. The total includes production for March of 101,827 units, the best March output since 112,128 in 1978.

Auto producers slated completion of 23,936 cars last week, down 83 units from the prior week's 24,019, but 45.49 percent better than 16,441 assembled in the year-ago week.

To date this year, the manufacturers have assembled 280,870 autos, 17.98 percent ahead of 238,062 completed during the same period in 1983.

Truck makers estimated production of 207,804 units during the first quarter of this year.

It was the best output for any quarter since 222,824 trucks were built during the first three months of 1979. The total includes estimated production of 71,358 trucks during March, the best total for the month since 78,196 in 1979.

Truck assembly last week was targeted at 17,083, down 4.86 percent from the previous week's 17,955, but more than double the 8,059 built in the year-ago week.

Year-to-date, 208,049 trucks have been assembled, an impressive 72.42 percent increase over 120,667 built during the same period last year.

Chrysler Corp. estimated completion of 1,973 Dodge Caravans, 1,827 Plymouth Voyagers and 760 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 54,798.

St. Louis dealers participate in charity telethon

ST. LOUIS. Automobile dealers assisted in the St. Louis Variety Club Telethon that raised more than $1 million for 100 children's agencies.

Johnny Londoff, a Chevrolet dealer and Time Magazine Quality Dealer Award winner, was chairman of the event, and George Capps, a VW distributor and president of Capital Coal & Coke Co., was honored as "Man of the Year."

In addition, as has been the custom over the years, many dealers volunteered and made donations to the telethon which starred Sammy Davis Jr., John Forsythe and Monte Hall.

Truck production for March is best in 5 years

U. S. truck producers estimate March output as the highest for any month since June, 1979, and the best for March since 1979.

Last month, the U. S. makers slated production of 279,939 trucks, up 32.83 percent from 210,744 completed last March. It is the best total for the month since 358,126 were built in 1979 and is the highest any-month total since 292,897 trucks were assembled in June, 1979.

Production during the first quarter of 1984 was estimated at 806,451 trucks, leading the year-ago period's 511,402 by 57.70 percent. It was the best first-quarter output since 1,003,218 were built in 1979 and is the best any-quarter total since 887,948 trucks were assembled during the second quarter of 1979.

Truck manufacturers slated production of 63,626 units last week, down 1.90 percent from the previous week's 64,855 but a substantial 75.60 percent increase over 36,234 built in the year-ago week.

So far this year, the industry has completed 792,133 trucks, 52.20 percent better than 520,472 built at this time in 1983.

Nine truck facilities worked extra hours last week.

At General Motors, Janesville (Wis.), Lordstown (O.), Pontiac No. 6 and St. Louis worked two shifts on Saturday (March 31).

Four Ford facilities worked additional daily hours last week. They were: Kansas City, Lorain (O.), Louisville and Wayne (Mich.).

Nissan's Smyrna (Tenn.) plant continued extra daily hours last week.

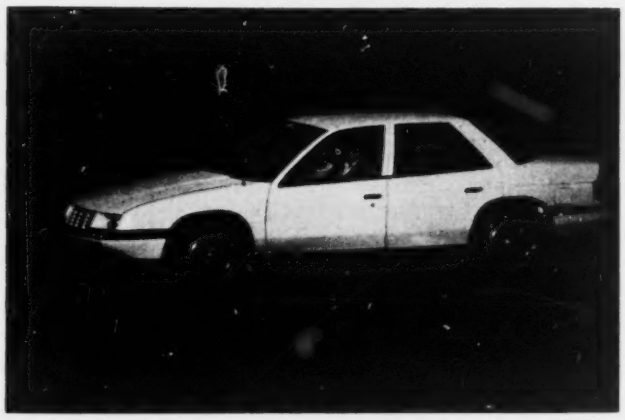
X-ception



Jim Dunne

And X-clusive for Chevrolet

The Citation II, scheduled for introduction in late 1986, is slightly smaller and lighter than today's model and will be more fuel efficient with a standard 2.0-liter engine. Chevrolet will be the only division to have the aerodynamically re-designed series for the 1987 model year. The body name is being changed from X to L.

Scarcity of clean pieces cripples used-car market

By Richard Johnson
Staff Writer

Given a steady supply of quality vehicles, used-car dealers in most sections of the U. S. expect to benefit this year from the same economic forces which have boosted the new-car market.

But retailers surveyed by AUTOMOTIVE NEWS report a scarcity of late-model automobiles in good condition, and many are concerned that shortages will prevent the used-car market from taking off in 1984.

Lackluster sales have been cited in some locales, with the blame often pinned on limited availability caused by manufacturing cutbacks and a dearth of trade-ins during the new-car slump. But some of the softness has been attributed to poor weather, regional economic problems and consumers opting for new cars instead of used.

Meanwhile, a few trends have become apparent in the early spring market. Well-appointed full-size and luxury models with few odometer miles showing remain popular among used-car buyers, and are the hardest to find.

Vans, wagons, sport models and most intermediates have also been strong, while some dealers report having trouble clearing compacts and subcompacts from their lots.

Despite the lapse in supply, both independent retailers and used-car managers at new-car dealerships are sounding generally optimistic about the remainder of the calendar year.

"Assuming there are no major problems, anyone who doesn't make money this year is in real trouble," said Chuck Nicholson, an independent dealer in Canton, O., who is past president of the National Independent Automobile Dealers Assn.

"I think you're going to see one of the best years we've seen in the used-car business in three or four years if the economy stays like this," added Ray Glover, of Stockton, Calif., a member of NIADA's executive committee.

• Both dealers expect strong new-car sales to rub off on the used-car business by placing more top-quality vehicles on the market.

"I'm the world's biggest fan of the new-car dealers," said Nicholson. "If people didn't buy new cars there wouldn't be any used ones available. When new-car sales are good, the following year or two are usually good for us. My best years in business were when they were selling 10 or 11 million new cars a year."

NADA has yet to release its report on retail used-car sales for 1983, although a spokesman predicted it will show an increase of about 10 percent over the previous year.

The Hertz Corp. used-car sales study is due later this year. Last August, Hertz reported that sales in 1982 fell 6 percent to 16,643,000 from 17,712,000 in 1981, and were off 10.8 percent from a record 18,644,000 sold in 1980.

A return to 1980 sales levels for the retail industry may depend on supply.

"Everything is scarce," said Nicholson. "The problem is that people have not bought new cars during the last two-three years and they haven't traded any in."

"Supply is short, there is no question about it," said Glover. "The auctions are down 30-35 percent out here. There is less for the dealers to bid on."

Reduced supplies are forcing some dealers to become more

Cost-benefit analysis indicates big savings

Study supports move to ban lead

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — As EPA works toward writing a rule that will reduce or eliminate the use of lead in gasoline, possibly by 1988, the agency will be armed with its recently completed cost-benefit analysis showing that a ban on lead could save the national economy more than $700 million in that year.

The cost-benefit study combined dollar gains in such areas as maintenance benefits, misfueling elimination, lower vehicle emissions leading to a reduction in national medical care costs and lowered environmental costs.

The combination of those dollar amounts shows a net gain for the benefits side of $786 million under the low-lead option and a $704 million balance in favor of a total lead ban.

(The reduced gain under a total lead ban results from the need to introduce a slightly higher octane gasoline for use of leaded-gasoline vehicles.)

The study has been praised by the White House Office of Management and Budget (OMB) as a "very fine example of an economic anaylsis of a regulatory issue."

• However, Ethyl Corp., which was established to market the use of tetraethyl lead in gasoline, is objecting to the analysis, claiming that EPA's cost information is insufficient to support the report's anti-lead conclusions.

Energy Secretary Donald Hodel has come down somewhere in the middle by coming out against a House bill that would ban leaded gasoline by 1987, but favoring an EPA rulemaking approach. Hodel has said a lead ban by 1987 would be "premature."

He told a House Environmental subcommittee that heavy trucks, agricultural equipment and older vehicles might be unfairly burdened by such legislation since many of those vehicles need lead if their engines are to operate properly. This may also hold true for certain marine engines.

EPA Administrator William Ruckelshaus has also suggested moving to a partial reduction in lead content of 0.1 gram per gallon, a miniscule amount that would still protect most engines requiring lead. Refiners are currently required to average 1.1 grams of lead per gallon.

• Whether the low-lead or no-lead option is pursued by EPA, the proposed rule should undergo OMB inspection in several weeks, according to EPA personnel.

Ruckelshaus is concerned that a growing number of vehicles that should use unleaded gas are being misfueled with leaded gasoline as their drivers seek a way to cut gasoline consumption costs.

Aside from ruining the vehicle's pollution control system and multiplying by several hundred times the amount of harmful emissions emanating from the cars, the use of leaded gasoline in an unleaded system will also wear down other engine components and increase vehicle maintenance costs, according to EPA.

Yet, even after widely publicized fines were levied by EPA against high-profile misfuelers such as police departments, EPA seems to have come to the conclusion that a recent EPA survey found 12 percent of catalytic converter-equipped vehicles are being misfueled and the misfueling problem is getting worse. There is a certain amount of fear at EPA that if the problem is unchecked, the agency's work to clean up car emissions will begin to slide backwards. This fear explains in part, the

EPA to revise mileage label

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Starting with '85 models, EPA will change fuel economy label requirements from just city figures to adjusted city and highway figures.

The city figure is to be adjusted 10 percent down and the highway figure 22 percent down to correspond more nearly to real-world conditions like driver habits, maintenance and road and climate conditions.

EPA is taking this step to raise its credibility and the usefulness of its data. None of the EPA amendments will affect the way CAFE is determined or the manufacturers' ability to comply with CAFE standards.

The factor to be used on the city cycle is 0.90, and the highway cycle factor is 0.78, to be applied to all manufacturers and all technologies.

The decision to use both city

Bieber to meet with Chrysler nominating committee

DETROIT.—UAW President Owen Bieber will meet individually with the three members of the nominating committee of the Chrysler board of directors to discuss his possible nomination to the company's board. It had been rumored that Bieber would be nominated at last week's board meeting, but that was never on the schedule, Chrysler said. Bieber's name also does not appear in the proxy statement due later this month. The UAW, however, is confident he will be seated on the board to replace former UAW President Douglas A. Fraser who retires at the Chrysler annual meeting, June 7. Robert J. Lanigan, president and chief executive, Owens-Illinois, Inc., Toledo, and Robert S. Miller Jr., Chrysler executive vice president, finance and administration, were elected to the Chrysler board at last week's meeting.

Nissan picks site of British plant

TOKYO.—Nissan has selected for its British auto assembly plant an 800-acre plot in Washington, in northeastern England. In Phase I of the project, Nissan will purchase 297 acres and hold an option on the remainder. Plant construction is to begin next year, with production of Stanza-sized cars beginning in mid-1986. Investment in Phase I is about $35 million.

The way they planet at GM

LONDON.—The Saturn project is "only a beginning" for General Motors, reports Roger B. Smith, chairman. "Soon there will be a Venus and a Jupiter," he told a conference organized here by the Open University.

Is this the new Saab?

Insiders in Europe say this rendering of the new Saab, grille aside, is very close to reality. Jointly developed with Lancia, the new car may continue the "900" name. It features flush door frames extending into the roof, a longer wheelbase and more room inside. The four-cylinder engine will be installed transversely on the front axle. Announcement is slated for early 1985, with exports to the U. S. beginning immediately.

Chevrolet cuts price, discount of base S-10

By Joseph Bohn
Marketing Editor

Chevrolet cut the price and dealer discount on its base-model S-10 pickup and also is paying dealer cash incentives on the S-10 and dealer/salesperson incentives on the Citation.

Meanwhile, Dodge extended its Shelby Charger program and launched an extensive truck program of consumer rebates and dealer/salespeople cash incentives.

Effective April 2, Chevrolet cut the price of its base two-wheel-drive short-wheelbase S-10 to $5,990 from $6,398 to create a price leader of under $6,000 for promotional purposes.

It also cut the dealer discount on that model to 11 percent from 15 percent, making it more consistent with competitive models.

The division is giving special price reduction allowances on comparable short-wheelbase S-10s in stock at dealerships prior to April 2.

From April 2 to May 31, Chevrolet is also running a special dealer cash incentive on all new '83/'84 S-10 pickups.

The contest pays nothing for 0-49.9 percent of an S-10 sales objective; $200 per unit, retroactive to the first sold, for 50-99.9 percent of objective, and $500 per unit, non-retroactively, for 100 percent of objective and over.

On the '83/'84 Citation models, there is an April 2-June 30 dealer cash incentive. Dealers get $100 per unit retailed, beginning with the first. Those who hit 34 percent of their objective by April 30 get $125 for all units they retail. Fleet/lease sales are excluded.

Chevrolet also has a salesperson incentive on Citation during the same time period which pays $200 on all retail deliveries, excluding fleet and lease.

• Dodge extended its Shelby Charger program, offering dealer cash incentives of $200 to $500 on '84 models, to May 20 from March 31.

In addition, it has a three-phase consumer rebate dealer/salesperson cash incentive on selected Dodge trucks from April 1 to June 30.

During April 1-June 30, Dodge is giving $500 rebates on '83/'84 two and four-wheel-drive 250 and 350 pickup trucks. There is a sold-order protection on orders received by May 18.

During the same period, dealers have been assigned program objectives on '83/'84 Ramchargers and all domestic Ram pickups. Zero to 33.3 percent of their objective pays nothing; 33.4 percent to 66.6 percent pays $75 per unit, and 66.7 percent to 99.9 percent pays $150 per unit. Finally, 100 percent and over pays $300 per unit.

If a dealer hits an April 1 to May 20 fast-start objective, his payments double in each category to $150 (instead of $75), $300 (instead of $150) and $600 (instead of $300).

There is a four-unit, no-pay qualifier, so that if a dealer hits 33.4 percent of his objective on only four sales, he doesn't get paid until the fifth.

To get the cash, dealers have to agree to participate in the salesperson program which runs from April 11 to June 30. Salespeople get a flat $50 per sale of '83/'84 Ramcharger and domestic Ram pickup — with dealers paying $25 and the company $25.

92,000 attend show

ANAHEIM, Calif. — The Orange County International Auto Show was attended by nearly 92,000 people, according to the Orange County Dealers Assn.

Shorter worktime to be a key issue, White says

Canadian UAW sets out on its own

By Marjorie Sorge
Labor Editor

TORONTO.—The follow-the-leader type of auto industry labor negotiations in the U. S. and Canada is permanently over, according to Robert White, UAW vice president and director of the Canadian region.

White said this year the Canadian region will negotiate independently from the UAW in the U. S. and will seek shorter worktime as one of its key issues.

The contracts between the UAW and Ford and General Motors of Canada expire Sept. 14. In 1982 talks, the Canadians went their own way, refusing to open talks early as was done in the U. S., when so-called concession bargaining occurred.

The UAW in Canada did give up its paid personal holidays in that round of bargaining during a deep depression in the auto industry.

Now, according to White, the Big Two owe the workers nine paid days off a year, the equivalent of what was given up in PPH days in 1982. He said these days don't necessarily have to be returned as PPH days, but he warned that the corporations had better be ready to recommend an alternative.

Other key issues in this year's talks include:

1. A general wage increase more than the 3 percent annual improvement factor usually generated in contracts with the auto makers.

2. A continuation of cost-of-living adjustments (COLA), with the same all-Canadian formula—increases based on Canadian inflation rates.

3. Increases in pension benefits. According to White, some people are talking about $1,500 a month total benefits, an increase of about $600 and "there is nothing wrong with that."

4. A prepaid legal services program.

5. Decreased overtime, although White said it is very difficult to find a solution to that problem.

"It is a very difficult problem to handle in the auto industry where all of a sudden the consumer latches on to a product and the market seems to open up and zoom; they have to go full out," he said. "It is fine for us to sit back and say 'plan better,' and I think we have planned better than in the past but still nobody can anticipate massive consumer switches and preferences."

While some people have indicated that heavy corporate penalties for overtime or mandatory time off might help cut down the overtime hours, White said he doubts either of these ways would work.

6. The elimination of the 85 percent hiring-in rate negotiated in 1982. Under that provision, new hires received 85 percent of the regular wage, moving up to 95 percent in 18 months.

Up until 1982, the Canadian section of the UAW basically rubber-stamped the U. S. agreement with the Big Three with small accommodations for the Canadian situation.

But in 1982, the Canadians refused to go along with the international UAW on "concession" bargaining and negotiated solely on Canadian issues.

According to White, the UAW's refusal to make concessions didn't hurt Ford's or GM's profits. GM of Canada had record profits in 1983, $675.6 million, better than the combined profits for 1978, 1979 and 1980. Ford of Canada made $153 million, one of its best years.

Both the Canadian auto companies and some people in Solidarity House, UAW headquarters, had problems with the Canadian move to autonomy, but White said they all finally understood that the rubber-stamping days were over.

"This was one of the first times the corporations said OK, Canada is a separate country and we have got to build on that," White said. "We don't just build on it to be Canadian; we aren't trying to say we have to build on it because the Americans aren't doing it right. We just think we have a sense of where we want to go and nobody can tell us we can't go there because we live close to the United States."

• There are three things negotiated in the U. S. agreements in 1982 that the Canadians do not want to see in their pacts. One is the guaranteed income stream (GIS) which provided a portion of wages and benefits to high-seniority laid-off workers until they reach retirement age or find other employment.

The Canadians are also not interested in profit-sharing unless the companies "come to us at the end of the year and say we've got extra profits and we want to sit down with the union and carve up those profits," White said.

He said the UAW will never agree to tie wages to profit sharing as has been suggested by GM in the U. S.

"The workers want to know what their wages are on an ongoing basis, he said. "Profit sharing and bonuses are for the entrepreneurs.

"The workers are not treated

Flax and McCosh expand staff of Automotive News

Arthur Flax and Dan McCosh have joined AUTOMOTIVE NEWS in a further expansion of the editorial staff.

Flax has been named assistant truck editor. McCosh has been appointed to the position of reporter, with special responsibility in the OEM area.

Flax comes to AUTOMOTIVE NEWS from Transport Topics, Washington, where he was a staff reporter. Prior to that, he produced an employe publication for the General Accounting Office and was a reporter-photographer for Truckers' News.

McCosh formerly was associate editor of Ward's Auto World. Earlier, he was managing editor of Ward's Automotive Reports and business editor of Observer-Eccentric Newspapers in Livonia, Mich. He is a 1983 Emmy Award winner for best writing, documentary category, for "Chrysler, then and now."

"We are pleased to welcome both of these experienced automotive reporters to our growing staff," said Keith E. Crain, publisher and editorial director of AUTOMOTIVE NEWS. "It is part of a continuing effort to make our coverage of this complex industry second to none."

Flax is a graduate of the University of Maryland; McCosh, of Michigan State University.

Co-sponsored, bipartisan effort would create new legislation

NADA offers new fleet-subsidy bill

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Co-sponsored, bi-partisan and rewritten, NADA's bill to abolish manufacturer subsidies for fleet purchases has been reintroduced in an effort to find a new tack through the House subcommittee stage.

Rather than amending the Robinson-Patman antitrust act, as the original bill would have done, the new fleet subsidy bill would create entirely new legislation.

This will remove the bill from the jurisdiction of the Judiciary Committee, where it had encountered some hostility, and leave it in the hands of the Energy and Commerce Committee.

But the co-introduction of H.R. 5305 by Reps. Wayne Dowdy, Mississippi Democrat, and Gene Taylor, Missouri Republican, got off to a rocky start last week with the abrupt cancellation of a Transportation Subcommittee hearing on the new bill.

• The latest legislative proposal on fleet subsidies differs from its predecessor, H.R. 1415, in allowing manufacture price breaks for government fleet purchases and for fleet buys by the American Red Cross.

Also, regional incentive programs by manufacturers will be allowed to stimulate slow sales areas.

Dowdy's signature on the bill is expected to aid the legislation since Dowdy sits on the important Energy and Commerce Committee through which the bill must pass.

While Rep. Taylor is a former auto dealer, his positions on the Rules and Post Office committees are not believed to give him the same leverage enjoyed by Dowdy.

The co-authors have collected an impressive 220 co-sponsors in the House.

The new bill, like the old, makes it unlawful for manufacturers to offer subsidies or incentives to rental companies, fleet buyers or leasing companies unless similar terms are made available to individual car buyers.

Zone offices receive live training broadcasts

Chrysler develops video network

By Gary Ruderman
Staff Correspondent

Chrysler Corp. is nearing completion of a $600,000 satellite transmission network for video teleconferencing.

Currently, 18 of 23 Chrysler zone offices around the U. S. receive live training broadcasts from headquarters in Highland Park, Mich. Chrysler is the only U. S. auto maker with a private video network.

"This means we can have discussions instead of reading reports) and then making a telephone call with questions," said Steven D. White, field operations manager at the Boston zone office.

The 10 - month - old Chrysler Satellite Network (CSN) is provided with interactive audio, giving the broadcast instant question and answer capability, via telephone lines.

Twice a month, White and his staff of 22 have coffee, take notes and watch the two-hour-long broadcast covering a range of subjects from sales training for auto dealers, technical training on new products, financial management of auto dealerships, corporate strategies, leasing programs and specialized data on high-performance vehicles.

One Chrysler dealer said the corporation plans to offer the satellite feed and teleconferencing packages to its 3,872 dealers within the next year.

Todd M. Putz, a partner in Four Flags Chrysler, Inc., Niles, Mich., viewed a Jan. 25 live broadcast featuring economist Alan Greenspan. Putz is looking forward to getting onto the broadcast network. Speaking of the January show, he said:

"It was more informative than having the individual speakers come out and speak. The broadcast brings out a lot of new ideas about where the company is going and how the company weathered the last three years.

"It will help in the future when we get telecommunications in our own dealership rather than driving to Detroit."

A Chrysler spokesman said the company is considering and examining a new telecommunications network between dealers and the factory using voice and video transmissions but said it would be premature to say the company is planning to offer the video teleconferencing option next year.

To save the overhead of maintaining its own satellite broadcast facility and production studio, the cost-conscious Chrysler network comes from studios at Detroit's public broadcasting station, Channel 56.

The program is broadcast live to the Westar 4 Satellite and picked up on a five meter (diameter) C-band receive-only dish outside the zone office.

Primary expenses are Channel 56's production costs and the Westar link, around $200 per hour. The five zone offices without the earth receiving station use nearby public broadcasting stations to view the shows.

In Boston, the shows are viewed on a 45-inch RCA TV. Broadcasts are made every week; fortnightly for the sales staff and twice a month for parts and service managers. The last 30 minutes of each show are dedicated to Q&A.

"We have all really enjoyed and used this tele-video conferencing in our office," said White in Boston.

"We're getting constantly updated on the corporate situation and talking aspects of business management when we work with the dealers. Questions are answered right away and issues are worked on during the sessions."

Robert Saltsman, director of the Chrysler Marketing Institute in Highland Park, said the hardware for each receiving station cost $15,000 and physical installation (construction of a concrete pad and necessary wiring) costs $16,000 to $20,000.

Domestics increase sales; imports dip from year ago

By Jenny L. King
Staff Writer

New-car sales for March and for the first quarter of 1984 showed their greatest strength in four years for the domestic auto makers, while imports were down from 1983 and skidded to their lowest market penetration since October of 1980.

The 25.96-percent domestic sales increase for the month was the third consecutive monthly improvement this calendar year and the 13th in a string which has become a bona-fide ladder out of a long recession.

Although several European imports posted record sales—some of them any-month records—the import restraints on the Japanese kept the volume down in March.

Domestic new-car sales got the spring selling season off to a proper start with a total of 56,164, up 25.96 percent from 600,303 in 1983 and best for March since 1979 when 864,271 retail deliveries were reported.

Import sales of 207,619 were down 5.83 percent from 220,479 last year. Their share of the market plunged to 21.54 percent from the year-ago March record of 26.86 percent.

Total sales in March reached 963,783, up 17.42 percent from 820,782 in 1983.

First-quarter domestic sales were up 36.91 percent, to 1,994,609 from 1,456,920. Imports barely squeezed by their 1983 first-quarter mark, up 0.30 percent, to 583,966 from 587,196.

Total industry sales were up 26.39 percent January through March, to 2,583,575 from 2,044,118.

• Every domestic auto maker except American Motors turned in improved sales reports in March. AMC was off 8.19 percent as its lineup no longer includes Spirit and Concord and is reduced to Renault Alliance/Encore and the AMC Eagle. AMC sales were at 16,788, down from 18,285 last year.

Ford Motor Co. enjoyed the

Chevrolet sets intro timetable for Suzuki, Isuzu, JV cars

DETROIT. — Chevrolet has notified its dealers that three new small cars will be phased into the Chevy lineup beginning May 31.

Coming first to 516 Chevy dealerships in nine western states is the Sprint, a four-passenger, 50-plus MPG two-door hatchback built by Suzuki.

Another new subcompact—called the Spectrum and available as both a two-door hatchback and a four-door sedan—will be offered in late fall through Chevy dealers in 16 Eastern states. It will be built by Isuzu.

The third new Chevrolet is planned for production startup late this year in Fremont, Calif., pending FTC final approval of the proposed General Motors-Toyota joint venture. Offered initially as a four-door sedan, it will be built by New United Motor Mfg., Inc.

Initial distribution of the Sprint will be through Chevy dealers in Hawaii, Alaska, Arizona, California, Washington, Idaho, Nevada, Oregon and Utah because first-year availability is limited to 17,000 units.

States where the Spectrum will be first offered are Connecticut, Delaware, Florida, Georgia, Maine, Maryland (and the District of Columbia), Massachusetts, New Hampshire, New Jersey, New York, North and South Carolina, Pennsylvania, Rhode Island, Vermont and Virginia.

Total volume through March, 1985, will be about 30,000 units.

GM planner, Debbink, to head Inland Division

DETROIT. — John D. Debbink, the man who directed the corporate review that led to the reorganization of General Motors' North American automotive operations, has a new job.

He has been named general manager of GM's Inland Division in Dayton, which makes a wide variety of componentry and hardware for GM vehicles. At Inland, Debbink succeeds Leonard P. Roberts, who died March 19.

John D. Debbink

Debbink, who will be 60 on April 24, was with Chevrolet from 1949 to 1974, rising to general director of purchasing, production control and traffic.

He became director of corporate product planning in 1974 and general manager of Delco Moraine Division in 1976. He was given the corporate review assignment in September, 1982.

One and a million

Volvo has built its millionth station wagon, a 240 Series, but the Duett Van, introduced in 1953, was the Swedish maker's first wagon. Primarily a utility vehicle, the Duett Van was based on the PV 444 and remained in production until 1969. Today, about 30 percent of Volvo's output is station wagons.

News roundup

Indonesian plant construction begins

JAKARTA, Indonesia. — Construction has begun here on a plant that will manufacture motorcycle and automobile engines. A joint venture between Suzuki Motor Co., Ltd., of Japan, and P.T. Musyawarah Cinta Suara, of Indonesia, the plant will have an initial capacity to produce 150,000 motorcycle engines and 25,000 car engines per year, rising eventually to 250,000 motorcycle engines and 35,000 car engines.

Chrysler profit sharing — what might have been

DETROIT. — Chrysler's U. S. hourly workers would have received checks for $2,939 in profit-sharing money and a quarterly wage bonus in 1983 if they had not rejected that plan in favor of upfront wage increases last year. The agreement ratified last September eliminated the profit-sharing plan and gave the workers a 3-percent annual wage increase and a 32-cent cost-of-living-allowance (COLA) which provided $1,659 in increases.

MIC ad agency opens Detroit office

DETROIT.—Gordon & Shortt, Inc., is opening a full-service Detroit office near the Renaissance Center to service Motors Insurance Corp., a GMAC subsidiary, and other advertising accounts. A staff of 16 will be headed by Peter Muhlberg, senior vice president who formerly was with Young & Rubicam.

Mitsubishi plans steel plant in U. S.

WASHINGTON.—Nissan's light truck plant in Smyrna, Tenn., is expected to benefit from a Mitsubishi Corp. plan to set up a steel sheet processing and distribution company in Tennessee this year. The plant will process hot and cold rolled sheets in coil, galvanized steel sheets, and electrical steel sheets. Other Japanese steel firms are said to be contemplating a similar move into U. S.-based steel processing.

Zimmer acquires boat builder

POMPANO BEACH, Fla. — Zimmer Corp. has acquired the assets and business of Black Fin Yacht Corp. in an exchange of stock. Black Fin, now a wholly owned subsidiary of Zimmer, manufactures offshore sports fisherman boats from 25 to 40 feet in length. Zimmer produces motor homes, van conversions, luxury automobiles and manufactured housing.

Korean auto industry sets record

SEOUL, Korea.—Korean vehicle makers enjoyed a record year in 1983, according to Korea Trade & Business. Sales increased 37 percent and totaled 211,232, including 24,454 units that were exported. Sales by leading makers were: Hyundai, 106,750; Kia, 63,077; Daewoo, 34,978, and Dong-A, 3,870.

Isuzu pursues joint venture in China

TOKYO. — Isuzu has reached a basic agreement with Mainland China for knockdown assembly of light commercial vehicles, according to a report published here. Isuzu will soon enter into negotiations with China for a joint venture to produce such vehicles there. Isuzu is dealing with two factories of Nanjing Automotive Industry Corp.

It's 27.54 pct. of registrations, lowest since 1979

Import market share slips for year

By Jenny L. King
Staff Writer

Registrations of new imported cars in 1983 dropped to their lowest level of total-market penetration in four years, according to the AUTOMOTIVE NEWS analysis of R. L. Polk & Co. registrations.

Imports claimed 27.54 percent of last year's market in the U.S., down from a record 29.26 percent in 1982 and weakest since 1979 when the imports' share was just 22.63 percent.

New imports totaled 2,457,357 in 1983, up 8.32 percent from 2,268,631 the preceding year.

December import registrations of 238,581 were up 13.16 percent from 210,832 a year earlier. For the month, they captured 26.23 percent of the market, down from 27.54 percent in December of 1982.

Five of the top 10 imports improved their market positions in December as an equal number found themselves slipping. Honda advanced 1.37 percentage points, to 16.77 percent from 15.40 percent. It was the only major Japanese auto maker to report a gain.

The other winners were European: Volvo, up 0.92 percentage points; Mercedes-Benz, up 0.38 percentage points; BMW, up 0.01 percentage points, and Audi, up 0.30 percentage points.

• Top importer Toyota lost 1.58 percentage points, Nissan was down 1.79 percentage points, Mazda dipped 0.96 percentage points, Volkswagen was down 0.15 percentage points and Subaru was down 0.15 percentage points.

Ten imports claimed 88.12 percent of the import market in December, down from 89.77 percent 12 months earlier.

For all of 1983, five makes were up, five off. As of December, Honda was up for the entire year, by 0.02 percentage points. Honda registrations include numbers for Accords built in this country. Nissan scored a greater calendar-year success: Up 0.67 percentage points, to 20.92 percent from 20.25 percent.

In 1983, Volvo increased its share of the market by 0.52 percentage points, Mercedes-Benz was up 0.08 percentage points and BMW was up 0.12 percentage points.

Losing ground were: Toyota, down 1.31 percentage points; Mazda, down 0.09 percentage points; Subaru, down 0.19 percentage points; VW, down 0.80 percentage points, and Audi, down 0.12 percentage points.

Ten imports accounted for 88.86 percent of the 1983 import market, down from 89.96 percent in 1982.

Japanese cars represented 72.97 percent of the import market in December, 1983, down steeply from 77.61 percent a year earlier. German-built cars climbed to 12.23 percent from 11.60 percent, U.S. imports (including VW Rabbits and Honda Accords) rose to 6.32 percent from 3.58 percent and Swedish cars claimed 5.25 percent, up from 4.03 percent.

Imports by country of origin in December, 1983 vs. 1982, were:

	Dec., 1983	Dec., 1982
Japan	174,085	163,631
West Germany	29,168	24,452
United States	16,275	7,555
Sweden	12,626	8,489
France	3,908	4,152
Great Britain	2,045	1,445
Italy	400	895
Ireland	74	214
TOTAL	238,581	210,833

For the entire calendar year, Japan claimed 76.50 percent of the import market in 1983, down from 78.10 percent a year earlier. Numbers of imports from specific countries year to year follows:

	12 Mos., 1983	12 Mos., 1982
Japan	1,879,787	1,771,857
West Germany	258,270	229,340
United States	127,629	96,159
Sweden	118,438	92,283
France	47,608	50,010
Great Britain	15,912	10,522
Italy	8,715	15,064
Ireland	998	3,396
TOTAL	2,457,357	2,268,631

Imported truck registrations were up 14.88 percent December to December: 51,739 vs. 45,039. Numbers from the major manufacturers were:

	Dec., 1983	Dec., 1982
Toyota	18,750	13,451
Nissan	11,894	13,637
Mazda	8,596	4,173
Dodge Ram 50	3,399	.....
Ford Courier	.....	3,420
Others	9,100	10,358
TOTAL	51,739	45,039

Calendar-year imported truck sales were up 12.71 percent for 1983 compared with 1982, to 495,569 from 439,700. The breakout includes:

	12 Mos., 1983	12 Mos., 1982
Toyota	174,860	147,542
Nissan	132,088	106,440
Mazda	70,795	38,058
Dodge Ram 50	32,759	31,975
Others	85,067	115,685
TOTAL	495,569	439,700

Leopold remodels Toyota dealership in Portland area

PORTLAND, Ore. — Irving Leopold has completed a $300,000 remodeling of his Toyota dealership in suburban Milwaukee.

The remodeled structure is elliptical in shape and has a six-car showroom, with all six models in front-row positions.

At one time, Leopold sold the British Motor Car lines, Toyota, Volvo and Rootes Hillman and Sunbeam cars out of a tent, an ancient trailer and a former church building.

The current Leopold operation covers a three-acre site and the newly remodeled building has 18 service stalls. He has a sales staff of 13 and a total of 45 employes.

COMING

As a part of your regular yearly subscription, we're sending you the single most important year-long reference source: the **1984 Market Data Book**. This inclusive annual source of car and truck vehicle facts and figures is far more than a statistics compilation. It includes detailed data, charts and analyses that help define industry patterns and trends in such areas as:

- **Retail price comparisons 1983-1984 for import and domestic vehicles**
- **Associations and buyers guide**
- **Options and accessories listings**

...and much more!

Look forward to this reference to compare the past with the present, to plan for the future.

Full-size and luxury models continue strong

Scarcity of clean units cripples U. C. market

Continued from Page 20

ager at Bill Cook Buick-Mazda, Arlington Heights, Ill., has a harder time explaining why sales are down at his suburban Chicago location.

"It is very slow," said Anderson. "I'm probably sitting with the best line of cars I've had in six or seven months and there is no traffic. Everyone else I have talked to around here is in the same boat and they can't figure it out.

"We've had a lot of new-car buyers, but there is still that guy out there who can't afford to buy a new car and we're not getting that person," he said. "I've been selling older, cheaper cars — '75s, '76s and '77s. I'm selling cars for $1,000, but the nice cars for $5,000 are not selling.

Smith said his February and March sales in Iowa were slowed primarily by heavy snow.

"I had a real good year last year and I expect this year to be better," he said. "But we're getting a real bad start because of the weather."

Nicholson said he has also been plagued by bad weather in Ohio, but speculated that sales have also been suppressed by the red hot new-car market.

"I'm happy to see new-car sales strong," he said. "I don't mind a few slow months here if it means people are buying new cars instead. Some of our problems have resulted from depressed new-car sales."

Several dealers report that full-size and luxury models have been the most reliable sellers so far this spring.

"The market heavies are very strong right now," said Massey. "The subcompacts are very slow and the intermediates decent. But the big cars, the Town Car, Fleetwood, Sedan DeVille, Coupe DeVille, they are really hot."

Massey said those models are selling well in a vintage from 1978 through the current model year.

Wear described the best sellers as "luxury cars, loaded all the way, starting with the '80 model year, but especially '82 and '83."

"Heavy cars are still moving well," said Glover. "If they are nice, clean and have low mileage, they'll sell, and bring good money, too. We sell 60 percent bigger cars."

Several others reported success with well-equipped luxury and full-size models, but a few outlets have had trouble moving big cars.

"The big boats are not what are selling," said Block. "It is going to cost $350 a month on some of those and that is a little too much for a used car."

Block said higher interest rates and shorter-term loans on previously owned cars mean that monthly payments may surpass those of much more expensive new cars.

"The cheaper cars in good condition are selling best," said Anderson. "I couldn't give an Electra or Park Avenue away if my life depended on it. For some reason, I'm sitting with about six big Electras and getting no play on them whatsoever."

Tony Curiale, owner of New Rochelle Dodge, New Rochelle, N. Y., said the luxury cars which draw interest on his used-car lot are not expensive, top-of-the-line editions, but rather such well-equipped mid-sized models as Cutlass, Century, Diplomat and LeBaron.

• Sporty models have begun to emerge as stellar performers in some spring markets. Mills said his Florida dealership has done well with late model Camaros, Challengers, Sapporos and LeBaron convertibles.

"Our hottest cars are the sport models; the convertibles, T-tops and mid-sizes," said Mills. "I think it is because spring is in the air here."

Anderson said he is buying "as many (Mazda) RX-7s as I can get my hands on for the spring market," and several other outlets report no slackening in the demand for used sporty cars.

"Any sport-type car, such as a Camaro, is hot," said Glover. "It doesn't make any difference what year it is. If it is a 1967 model and it is sharp, it will sell. I just sold a '69 Camaro for $4,295."

In Massachusetts, Michaels said he has found acceptance for "anything front-wheel drive," including the much-maligned General Motors X-body models of the early 1980s.

"As soon as we get them, we roll them out," he said.

Smith said his Buick dealership in Iowa has done well with used Skylarks and Citations during the past three years despite negative X-car publicity.

Demand has also been high for GM intermediates, such as the G-body Grand Prix and Cutlass Supreme models, according to Michaels. The Pontiac dealer also noted strong sales for GM station wagons.

Curiale said his Dodge dealership has found plenty of buyers for used K-cars and K-car wagon versions. Block also cited a strong market for "mid-sized FWD cars."

Not all retailers have had trouble moving subcompacts, but few are enthusiastic about small-car sales this spring.

"The late model little cars are cold," said Nicholson. "The older small cars do better once they get down in the transportation bracket. There is no overwhelming supply of buyers for '81 and '82 small cars."

Diesel-powered cars continue to suffer from the stabilization of gasoline prices and bad publicity about the GM 5.7-liter V-8 engine installed in Olds, Cadillac, Chevrolet, Pontiac and Buick models from 1978 through 1981. Several retailers cited continuing slow sales for diesel models in the used-car market.

In general, dealers also reported trouble moving some used vehicles which may be perceived as dull.

"I don't sell a lot of four-door sedans," said Gossett.

"Your normal four-door Chevette and Citation are just plain cold," said Massey.

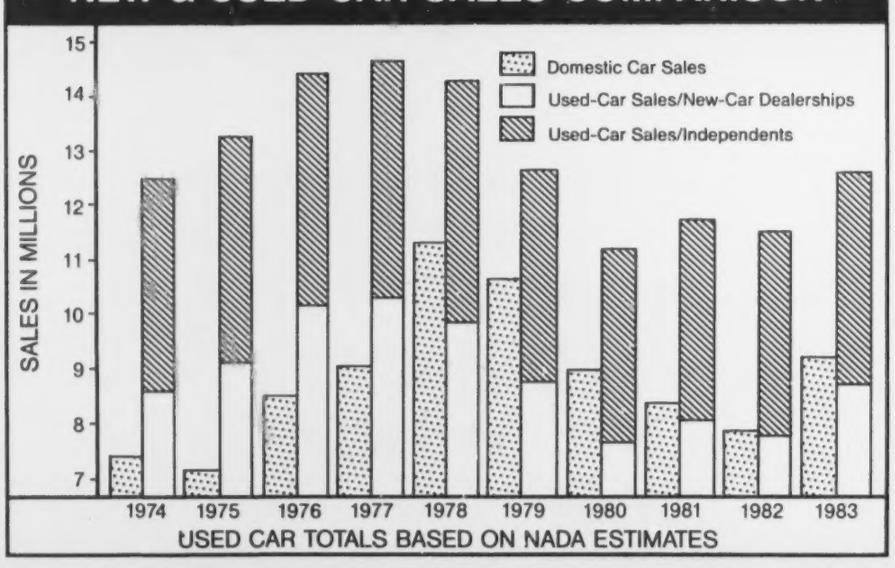
NEW & USED-CAR SALES COMPARISON



Imports down from year ago

Domestic sales up 25 pct. in March

Continued from Page 8

biggest sales surge among the larger domestics. Ford was up 31.31 percent, to 183,537 from 139,779. General Motors was up 27.99 percent, to 449,462 from 351,166. Chrysler Corp. reported 89,253 passenger-car sales, up 8.65 percent from 82,150 a year earlier.

Volkswagen sales were up 12.09 percent, to 7,090 from 6,325, and newcomer Honda again outsold the Rabbit-maker with its 10,034-unit total, up 286.22 percent from 2,598 in 1983.

GM claimed 59.44 percent of the domestic market in March, up from 58.50 percent. Ford had 24.27 percent, up from 23.29 percent. Chrysler slipped back to 11.80 percent from 13.68 percent. Also skidding were AMC, down to 2.22 percent from 3.05 percent, and VW, down to 0.94 percent from 1.05 percent. Honda expanded to 1.33 percent from 0.43 percent.

Both Buick and Oldsmobile announced sales records for March. Olds said the total of 106,337 was second-best for any month in its history. Buick was up 17.06 percent and Oldsmobile was up 14.94 percent over last year.

Pontiac had the largest sales increase among the five GM car diviisons: Up 54.80 percent. Chevrolet was up 43.02 percent, while Cadillac was off 4.19 percent.

At Chrysler Corp., Plymouth sales were down 3.94 percent, Chrysler was up 13.13 percent and Dodge was up 18.20 percent. Ford Motor figures showed Mercury up 35.99 percent, Lincoln up 46.51 percent and Ford Division up 27.96 percent.

AMC was down 62.10 percent, and Renault was up 11.84 percent.

With 27 selling days in the month both this year and in 1983, the recent daily-selling rate of 28,006 was up 25.96 percent from 22,233.

• Import sales in March included monthly records for Audi, BMW, Jaguar, Mercedes-Benz, Saab and Volvo. BMW reported a record first quarter, and Saab and Mercedes had their highest sales for any month in March, 1984.

Nissan sales of 43,024 were down 12.59 percent from 49,223 last year, but put it ahead of arch-rival Toyota whose sales of 39,274 were down 23.75 percent from 51,505. Honda imports were up 22.14 percent for the month and when those 36,592 units were combined with the 10,034 assembled in Ohio, the 46,626-units result was very impressive.

Mazda was down 17.95 percent and Subaru was off 19.09 percent. Volkswagen was up 28.83 percent, Porsche was up 17.12 percent and Peugeot kept just a step ahead of its year ago total: 1,672 vs. 1,629.

The market-class breakdown in March included domestic intermediates with 27.83 percent, imports at 21.54 percent, compacts at 18.05 percent, subcompacts at 14.55 percent, standards at 10.67 percent and luxury models at 7.36 percent.

Excluding imports, the market spectrum featured intermediates at 35.47 percent, compacts at 23.00 percent, subcompacts at 18.54 percent, standards at 13.61 percent and luxury cars with 9.38 percent of the total.

• In the first quarter, GM sales were up 34.69 percent over last year; Ford was up 46.14 percent; Chrysler was up 28.33 percent; AMC was up 2.48 percent; V Wwas up 20.44 percent, and Honda was up 470.73 percent.

GM claimed 58.56 percent of the first quarter, domestic market, down from 59.52 percent a year earlier. Ford earned 24.46 percent, up from 22.92 percent. Chrysler held 11.99 percent, down from 12.79 percent. AMC dropped to 2.48 percent from 3.23 percent. VW sales accounted for 1.05 percent, down from 1.19 percent, and Honda carved out 1.46 percent, up from 0.35 percent.

March 21-31 domestic sales were up 18.30 percent, to 313,443 from 264,963 last year. It was the strongest total for the late-March period since 363,006 in 1979. GM was up 22.18 percent, Ford was up 23.28 percent, Chrysler was down 6.34 percent, AMC was off 19.06 percent, VW was up 21.92 percent and Honda was up more than 400 percent.

Shares of the late-month domestic market included: GM with 58.43 percent, Ford with 24.83 percent, Chrysler with 11.56 percent, AMC with 2.33 percent, Honda with 1.60 percent and VW with 1.25 percent.

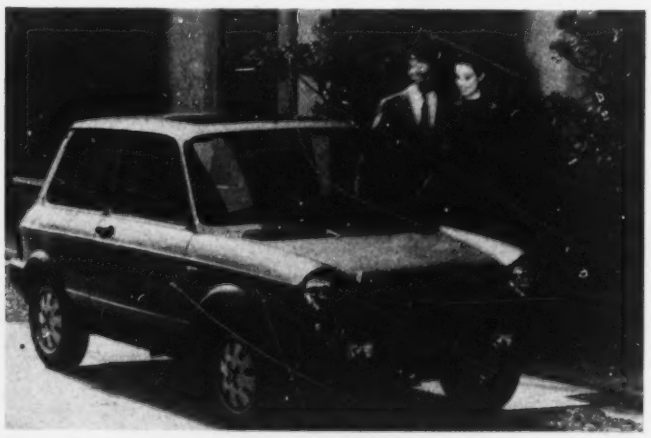
There were 10 selling days in the period both this year and last, yielding a current 18.30-percent increase, to 31,344 from 26,496.

Based on late-March sales, the annualized rate of travel figured to 7,419,000.

Moffatt elected to head auto medicine group

ARLINGTON HEIGHTS, Ill. — Dr. Edward A. Moffatt, of Orinda, Calif., has been elected president of the American Assn. for Automotive Medicine.

Moffatt is president of Biomech, Inc., and formerly was with the General Motors Engineering Staff.



Innocenti goes diesel

Three-cylinder one-liter diesel built by Daihatsu in Japan powers new Innocenti MiniDiesel. It reportedly tops 90 MPG at 55 MPH.

Canadian UAW goes independent in negotiations

Continued from Page 3

like executives and it infers that if you get into profit sharing there is going to be some great equalization. That is nonsense. It is not going to happen."

Another program negotiated in the U. S. in 1982 was language on outsourcing, but White said that is not of any interest to the Canadians. He said that kind of program should be left up to the government in the form of local content.

The UAW, auto companies and other groups are currently pushing the Canadian Government to pass 85 percent local-content legislation.

"We will raise the issue with the corporation if we think they are taking something out," White said. "As far as I'm concerned, the question is whether or not our country is going to make a decision on future trading relationships. We cannot assume that responsibility in bargaining.

"If GM, for example, decides to shut down a plant in Canada, we cannot prohibit them from doing that. We can write the language but they aren't going to agree to it."

†Estimate

Car production highest since 1979 for both periods

Output climbs for March, quarter

By Joe Wilssens
Staff Writer

Domestic auto makers finalized production totals for March at 801,845 units, substantially higher than earlier estimated. The total build for the month was 39.50 percent over the 574,535 assembled in the comparable 1983 month.

It was the highest total for any month since 826,678 units were completed in June, 1979, and the best showing for March since 889,775 were finished in 1979.

The manufacturers assembled 2,175,643 cars in the first quarter this year, up 44.64 percent over last year's 1,504,278. It was the highest first quarter production since 2,415,422 were built in the first three months of 1979.

With overtime hours scheduled at 19 assembly facilities last week, domestic manufacturers slated production of 170,351 units, down 6.29 percent from 181,775 built the previous week, but 35.52 percent better than 125,702 units finished during the year-ago week.

So far this year, 2,345,964 cars have been completed, a 43.54 percent gain from 1,634,385 units finished at this time last year.

Breakdown for the week by company was: General Motors, 56.52 percent, Ford Motor Co., 22.57 percent; Chrysler Corp., 15.17 percent; American Motors, 2.82 percent; Honda, 1.54 percent, and Volkswagen of America, 1.38 percent.

Facilities working two Saturday (April 7) overtime shifts at GM were Detroit, Flint (B, D and G lines), Framingham (Mass.), Lordstown (O.), Oklahoma City and Van Nuys (Calif.).

Eight Ford plants put in extra daily hours last week. They were: Atlanta, Chicago, Dearborn, Edison (N. J.), Kansas City, Lorain (O.), St. Louis and Wayne (Mich.). Atlanta, Kansas City and Wayne also scheduled Saturday overtime.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two 9-hour daily shifts while Jefferson (Detroit) worked two 8½-hour daily shifts last week. Newark also worked two 8-hour overtime shifts on Saturday.

Chrysler dealt 2 setbacks on GM-Toyota documents

WASHINGTON.—Chrysler Corp. was dealt two setbacks by the FTC last week, in the company's efforts to secure documents pertaining to the FTC's handling of the General Motors-Toyota joint venture (JV) investigation.

Chrysler is suing GM and Toyota to stop the venture.

The FTC denied a Feb. 7 request by Chrysler for information about the status of waiting periods required by the Hart-Scott-Rodino Act before GM and Toyota may begin their joint venture.

Chrysler had also asked to know the nature of the documents and the questions the FTC asked Toyota concerning the venture, and to what extent Toyota complied with the FTC's inquiries.

On Feb. 22 Chrysler filed a second petition with FTC—also denied—asking the commission to extend the public comment period on the JV and for reconsideration of the FTC's decision not to release certain material associated with the investigation.

Regarding Toyota's cooperation, the FTC told Chrysler that nothing in its rules or statutes provides for an inquiry into FTC procedures.

As far as the FTC's deletion of material from the public record was concerned, the agency said the deleted material was properly withheld under (commission) standards."

Mack increasing truck production at three plants

ALLENTOWN, Pa. — Mack Trucks, Inc., has announced production increases that will boost output 30 percent above March levels when fully implemented early in July.

Production, which had been 116 units a day at assembly plants in Pennsylvania and Oakville, Ont., has been increased to 132 units a day. On June 18, it will be stepped up to 149 units and on July 2, it will rise to 152.

Mack said the July rate will approach the company's alltime production high of 166 units a day set in 1979, the best year ever for sales of heavy trucks in the U. S.

Production of 47 units a day scheduled for June at the Macungie (Pa.) plant will mark the highest utilization of capacity since the plant was opened in 1975.

In July, the Allentown plant will be building 83 units a day and the Canadian facility will be turning out 22, Mack said.

9 truck plants work overtime; 60,874 assembled

Nine truck plants scheduled overtime hours last week enabling domestic truck manufacturers to complete 60,874 units. The total was down 5.71 percent from the previous week's 64,560, but led the year-ago week's 42,135 build by 44.47 percent.

Year-to-date, 866,569 trucks have been completed, 56.59 percent better than 553,408 finished during the year-ago period.

All six of Ford Motor Co.'s truck assembly facilities worked additional daily hours last week with the Kansas City plant also putting in extra hours Saturday (April 7).

At General Motors, Lordstown (O.) and Pontiac No. 5 worked two Saturday overtime shifts while the company's Detroit facility worked one overtime shift Saturday.

Canadian output holds steady with 24,136 for week

Canadian auto makers slated production of 24,136 cars last week, down 30 units from the prior week's 24,166. The total was 22.28 percent better than 19,739 assembled in the year-ago week.

To date this year, the manufacturers have built 309,621 autos, up 21.09 percent from the 255,699 completed during the same period last year.

Truck assembly last week was targeted at 17,617 units, 4.26 percent ahead of 16,898 built the previous week and a strong 48.13 percent improvement over 11,893 trucks completed in the year-ago week.

So far this year, truck production has climbed to 232,400 units, a 76.29 percent improvement over the 131,828 trucks assembled at this time in 1983.

Chrysler Corp. estimated production of 2,370 Dodge Caravans, 2,190 Plymouth Voyagers and 912 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 60,225.

Future Ford

Jim Dunne

LTD replacement

Designed and built for the upper-middle U. S. market, the front-drive Taurus replaces the rear-drive LTD in Ford's 1986 lineup. With a 106-inch wheelbase and overall length of 195 inches, the four-door sedans and station wagons will be driven by standard four-cylinder engines. A six is optional. Mercury's counterpart is tagged Sable.

But actual count edges upward

Stockpile cut to 56 days

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers managed to add some new cars to the stockpile of U. S.-built units during March, but sales were strong enough to trim the inventory to a 56-day supply April 1, down from 59 days a month earlier.

The April 1 inventory totaling 1,579,155 units, compared with 1,537,290 a month earlier. A year ago, the domestic new-car inventory totaled a much lower 1,235,313 units on April 1, but the 55½-day supply almost equaled this year's.

There were shortages in some lines and longer waits for orders than customers like, but by and large the industry prefers these kinds of problems to those caused by burdensome stocks.

While certain models were in short supply, the overall inventory was remarkably well-balanced, both among the corporate makers and among the market segments.

The decline in the supply during March was entirely the result of General Motors trimming its inventory to a 53-day supply from a 58-day stock a month earlier. All other corporate makers increased their days-supply figures, except Ford Motor Co., which remained unchanged at 57 days.

The GM trim was accomplished despite the fact that the corporation actually had more units in stock April 1 than it had March 1. But a stronger selling rate resulted in the lower days-supply figures.

Ford Motor Co. added some 12,000 vehicles to its new-car inventory, but its stockpile held steady at 57 days, again because of a higher sales rate.

At GM, individual car line stocks ranged from 12 days for Fiero, which was shortest in the industry, to 112 days for Cimarron, heaviest in the industry.

Shortest at Ford Motor Co. was the Lincoln Town Car at 21 days, while its heaviest was also a Lincoln, the Mark VII, at 85 days.

Chrysler Corp. had a 67-day supply April 1, up from 65 days a month earlier. Chrysler's stocks ranged from a 37-day supply of Plymouth Gran Furys to an 87-day stock of Dodge 600s.

American Motors had an 86-day supply of cars April 1, up from 70 a month earlier, while

Table on Page 67.

Volkswagen of America was up to 100 days from 88 and Honda had managed to build up a 20-day supply of U. S.-built Accords, from 13 days March 1.

The April 1 domestic new-car inventory was divided this way: GM, 56.00 percent; Ford Motor Co., 24.45 percent; Chrysler Corp., 14.01 percent; AMC, 3.39 percent; VWoA, 1.67 percent, and Honda, 0.48 percent.

A month earlier, the domestic inventory was divided as follows: GM, 56.85 percent; Ford Motor Co., 24.36 percent; Chrysler Corp., 13.54 percent; AMC, 3.38 percent; VWoA, 1.53 percent, and Honda, 0.34 percent.

• By size class, subcompact and compact segments were above the industry average in days supply and intermediate, standard and luxury below it, but

Service Index scores history's biggest gain

By Francis J. Gawronski
Service Editor

A long-standing Service Index record was shattered in February when the service and parts business in the nation's new-car dealerships increased by 26.2 percent over the volume reported for the same month in 1983.

The highest previous rate of increase for any month since the Service Index was established by Automotive News in 1961 occurred in November, 1971, when volume jumped 22.1 percent over that for same year-earlier month.

February also marked the 10th consecutive month in which shop volume registered an increase over the year-earlier month.

Dealers attributed February's record advance to a variety of reasons. However, the most frequently mentioned reason was the general improvement in the economy.

"People really believe the recession is over and are spending more for the repair of their cars," a dealer in the East noted. "Gasoline prices have stabilized at a reasonable price and people are driving more and spending more on their vehicles."

Another dealer said the upswing in new-car sales during the past year has a direct bearing on increased shop volume "because people are bringing their vehicles into the dealer-

Sales of All Parts and P&A	+28.7%	+27.6%

*—Survey by Automotive News shows that dealers' service and parts business in Feb., 1984, was 126.2 percent of business in Feb., 1983. Service business in the two months of 1984 was 122.0 percent of business in the corresponding period in 1983.

GM-Toyota venture wins FTC blessing

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — As expected, FTC, by a vote of 3 to 2, last week gave its final approval to the General Motors-Toyota joint venture to build small cars at GM's plant in Fremont, Calif.

But, in fact, the actual incorporation of NUMMI (New United Motor Mfg., Inc.) occurred Feb. 22 because the commission voted—again by that 3-to-2 margin—to allow it to happen before the end of the waiting period required by the Hart-Scott-Rodino Act.

Controversy is still swirling about both actions and Chrysler Corp. has filed suit to block the deal and to force the FTC to release more data.

Rep. James J. Florio, New Jersey Democrat, has introduced a bill for a moratorium on mergers and joint ventures (specifically ones like the GM/Toyota deal). But even if it were to beat all odds and become law this year, neither it nor the Chrysler suit would be likely to have any effect. Once an omelet is made, it is difficult to return it to eggs.

Chrysler last week said that the FTC action "comes as no surprise. It merely confirms that this whole sad story has demonstrated from the beginning that these three commissioners are determined not to be confused by the facts."

Chrysler said it continues to believe that the GM-Toyota venture is an illegal combination between two of the three biggest and strongest car companies in the world and that it "clearly violates the nation's antitrust laws."

GM Chairman Roger B. Smith will be in Japan this week. He will visit Isuzu and Suzuki and will make a "courtesy call" at Toyota.

• The reality is that NUMMI will exist for 12 years (from the date the first car is made or

Continued on Page 69, Col. 1

New Buick, Olds and Cadillac models draw upscale import trades

GM C-cars enjoy rousing welcome

By Richard Johnson
Staff Writer

Customer response to General Motors' new front-wheel-drive C-cars has been excellent in the first days since the downsized Buicks, Oldsmobiles, and Cadillacs went on sale, according to an Automotive News survey.

Enthusiasm is tempered somewhat by limited availability of the 1985-model luxury cars, which include the Oldsmobile Ninety-Eight Regency and Regency Brougham, Buick Electra, Electra T-type and Park Avenue, and Cadillac DeVille and Fleetwood.

But while supplies are low, GM has plans to nearly double the current output of front-drive C-cars, and most dealers say they expect the new-generation autos to be plentiful by early summer.

Meanwhile, many retailers are breathing a sigh of relief over the way the C-cars have been received since they went on sale April 5.

Several dealers have admitted

$4,995 is target of Chevy Sprint in Puerto Rico

SAN JUAN, Puerto Rico.—Chevrolet this week will introduce its new Chevrolet Sprint here at an aimed-for price of $4,995. Currently, the lowest-priced General Motors car in Puerto Rico is a Chevette at $6,400. In the U. S., Chevrolet prices a Chevette Scooter at $4,990.

Coming: A Golf that will go

DETROIT.—Coming down the road from Wolfsburg and Troy: A Golf GTI powered by a 16-valve 1.9 liter engine for the U. S. Gauges will be digital, tires lower profile. Engineers are working on the GTI now, but it won't be the first GTI with the new Golf body. That one is due next year, and will be powered by an engine with more pep than the present 1.8-liter. The 1.8 will be standard on all Golfs next year.

GM buyers get $10,000 seat-belt insurance

DETROIT.—In an effort to increase seat-belt usage, General Motors is including a one-year $10,000 seat belt user insurance certificate at no extra cost with every new GM car

Will build cars for three divisions

Olds Lansing complex prepares for GM20

By Jenny L. King
Staff Writer

LANSING. — The plant where America's most popular car in 1983 was built is shut down. It will reopen in a few weeks with all-new products being assembled on the lines, including makes never before built on these premises.

Oldsmobile's Olds/Fisher-Lansing complex, site of Cutlass Supreme assembly until the first week in April, is the new home of the 1985 GM20 cars. The complex will continue to have a 120 car-per-hour capacity after change-over and it will remain GM's largest car assembly facility in North America, according to Oldsmobile.

But for the first time in its almost nine-decade history, Oldsmobile will put together cars other than its own.

"We have never assembled Buicks, Pontiacs or any other division's nameplates," said James C. Rucker, director of products, strategic and business planning at Oldsmobile.

"Thus, GM20 will change that 86-year tradition. Now, we will build GM20 cars for three divisions — Oldsmobile, Buick and Pontiac," the GM20 program manager told reporters at a plant preview.

Six speakers described the technology and procedures and the role of employes in the new cars, the Oldsmobile Calais, Buick Somerset Regal and Pontiac Grand Am.

Mid-May, the body parts lines are expected to be functioning. June 18 is target date for completion of the first production GM20 car.

Sixty-one test vehicles already have been built, Rucker told his audience of newspaper reporters and various GM management and labor representatives.

"The prototypes were built with the help of some of our assembly plant hourly personnel. This is double innovation," he said. "Sixty-one is a large number of test vehicles, and prototypes are usually built by engineers, not by assembly plant people."

Some three million hours of training for both Oldsmobile and Fisher Body-Lansing people precedes startup of the GM20 run. Training began a year ago with persons who would be installing the new equipment.

The current educational efforts focus on 2,500 hourly and salaried employes, for a minimum of 80 hours each, who will be most directly involved in assembly of the new two-door passenger cars.

The Oldsmobile/Fisher-Lansing facilities will be the most integrated of any GM plant location, according to Oldsmobile. All major sheet metal parts for the cars will be produced at Oldsmobile's stamping plants and shipped next door to the Fisher facility four times a day.

There, the sheet metal parts will be assembled into bodies, painted, trimmed — with 70 percent of the welding work done by robots, compared with the recent 10 percent — then trucked immediately to Olds' two final assembly plants less than two miles away.

• The Fisher-Lansing and Oldsmobile facilities will use more robots than now are on line in any other GM assembly facility: A total of 219.

A "master cube" measures sheet metal fits and general build specifications. Tens of thousands of mathematical data points, plotting the perfect GM-20 vehicle, are computer-stored. A scanner, large enough to encompass the entire vehicle being tested, has the ability to scan the metal surfaces and compare them with the master data base.

The cube serves a number of functions, beginning as a gauge with prototype parts. It is a diagnostic tool prior to production and will be a watchdog helping maintain process control once production begins.

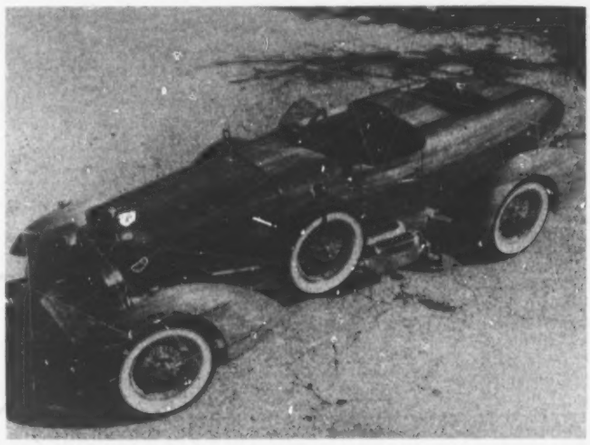
Extensive application of an Automatic Guided Vehicle System will allow major portions of the new cars to be built in station, with each operator able to stop the process to make immediate corrections as needed.

Vendors are expected to ship 100 percent to specification, Rucker said. No receiving inspection is planned.

Fisher Body's $80-million paint department addition features a clean room enclosing all paint preparation and spray booth areas. There, temperature and humidity levels will be automatically controlled and, with positive atmosphere, air flows out rather than in when any door is opened.

Other similar precautions reduce the risk of contamination in the multi-coat high-gloss enamel paint processing technique.

The Oldsmobile Calais, to be marketed primarily to 25-to-44-year-olds, will be available as a two-door with choice of two engines and manual or automatic transmission in the 1985 model year. Four-door sedans are planned the following year.



An automotive sculpture

Camelot Classics Corp., Ventura, Calif., handcrafted this automotive sculpture called the Phariance. It is constructed of hickory, Honduran mahogany and brass and is the result of a two-year effort by Camelot's founders, Fritz R. Huntsinger and Ray Kinney. It will be on display at museums and art galleries.

Luxury cars, trucks figure in House tax bill

WASHINGTON.—The House has passed a mammoth tax bill designed to increase revenues by $49.2 billion over the next four years.

The bill would limit tax credits and deductions on luxury cars used for business purposes to $21,000 and eliminate demonstrator cars as a taxable fringe benefit for auto salesmen as long as the cars are used primarily for business.

It would also limit the highway use tax on heavy trucks to $500 per year maximum and increase diesel fuel taxes to 14.5 cents per gallon on vehicles weighing more than 10,000 pounds.

Meanwhile, the Senate passed its own considerably different tax package.

Included in the Senate package is a provision to declare open-end auto leases as leases, not conditional sales, for tax purposes.

Other provisions are: Requiring luxury cars to be used at least 90 percent for business before their owners can claim tax benefits and deductions; reducing the tax on methanol vehicle fuel from 9 cents to 4½ cents per gallon; adopting the Reagan Administration's enterprise zone tax bill, and making various changes in heavy truck and fuel taxes, including exempting piggyback trailers from sales tax.

The House and Senate will meet in conference after the Easter recess to create a single tax bill.

Bitterness grows in design and engineering areas

Salaried staffs rip Ford programs

By Marjorie Sorge
Labor Editor

Salaried workers at Ford Motor Co. with good job reputations can get a "Golden Handshake" to quit.

The Ford plan, called the Career Progress Review Program, is open to salaried workers with satisfactory or above-average job reviews who want to leave the company.

News Analysis

The workers are given an office and access to a phone for about a month to look for a new job and Ford personnel also help them sharpen their resume skills.

Then, depending on the years of service, Ford will pay the workers 50 percent of their salary for one to 20 months. And some company-paid insurance benefits are continued for at least 13 months. All coverage stops if the worker gets a new job unless he or she is over retirement age.

Many salaried workers are questioning Ford's motives in these programs, complaining that all the older workers are leaving, only few young ones are being hired and retirees are not being replaced.

They question the future of Ford as a viable operation in the U. S. without a core of older workers to train the youngsters. Most of the complaints are coming from the technical and engineering communities. Few of those workers have participated in the "golden handshake."

According to some older workers, those over 50 are "fed up" with the company and are just biding their time until they qualify for 30 and out or until "their kids get out of college."

Others are taking advantage of the golden handshake and finding work at job shops for sometimes up to $70,000 a year, according to some salaried people. Others are going to work at American Motors, Chrysler Corp. or General Motors where the pay scale is higher.

While the maximum monthly pay for a Grade B Senior Designer at Ford is $3,035 plus cost-of-living-adjustments (COLA), the equivalent classification at Chrysler gets $3,305; at AMC, $3,694, and at GM, $3,829, all plus COLA.

Ford has been on an austerity program to trim down the workforce and cut other costs. But many of the workers left in the design and engineering areas are bitter about cuts in benefits and what they consider to be less than sufficient profit-sharing checks.

They are also angry about reductions in the workforce and are worried that they could be next.

In early 1980, Ford announced it intended to make severe cuts in its workforce to trim away layers of management and other layers of fat.

In North American Automotive Operations, the workforce has dropped about 25 percent from 53,127 on Dec. 31, 1979, to 39,916 by Dec. 31, 1983. In the technical and engineering community, cuts amounted to about 20 percent from 16,686 for year-end 1979 to 12,903 for year-end 1983. (This includes only product engineering, not manufacturing engineering.)

According to a Ford spokes-

Special Edition Isuzu Impulse

In celebration of its first anniversary, Isuzu's Impulse will be available in a limited number of Special Edition versions. Unique to the SE model of the GT coupe are its dark metallic charcoal color, goldtone striping and wheel color, special interior fabric and leather-wrapped steering wheel. Price is about $12,000, Isuzu said.

Lansing to begin output June 18 on GM20 cars

LANSING. — Assembly of the first of the GM20 cars, Oldsmobile Calais and Buick Sumerset Regal, will start here June 18. A second line producing Calais and Pontiac Grand Am will start up Aug. 6, Oldsmobile manufacturing specialists told a press gathering here.

The GM20 is the designation for the front-drive cars fitting in size between the A-body and J-body cars.

On March 6, production of Olds 88 and Ninety-Eight stopped and the lines will be down for 20 weeks. On April 6, the newer Cutlass lines shut down for 10 weeks

"For the first time in a long time our assembly lines fell silent. For many months the 88, Ninety-Eight and Cutlass lines were on all the overtime our local contract allowed," said Joseph J. Sanchez, Oldsmobile general manager.

Startup plans call for three shifts initially — two in one assembly plant and one in the second — instead of four shifts on rear-wheel-drive production. Output will be increased to four shifts — two on each line — early in the model year, Sanchez said.

Council chairman hails new franchise

Ford of Canada revises dealer pact

By Richard Johnson
Staff Writer

After two years of negotiations, Ford of Canada and its dealer body have put together a revised sales and service agreement that includes new protections against overdealering and excessive fleet sales outside the franchise network.

The new Ford agreement gives Canadian dealers provisions not currently available to their U. S. counterparts, but dealer groups in both countries say differences in U. S. and Canadian auto franchising laws make a direct comparison difficult.

Gilles Richard, chairman of the Ford Dealer Council in Canada, has hailed the new pact as "a leader in automotive industry sales agreements."

Ralph Forbes, president of the Federation of Automobile Dealer Assns. of Canada (FADA), called it "a considerable improvement over our previous agreement."

The dealer council negotiating committee, working with FADA, reached agreement on several issues which dealer representatives say benefit franchise-holders.

The dealer groups are especially enthusiastic about the new fleet sales provision, which calls on the company to formally recognize the dealer distribution network. Ford of Canada has agreed to report direct-sales totals to dealers and compensate outlets which service vehicles sold directly by the company.

The new standard on overdealering requires Ford of Canada to follow the same procedures that govern the opening of new sales outlets when filling dealer locations vacated for a year or more. The company must notify and make market data available to dealers, who have the right to challenge decisions through Ford's internal appeal procedure.

• The agreement covers 639 Ford and Lincoln-Mercury dealers in Canada. Signing by individual dealers throughout the country is slated to take place this summer.

"We're very pleased with the new agreement," said Forbes. "Ford of Canada management showed a willingness to listen and a general interest in dealer concerns. The negotiating units didn't always agree, but they communicated and I think that is an important attitude."

"We are very, very satisfied," added Richard, a Ford dealer in Montreal.

Duncan Read, FADA's director of industry relations and a key figure in the Ford agreement negotiations, said the two sides overcame some fundamental differences.

"Both parties initially took some positions from which they said they would not budge," he said. "But I've got to stress that there was a lot of fair-minded negotiations on both sides."

A spokesman for Ford of Canada said the new terms reflect a "periodic re-edit of the agreement."

"We're reluctant to discuss it publicly since it has not been seen and approved by the dealer body," he said.

Read, an attorney, said basic differences in U. S. and Canadian law make it hard to compare documents. But, overall, he judged the new Ford of Canada pact superior to sales and service terms for Ford dealers in the U. S.

"I have my Canadian bias, but I think this agreement is much better than the U. S. agreement," he said. "It does a number of little things which give the dealers in Canada more control over their businesses. It is significantly better than what they had before, and I suspect it is better than the U. S. (Ford) agreement."

• Read said the new Ford dealer package ranks high among all manufacturer- dealer agreements now in place in Canada.

"If the GM agreement (which expires in Canada and the U. S. in late 1985) improves as much as this one, the GM dealers will be very happy," he said.

"I think, frankly, the Canadian agreement is as good as (Ford's) U. S. agreement and in many respects I feel it is superior," said Forbes. "But, of course, U. S. laws differ from Canadian laws."

Earl Quist, an associate director for communications/industry relations at NADA, said he has reviewed the Canadian agreement, but has not checked it closely enough to draw comparisons with Ford dealer provisions in the U. S.

"I haven't compared it side by side with the U. S. agreement," he said. "I'm told by the dealer association up there that they have made some advances for dealers, but I really couldn't comment."

Quist noted that the U. S. Ford agreement does not include specific language to protect dealers from direct fleet sales by the company.

"The greatest single thing about this agreement is that Ford of Canada actually does recognize that the dealer network is its primary distribution system," said Forbes. "I think every manufacturer would say dealers are the primary method of distribution. But none of them say it in their sales and service agreement other than Ford."

Ford of Canada apparently has gone a long way toward rectifying an old sore spot with its dealers by agreeing to limit the company's right to sell, lease or loan Ford products.

Richard said the dealer council was initially unwilling to accept any direct fleet sales, but he said a compromise was reached with the company.

"We have to admit there are certain accounts we can't touch, although there are not more than five or six or 10," said Richard. "Ford is still going to sell some units directly, but every year they have to report the number of units and the number of accounts."

• Read said the annual reporting requirement allows the dealer council to know how much direct-sale activity is occurring.

"There is no limit on the number," he said. "It is a reporting mechanism. If the number were to jump suddenly, it would be up to the Ford Dealer Council to say it is becoming a serious problem."

Read said compensation of dealers who service fleet units sold directly by the company is also an important clause.

"As a practical attempt to resolve the fleet subsidy problem, this is a good effort," said Read.

The new standards for overdealering basically require the company to fill open points vacant for at least one year in the same way new dealerships are added. Before a franchise is awarded at a new location, Read said, the company informs existing dealers in the area, conducts surveys and provides market data.

"If Ford chooses to put in a dealership," Read said, "and the dealer is able to offer reasonable evidence (why it should not be established), the dealers could take it to Ford's internal appeals and arbitration procedure, and ultimately take it to court."

"Before, if a dealership closed its doors, Ford could reopen it without discussing the matter with anybody," said Richard. "But now, if the open point has been closed for a year or more, they have to discuss it with the dealers."

Some U. S. dealer agreements provide for notification of nearby dealers before a new dealership is opened, according to Bill Newman, an associate director for communications / industry relations at NADA. But there is apparently no standard for open points.

Newman said several states have adopted statutes which set requirements for establishing new sales outlets and filling vacated sites. However, he said, most of the laws are relatively new and haven't been in place long enough to develop court guidelines.

• Also included in the new Ford of Canada agreement is a clause linking sales volume with the number of demonstrators a dealer is required to maintain

Previously, the company specified the number of demonstrators dealers had to have and was free to change the requirement at any time.

"Now, they can't simply require everyone to have 10 demonstrators as a way to sell more cars," said Read.

The new agreement provides that warranty claims must be paid "as expeditiously as practical." Read said the dealers sought to impose a specific time period for payment of claims, but Ford would not agree.

"We took the 'as expeditious as practical' approach so a dealer could march into court and show what industry practice is," Read said. "This is a big point when the economy is not going well, or when Ford has a cash flow problem."

The company has also eased requirements affecting share structure and financing reporting obligations. Previously, a Ford dealer in Canada had to report any change in share structure to the company. The new agreement permits franchise-holders to make a change without notifying the company, so long as it does not affect majority ownership.

The new agreement provides that Ford must pay a terminated dealer 75 percent of monies owed within 60 days, and the balance as soon as practical.

"It is historic to the industry that termination payments can drag on for months and months," said Read. "After a dealer is out of business and has shipped parts back to the company, there was no obligation for the factory to pay off its debt to dealers. This brings (Ford dealers) into line with what I understand to be U. S law."

Sweepstakes winners

Mr. and Mrs. Albert Perry, Pleasant Hill, Mo., take delivery of a 1984 Buick Skyhawk which they won in Converse Corp.'s sweepstakes. Pictured with the Perrys are Jeff McHenry, sales manager, Howard McHenry Motors, Inc., Harrisonville, Mo., and Bob Cochran, Buick district manager.

Jacobs sells interest

CHICAGO. — Alan Jacobs has sold his interest in Jacobs Twin Buick here. Harold Jacobs will continue to operate the 30-year-old dealership with members of his family.

Ad help offered to dealers who guarantee discount sales

By Joseph Bohn
Marketing Editor

A California company is cooping dealer ads, and offering guaranteed discounts, as a way of merchandising cars.

The company has 250 dealers in California and Nevada subscribing to its "Dealers Insider Service" (the company name) and plans to expand into other states.

For a fee which varies from dealer to dealer, the company puts together brochures and ads, listing dealer members who agree to sell cars (most models) for no more than 10 percent over cost and also provide a similar discount on parts and service.

It's like an auto broker advertising a list of willing-to-discount dealers, though Rick Feldman, vice president of operations, says his company is in no way a broker.

People buy directly from dealers with his service, he points out, and there is no commission or remuneration to his firm other than that included in the co-op ad fee.

People pick the dealer they want, and get a guarantee of at least so much of a discount (on most cars).

The brochure listing the participating dealers is distributed quarterly by California credit unions to their members. Dealers Insider Service also places ads in AAA publications to publicize its dealers.

More recently, it signed with ON cable TV to have its dealer brochure distributed to 300,000 cable subscribers in Southern California.

Feldman said, "We do what it takes to get as many numbers as possible around our participating dealers, and we also keep an eight-to-10-mile radius between like makes of dealers," to avoid having two Chevy stores, for example, competing for the same customers in the same area.

• He claimed the cost of reaching some 3.5 million people in California, for example, is less than a penny a person to a participating dealer, but he declined to give an estimate of how much his service actually costs the average dealer.

Feldman also claimed that the prices to customers end up being as good or better than fleet prices.

That is debatable in view of the extra allowances that companies normally allow dealers on fleet sales.

The whole concept of offering cars at no more than 10 percent over dealer cost is undoubtedly more viable in California, where import stores often sell at full sticker, than it would be in many other areas, where dealers typically advertise those kinds of discounts or more on their own.

Told that many dealers in different parts of the country advertise and sell cars for less than 10 percent over cost, Feldman said, "Where? Where are they?"

Then, he added, "We've been deluged by people and dealers (in other areas) to put the program in."

For competitive reasons, he declined to say into which other states his company was going "in the near future, though probably it will be in the West."

Dealers Insider Service was reportedly designed to fill a gap of providing year-around discount guarantees to credit union members after the collapse of two auto broker firms in California.

they were all close, giving the April 1 inventory a remarkable balance.

On April 1, the industry had the following days supplies by market class: Subcompact, 57; compact, 66; intermediate, 54; standard, 50, and luxury, 51.

A month earlier, days-supply figures by market class were: Subcompact, 58; compact, 67; intermediate, 60; standard, 50, and luxury, 44.

The April 1 domestic inventory was divided this way among the market segments: Subcompact, 18.87 percent; compact, 26.91 percent; intermediate, 33.66 percent; standard, 12.16 percent, and luxury, 8.40 percent.

A month earlier, the inventory was divided as follows: Subcompact, 18.82 percent; compact, 26.69 percent; intermediate, 34.73 percent; standard, 12.06 percent, and luxury, 7.70 percent.

• The April 1 days-supply figures by market class were:

Subcompact—Fiero, 12; Accord, 20; Horizon, 47; Chevette, 49; Omni, 54; Escort, 55; EXP, 65; Lynx, 67; Turismo, 69; Charger, 75; Pontiac 1000; 80; Alliance, 83; Laser, 86; Daytona, 86; Encore, 88, and Rabbit, 100.

Compact—Firebird, 52; Cavalier, 54; Mustang, 60; LeBaron, 62; Reliant, 65; Tempo, 66; Camaro, 68; Topaz, 71; Pontiac 2000, 71; Dodge 600 two-door, 73; Aries, 74; Capri, 75; Skyhawk, 81; Firenza, 84; Eagle, 94, and Cimarron, 112.

Intermediate — Cutlass Ciera, 32; Marquis, 36; Pontiac 6000, 39; Century, 41; Celebrity, 47; Cutlass Supreme, 49; LTD, 53; Regal, 57; Malibu, 61; Cougar, 65; New Yorker E, 65; Citation, 68; Thunderbird, 69; Chrysler E Class, 69; Bonneville, 78; Skylark, 80; Monte Carlo, 82; Grand Prix, 82; Omega, 87; Dodge 600, 87, and Phoenix, 91.

Standard — Gran Fury, 37; Olds 88, 38; Grand Marquis, 44; LeSabre, 45; Diplomat, 49; Crown Victoria, 56; Chevrolet, 64, and Parisienne, 71.

Luxury—Lincoln, 21; Olds 98, 38; Seville, 42; Eldorado, 43; Corvette, 47; Cadillac, 51; Riviera, 56; Toronado, 64; Continental, 66; Electra, 68; Fifth Avenue, 69, and Mark VII, 85.

Chrysler sues to block deal

GM-Toyota venture wins FTC blessing

Continued from Page 1

Dec. 31, 1997, whichever comes first).

It will make some 250,000 vehicles a year, a car modeled on the Toyota Corolla line to be sold by Chevrolet dealers. Any further expansion beyond that would require prior FTC approval (although Toyota could make a car for export to Japan).

Because FTC staff recognized there exists the potential for anti-trust violation, the commission required a consent agreement. This limits exchange of competitively sensitive data (especially price-sensitive kinds) to the extent needed to accomplish NUMMI's legitimate needs.

The only change made in the consent order before final FTC approval was to include "product development and engineering activities" among the subjects which have limited treatment. The companies are also required to keep records so FTC can monitor compliance with the consent order.

The positions and arguments of the five commissioners have not changed since last December when they gave their tentative approval.

Chairman James C. Miller III said the joint venture will increase the total number of small cars available, thus allowing consumers wider choice at lower prices, despite the current restrictions on Japanese imports.

He believes NUMMI's car will cost less to make than if GM had to rely on some other source. Moreover, he said, GM will have a "valuable opportunity" for GM to learn the Japanese way and this may become a model for other makers to emulate.

Commissioner Michael Pertschuk, a former FTC chairman whose term will expire this September, continued his strong opposition. The FTC's final approval, he said, is a "gift from the American public to GM and Toyota's workers."

The most likely result, he added, is "upward pressure" on GM and Toyota prices, with the rest following along. And why, he asked, the U. S.' biggest company and Japan's biggest, each price setters in their respective countries? Why not Isuzu, where GM already has a 34 percent interest, and where there would be far fewer, if any, antitrust problems?

• Pertschuk noted the "key role" played by Japanese export quotas (which, he said, already allow Toyota dealers to charge a premium of $2,000 to $4,000 above list price).

The FTC staff believed that since the Japanese cost advantage is likely to stay for some time, so will the "voluntary" restraints or some legislated equivalent like domestic content and approval of the GM/Toyota deal may be helpful in "evading" the quotas. Pertschuk refused to accept this line "which amounts to elevating the evasion of national policy to an antitrust defense."

Moreover, Pertschuk added, the limits on exchange of data to that which is "needed" is not even really possible to do or to monitor. The public should take "little comfort" in these strictures since there will always be "informal and casual" communications, he said.

Pertschuk also fought the FTC decision allowing formation of NUMMI early — before closing of comments, before the period set by law, and before final approval — and he fought Chairman Miller in a series of letters between the FTC and Rep. Florio. But that is now made moot by the final approval.

The main points made by Pertschuk were that GM now does not have to make its own small car, and the long-term interest of workers and the public will suffer, and Toyota can avoid coming into the U. S. to build its own plant since it can make more money and get around the quota on its cars by selling parts and components to NUMMI and be assured of profit on each of those cars sold to GM.

Commissioner Patricia Bailey, the other dissenting member, feels the Joint Venture breaches the antitrust laws and that the claimed "efficiencies" are "more a product of friendly guesswork than verifiable calculation."

The consent order, she added, not only does not prevent data exchanges but it "embodies a formula for establishing the wholesale price for the joint-venture car which is very likely to reduce retail price competition between GM and Toyota."

Sportique holds charity food drive

Sportique Motors, Ltd., a Jaguar and Peugeot dealership in Huntington, Long Island, N. Y., has completed its fourth annual charity food drive. Tom Lederer, left, dealership vice president, and Eliot Brown, president, pose with this year's contribution to the Huntington Community Food Council.

All five indicators share advances

Service Index scores record gain

Continued from Page 1

ships for repairs and maintenance."

A dealer in the South said "business is just getting better. People are just spending more for everything, including new cars and service."

A dealer in the Rocky Mountain area attributed a lot of the increase to the severe winter that area experienced and the jump in new and used-car sales.

"A lot of people are getting their vehicles serviced and repaired following one of the worst winters we've ever had," he said. "We also sold a lot of new and used cars in the past year, and those folks are coming back for service and parts now that we have a break in the weather."

Dealers also noted that motorists are keeping their cars longer and are "spending money to keep them running."

"They are reaching the point where they have to spend money to keep their vehicles on the road," one dealer said. "We didn't run any service specials nor did we have any adverse weather conditions. People are just more cognizant of taking better care of their vehicles because of the high cost to replace them."

• Some dealers say many motorists are coming back to the dealership for routine service because service stations and independent shops, including chain outlets, have closed their doors.

In February, all five indicators used in the Service Index scored strong gains, led by shop part sales, those used on both customer-paid and warranty work, which were up 31.5 percent over the year-earlier figure.

Sales of all parts and accessories registered an increase of 28.7 percent, followed by gross profit on all labor, parts and accessories sales — the most important barometer from the dealer's viewpoint — up 25.6 percent above the figure recorded in February, 1983.

Total labor sales (customer-paid and warranty) topped last year's volume by 24.1 percent, while repair orders written were up 22.0 percent, the biggest monthly increase since August, 1976, when RO's jumped 21.3 percent over the year-earlier figure.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

For the two-month period of 1984, service and parts business was 122.0 percent of the volume attained for the same period the year before.

Sales of all parts and accessories showed an increase of 27.6 percent for the period, followed by shop parts sales, up 26.6 percent, and gross profit, up 22.0 percent.

Labor sales increased 18.5 percent, while repair orders written advanced 14.5 percent.

Rollback should be a felony, odometer hearing is told

WASHINGTON. — Rolling back odometers to reflect lower mileage on used cars should be made a felony carrying a three-year maximum jail term, the Department of Transportation has told a Senate Transportation subcommittee.

However, DOT does not support federal legislation requiring all states to list odometer mileage on their vehicle titles. Nor does the agency support development of an odometer standard requiring the use of tamper-resistant odometers.

NHTSA Administrator Diane Steed told the Senate Surface Transportation subcommittee only six states and the District of Columbia do not require odometer readings on their titles. "We expect the list to shrink further, as it becomes apparent to the remaining states that they are being used as laundromats to wash titles soiled by high odometer readings," Steed said.

• Legislation recently introduced by Senator James Exon, Nebraska Democrat, would require all states to carry odometer readings on their titles. Steed told Exon that although DOT would like to see accurate mileage figures on all titles, legislation to accomplish this should come from the states, not the Federal Government.

Steed said DOT would be willing to re-examine its position should state efforts in this area falter.

The chairman of NADA's Governmental Relations Committee, C. C. Gunn, told the subcommittee his organization supports Exon's bill, saying it would create a record through which odometer tampering could be traced.

• Gunn said odometer fraud is costing consumers an average of $750 per car in cases where the odometer has been rolled back, a total cost to all consumers of $2 billion annually.

Former NHTSA administrator, Joan Claybrook, testified that odometer fraud constitutes a safety problem since consumers will not be able to assess when preventive maintenance is necessary to keep their vehicle in good operating condition.

Claybrook criticized NHTSA under the Reagan Administration for abandoning the tamper-resistant odometer standard, which she claimed would have cost an average of $1 per car.

New Pontiac dealer

Brett W. Coker, seated, is welcomed as a new Pontiac dealer by Don H. Fielder, car distributor with Pontiac's Kansas City zone. Coker will operate Brett Coker Motor Co., Emporia, Kans.

Allison Turbine becomes a full division of GM

DETROIT. — General Motors has raised its Allison Gas Turbine Operations to full divisional status. It formerly was part of Detroit Diesel Allison Division.

The company said the move was made "to more clearly define GM's presence in the defense business."

The new unit will be called Allison Gas Turbine Division and will be headed by Dr. F. Blake Wallace as general manager. Wallace formerly was general director of the activity.

The division will be part of the Power Products and Defense Operations Group, which is headed by Dr. David S. Potter, GM vice president and group executive. The group also includes Electro-Motive Division, Diesel Division of GM of Canada and Delco Systems Operations.

Allison Gas Turbine Division is headquartered in Indianapolis and has 7,000 employes. It makes gas turbine engines and components for aircraft, vehicular and industrial/marine power systems, locomotive parts and precision bearings.

Taiwan loses duty-free status on auto wiring

WASHINGTON.—Taiwanese-made automotive wiring harnesses have been dropped from a U. S. list of duty-free imports by President Reagan.

The decision, which was urged on Mr. Reagan by the Special Trade Representative's Office and the U. S. International Trade Commission, means the Taiwanese will pay 5 percent ad valorem on wiring harnesses they send here.

National Industries, Inc., of Montgomery, Alabama argued in favor of dropping the Taiwanese product from the Generalized System of Preferences before the trade commission and the U. S. trade ambassador, William E. Brock.

Taiwan shipped $40 million worth of harnesses to the U. S. last year, according to National Industries.

17 assembly plants work extra hours

Heavy overtime hikes car output

By Joe Wilssens
Staff Writer

Domestic auto makers scheduled overtime at 17 assembly facilities last week and slated the week's production at 179,281 units, 2.64 percent greater than the previous week's 174,678. The output is 31.55 percent higher than the year-ago week's total of 136,287.

To date this year, 2,529,572 autos have been completed, up 42.87 percent from 1,770,506 built in the comparable period last year.

Breakdown for the week by company was: General Motors, 55.79 percent; Ford Motor Co., 22.72 percent; Chrysler Corp., 16.04 percent; American Motors, 2.68 percent; Honda, 1.46 percent, and Volkswagen of America, 1.31 percent.

Nine GM assembly plants scheduled Saturday (April 14) overtime. Two Saturday shifts were worked at Arlington (Tex.), Detroit, Fairfax (Kans.), Flint (B, D and G lines), Janesville (Wis.), Leeds (Mo.), Linden (N. J.), Oklahoma City and Van Nuys (Calif.).

Ford scheduled Saturday overtime at Atlanta, Kansas City and Wayne (Mich.).

Chrysler scheduled two 9-hour daily shifts and two 8-hour Saturday shifts at Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2. Jefferson (Detroit) worked two 8½-hour daily shifts and two 8-hour Saturday shifts last week.

Chrysler plans to follow the same daily overtime schedule this week.

U. S. auto assembly facilities will be closed Friday (April 20) in observance of Good Friday.

Domestic-content measure opposed by coalition of 100

WASHINGTON. — A coalition of 100 American companies and organizations has written letters to all U. S. senators attacking the UAW-backed domestic-content bill.

Included are U. S. manufacturers, farmers and other exporters, consumers, port interests, importers and civil groups coordinated by the National Foreign Trade Council and Consumers for World Trade.

The action came shortly after the Senate Commerce Committee announced that it will hold hearings on the bill in Washington (May 16 and May 24), in Portland, Ore.; in Des Moines, and in Michigan.

Senator Don Riegle, Michigan Democrat, a strong advocate of the bill to protect the domestic auto industry (itself split on the measure), has been pushing for hearings in hopes final action could be achieved during this Congress.

Committee Chairman Bob Packwood, Oregon Republican, is opposed to the bill and is believed to have set hearings in Oregon where port authorities and exporters will testify against it and in Iowa where farmers are strongly opposed.

The Michigan hearings are a sop to Riegle, who will probably not even chair them.

During the last Congress, after the House passed the domestic-content bill, the Packwood committee held hasty but thorough hearings but the measure never reached the Senate floor and it died with the Congress.

In this Congress, the Democratic House again passed the bill—Nov. 3, by a vote of 219 to 199—but unless the Republican Senate acts, the measure will again die.

Opponents of the measure now say a vote for domestic-content legislation "simply cannot be justified," especially in view of "record levels of U. S. auto industry profits in 1983 (over $6 billion)" plus loss of jobs in other sectors, the risks of retaliation against exporters and the expected sharp rise in car prices.

The coalition cited a recent study by Wharton Econometrics predicting that passage of domestic content would cause a 10 percent jump in new-car prices for a total cost to consumers of $18 billion a year.

It cited the estimate by the nonpartisan Congressional Budget Office that with a domestic-content law, 104,000 jobs would be lost in the export sector by 1990 while only 38,000 auto jobs would be saved.

Truck production is 64,592, up 4 pct. for week

Domestic truck production rose to 64,592 last week with overtime hours scheduled at five assembly plants. The total was up 4.33 percent from the previous week's build of 61,913 and was 33.06 percent higher than the year-ago week's 48,543.

Year-to-date, 932,200 trucks have been completed, 54.21 percent better than 604,682 finished during the same 1983 period.

At General Motors, Detroit scheduled one Saturday (April 14) overtime shift while the company's Janesville (Wis), Pontiac No. 5 and St. Louis assembly plants worked two Saturday overtime shifts.

Ford Motor Co. scheduled Saturday overtime at its Kansas City facility.

U. S. assembly facilities will be down Friday (April 20) in observance of Good Friday.

Canada builds 24,056 cars, off 4 pct. for week

Canadian auto makers slated production of 24,056 cars last week, down 4.12 percent from the prior week's 25,089. The total was 25.81 percent greater than the 19,121 units assembled in the year-ago week.

So far this year, manufacturers have built 334,630 autos, 21.24 percent better than the 1983 total of 276,016 at this point.

Truck assembly last week was targeted at 17,878, up 2.27 percent from the previous week's 17,481 and an impressive 45.39 percent improvement over the year-ago week's production of 12,297.

To date this year, truck production has climbed to 250,142 units, a 73.30 percent increase from the 144,344 trucks which were completed at this time last year.

Chrysler Corp. estimated production of 2,370 Dodge Caravans, 2,190 Plymouth Voyagers and 912 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 65,593.

Canadian assembly facilities will be closed Friday (April 20) in observance of Good Friday.

Michigan broadcasters honor Ford's Caldwell

LANSING. — Ford Motor Co. Chairman Philip Caldwell was honored as Outstanding Citizen of the Year by the Michigan Assn. of Broadcasters (MAB), based here.

Each year, MAB members honor an individual who has made a significant contribution to Michigan. The award was presented at MAB's annual Congressional Meeting.

Import stock cut to 27 days but Japanese count only 16

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars was a little higher on April 1 than it was a month earlier, but sales were, too, and the inventory dipped to a 27-day supply from 28 days March 1.

New imported cars in dealer inventories and dealer stockpiles totaled 212,315 April 1, compared with 207,683 a month earlier. A year ago, there were 287,408 new imported cars in stock April 1, a 40-day supply.

The increase was due to a buildup by European-make importers, as stocks of Japanese-built cars reached their nadir at the close of the third year of "voluntary" restrictions.

The entire pool of Japanese-built new cars was good for only 16 days April 1, down from an already meager 20-day supply a month earlier.

In fact, Japanese nameplates, which account for more than three-quarters of imported-car sales in the U.S., were on less than half of the cars in the import inventory.

The supply of new imported pickup trucks — all of Japanese origin — also declined during March to 61,009 units, a shortage-marked 25-day supply, from 62,893 a month earlier, which was a 34-day stock. A

Seville gets major changes

More trunk space via a redesigned rear end is one of the most significant changes in the Cadillac Seville for 1986. Scheduled to be built at GM's new Poletown (Detroit-Hamtramck) plant, along with the Riviera, Toronado and Eldorado, the Seville will have a cross-mounted 4.1-liter V-8 as its standard powerplant.

Okla. turns down fleet-subsidy bill; GM efforts cited

OKLAHOMA CITY. — Amid charges of "scare tactics" and "threats," a bill aimed at curbing fleet subsidies was defeated here when an unprecedented 45 state legislators changed their votes after a massive, high-pressure lobbying effort by General Motors.

According to one legislator, no one could recall an instance in which 45 members of the House changed their votes — an especially odd development after the bill was initially passed by a unanimous 92-0 vote and sent to a Senate-House conference.

After it was released from conference, it failed to get the necessary 51 votes to pass and failed 49-45. New-car dealers accused GM of pulling out all stops to defeat the bill, including introduction of the unrelated issue of the future of a new GM plant in the state.

The bill would have required that franchised dealers be given the lowest price offered by the auto manufacturers to any buyer in the nation. This would mean that dealers in Oklahoma would get the same subsidies offered to fleet buyers anywhere in the U.S.

The issue of fleet subsidies has been a sore point with franchised dealers throughout the country for years. The emotionally charged issue raised by the Oklahoma bill drew the UAW into the fray on GM's side, in addition to their natural allies, the major fleets. That united front turned the tide against the measure.

An Oklahoma Automobile Dealers Assn. spokesman termed the GM effort massive and added "we struck a nerve."

• The bill was not exclusively an anti-fleet subsidy measure. It was more comprehensive and this was only one section of the bill. It also would have required auto makers doing business in the state to provide information on dealer territories, required data on open and closed points

Fiat ousts Ford from first; GM a strong third

European market turns topsy-turvy

By Richard Feast
European Editor

LONDON. — European new-car market shares have been turned upside-down this year. Last year's leaders have gone, replaced by that year's tail-enders.

Leading retailer at the end of the first quarter is Fiat Auto, which one year earlier was fifth among the Continent's Big Six makers. General Motors, sixth in the first quarter of 1983, is now a strong third.

In last year's opening three months, Ford made history by becoming European market leader for the first time. In the process it displaced Renault, which had held the position for most of the 1980s.

But after three months of this year, Ford is back in second place — a mere fraction ahead of GM — and Renault is a very remote sixth.

Unofficial statistics for the period are now circulating the European industry. They show that total sales for the 16 countries are up one percent at 2,858,800 units. Final results will not be known for some weeks, but they are expected to differ little from these preliminary reports.

• In another unexpected development, BMW's European sales exceed those of arch-rival Daimler-Benz for the first time. BMW's 95,100 units for the quarter is only 600 ahead of the Stuttgart company's, but behind it is an aggressive increase over the previous year of 12.3 percent.

By the end of March, the leading six makers stood in this order: Fiat Auto (including Lancia and Autobianchi), Ford, GM (Opel-Vauxhall), VW-Audi Group, Peugeot SA (Citroen, Peugeot and Talbot) and Renault.

One year earlier the order was Ford, Renault, VW, PSA, Fiat and GM. By the year-end, Renault had regained the lead, but by slimmest of margins. Part of its effort in doing so involved pulling some 1984 business into 1983, a fact reflected by its poor results so far this year.

The leading six are covered by 2.2 percent (62,500 units) this year, compared with 2.6 percent (73,400) during the same period of 1983.

• There have been three European leaders so far this year — Fiat in January, GM in February and now Volkswagen Group in March. Overall, Fiat is just ahead, thanks to a larger share of an expanding domestic mar-

GM-Toyota Chevrolet to show profit—Smith

By John Hartley
Staff Correspondent

NAGOYA, Japan. — "We will be able to sell a new Chevrolet at competitive prices, and the joint venture will be able to make a profit," said General Motors chairman Roger B. Smith.

He spoke at a press conference here marking FTC approval of the joint GM/Toyota project in Fremont, Calif.

Smith also said that the new car, a four-door sedan initially, will be a premium model and that it will start coming off the lines at Fremont in December this year.

He said the deal was good for the U.S. because 50 percent of the value of the car would be U.S. content. When pressed, he said this was manufactured value.

Smith said the project would mean 12,000 jobs when those components are taken into account.

Hiring of key personnel is due to start soon, he said. The bulk of the workforce will be recruited in the fall, he said, pointing out that the stamping plant is under construction and that all the old equipment has been ripped out of the main plant to make it ready for the new equipment.

• One of the reasons for Toyota and GM setting up the joint venture was to see if the Toyota manufacturing system, including just-in-time, could be made to work in the U.S., Smith said.

"We want to know if it works in the U.S., with the UAW,"

breaking news

McCurry to succeed Lean at Toyota

LOS ANGELES.—Robert B. McCurry, 60, reportedly will be named senior vice president and chief operating officer at Toyota Motor Sales U.S.A., succeeding Norman D. Lean, effective May 1. Lean retired late last year and the position has been unfilled since then. McCurry currently is general manager of Toyota's Los Angeles region. Prior to that he was general manager of a Toyota distributorship and before that he served 28 years with Chrysler Corp., retiring in 1978 as group vice president in charge of North American sales, parts and service.

Audi name change to be proposed

INGOLSTADT, West Germany.—Audi NSU Auto Union AG appears ready to change its name to simply Audi AG. The supervisory board will propose the name change at June's annual meeting.

GM reorganization moves steadily along

DETROIT.—About 90 percent of the structural changes being made in General Motors' reorganization will be completed by year-end, Vice President Lloyd Reuss, group executive, Chevrolet-Pontiac-GM of Canada Group, said. By that time, each of the two new groups will have a headquarters outside Detroit's Renaissance Center, focal point

$2-billion investment possible

Huge auto expansion shaping up in Canada

By Marjorie Sorge
Labor Editor

Canada may be the recipient of about $2 billion in automotive investment if proposals made by foreign and domestic companies come to fruition.

Most of the $2 billion investment would come from proposed projects at General Motors of Canada, Honda Motor Co., American Motors and a joint Chrysler/Mitsubishi venture.

In a speech to the Parts Manufacturers Assn., Edward Lumley, federal minister of industry, said other countries are being considered as possible locations, but he indicated that the Canadian Government would do everything possible to have the investments made in Canada.

There is currently a proposal from the automotive industry and the Canadian UAW requesting that the government make it mandatory that the auto makers achieve 60 percent Canadian content here by 1987 and then raise that commitment. That proposed legislation is aimed at the Japanese.

It is possible that two Japanese companies will invest in Canada and make the announcement within the next few months.

According to sources and published reports in Japan, Honda is looking seriously at Ontario as a possible site for an auto plant. Sources said it would likely be similar to a CKD plant "not a billion-dollar investment with a lot of workers."

The Toronto Star has reported that the investment would be about $100 million and would employ a few hundred workers.

Honda has confirmed it is doing feasibility studies in Canada.

Honda sold 54,212 vehicles in Canada last year and 55,961 in 1982.

The new plant would produce about 50,000 vehicles a year beginning in 1986.

• Mitsubishi could be another possible Japanese investor in Canada in a joint venture with Chrysler at its Windsor (Ont.) engine plant. Sources said the two companies are studying the possibility of a joint venture to build an engine in that plant.

Lee A. Iacocca, Chrysler chairman, has said he would like to reopen the engine facility if possible. He has also indicated he would like a new V-6 and Chrysler has been shopping for one to use in both its cars and its new minivans.

The Windsor engine plant closed in August, 1980. According to a company spokesman, it would take between one and two years to get the facility back on stream.

Two domestic companies could also get into the act — AMC and GM of Canada.

AMC is likely to expand its Brampton (Ont.) operation to build a new Renault AMC car, probably in the mid-size range. Sources said the expansion will be "fairly significant."

Brampton currently is the sole builder of AMC's four-wheel-drive Eagles.

According to an AMC spokesman, the company will be building larger cars some time in the future but no decision has been made on a Brampton expansion.

AMC's other auto assembly plant in Kenosha is working almost at capacity at 960 a day. Kenosha will be building a new convertible in the Alliance family for the 1985 model year. It currently builds the two-door and four-door Alliance and the three-door and five-door Encore.

A spokesman said AMC is also looking at possibly building the new cars in its Jeep plant in Toledo.

It has also been rumored that GM will build a second stamping plant in Oshawa, Ont., and sources say the company is close to a decision.

However, a GM of Canada spokesman said an additional stamping plant is only a rumor and the plant currently operating is not over-capacitized.

Snubbed Iacocca throws own party

DETROIT. — "I was at the Tiger game week before last, and there was an airplane circling overhead, inviting everybody to come down to the RenCen to celebrate the Mustang's 20th birthday. I'm the only guy in the world who wasn't invited."

Lee Iacocca had fathered the Mustang before being fired by Ford Motor Co. He said he made up for the snub by "calling my own party" — otherwise known as a press conference — to announce record quarterly profits and sales for Chrysler Corp.

Sales smash old mark, too

$706 million a record for Chrysler earnings

By Kathleen Hamilton
Financial Editor

Last year, Chrysler Corp. made $701 million — a full-year record.

Last *quarter*, Chrysler made nearly $706 million. Needless to say, it was a quarterly record.

First-quarter net income of $705.8 million ($5.64 a share) more than quadrupled the old first-quarter record of $172.1 million ($1.97 a share), set last year.

Meanwhile, sales were up 59 percent to a record $4.92 billion from $3.10 billion in the 1983 quarter. The old sales record was set in the second quarter of 1976, when Chrysler sales were $4.11 billion. But unit sales at that time totaled 862,194, and Chrysler still owned Chrysler Defense and extensive European auto operations.

This time, Chrysler had to sell only 516,672 cars and trucks to beat the old record. This year's unit sales figure is 46 above last year's first quarter.

The old profits record — from the second quarter of 1983 — didn't even come close: $310.3 million.

Chrysler Financial Corp. contributed $29.6 million to its parent company's first-quarter profits, said CFC President E. O. Grote. Its after-tax profit ($18.7 million) was inflated to $29.6 million on the parent's books because of Chrysler's tax credits.

Chrysler won't be paying anything significant in taxes for last quarter. Its tax credits actually added $317.4 million to its net income.

"If we continue at these kinds of rates, by early in the first quarter of 1985 we'll become some kind of taxpayer, because our credits of the tax-loss carryforwards will have been wiped out if we have a couple billion dollars profit this year — and we're off to a good start," Chairman Lee Iacocca said in announcing Chrysler results.

Much of the profits increase is due to the sales success of Chrysler's performance cars and highly equipped minivans that have "double, sometimes triple the margins of Omni/Hornzon," Iacocca said.

Indeed, two weeks before the profits were announced, the variable profit per minivan was estimated at $3,200 — potentially rising to as high as $4,000 — by Ann C. Knight, auto analyst for Paine Webber Mitchell Hutchins, Inc.

Chrysler reduced its breakeven point last quarter to something below its much-publicized 1.1 million vehicles, Iacocca said. The breakeven point probably will rise to something around 1.2 million as Chrysler expands capacity, said Richard Dauch, executive vice president - Stamping, Assembly and Diversified Operations.

The abbreviated financial report showed another bright spot

Ship of significance

One of the first ships to traverse the St. Lawrence Seaway to Detroit in the 1984 shipping season was the 650-foot MV Vitina out of Syros, Greece, with a load of steel from Antwerp, Belgium. Her stormy crossing and early arrival point up the growing penetration of foreign steel in the U. S. Imports of steel last year amounted to 20.5 percent of the market. In the first two months of this year, they gobbled up an average of 26.2 percent, says the American Iron & Steel Institute.

Domestic tally tops last year by 32 pct.

Early-April sales highest since '79

By Jenny L. King
Staff Writer

Early-April domestic sales continue to imitate 1979 numbers. The April 1-10 total was best since '79, but not as strong as '78 and several preceding years.

Domestic sales were up 32.59 percent compared with the first April period a year earlier and up 57.71 percent stacked against the dreary total of 133,402 posted in 1982.

Dealers delivered 210,395 new domestic passenger cars the first part of this month. Last year the total was 158,675, and back in 1979 it was 218,982. Record for the period was 241,974, established in the boom year of 1973.

Ford Motor Co. reported the largest year-to-year gain among the Big Three for the period, its sales up 80.07 percent, to 48,462 from 26,913. Chrysler Corp. sales numbered 24,612, up 24.02 percent from 19,845, and General Motors was up 21.92 percent, to 127,994 from 104,978.

Volkswagen moved into four-digit sales from three and marked a 120.13-percent increase. VW's total was 1,957 this year compared with 889 in 1983. Honda was up 315.63 percent, to 3,325 from an estimated 800, and American Motors slipped 22.95 percent, to an estimated 4,045 from 5,250.

Ford's share of the market leaped to 22.52 percent from 16.96 percent last year. GM earned 59.46 percent, down dramatically from 66.16 percent a year ago.

Chrysler was up to 13.69 percent from 12.51 percent. AMC dropped to 1.88 percent from 3.31 percent, while Honda claimed 1.54 percent — up from 0.50 percent — and VW grew to 0.91 percent from 0.56 percent.

Among the domestic makes, the news was mostly very good. Plymouth sales were up 22.15 percent, Dodge was up 36.34 percent and Chrysler was up 14.87 percent. Ford was up 92.25 percent, Mercury was up 54.36 percent and Lincoln was up 65.32 percent.

Buick was up 5.45 percent in early April to a record 28,709 sales, Cadillac was up 33.59 percent, Chevrolet was up 47.32 percent and Pontiac was up 51.99 percent. Oldsmobile, coming off a record month in March, was caught in a payback slump, its sales down 1.44 percent from last year.

AMC estimated sales dropped 61.43 percent, Renault was off 13.33 percent, VW was up 120.13 percent and Honda was up 315.63 percent.

Year-to-date sales for the period Jan. 1 through April 10 were up 36.48 percent, to 2,205,004 from 1,615,597.

NHTSA closes J-car inquiry

WASHINGTON. — A relatively quick engineering analysis of possible fires, both engine and fuel line, in General Motors 1982 J-cars has shown no evidence of serious safety problems, according to NHTSA.

It has closed its investigation.

GM throughout the investigation of the some 225,000 cars said any fuel leaks that were going to develop had already occurred before it made a change to improve attachment of a fuel hose to the carburetor. A total of 20 fires were reported as stemming from twice that number of reports on fuel leakage in early models.

Arizonan is Truck Dealer of Year

W. D. (Bill) Breck, left, owner of Bill Breck Dodge-Mack, Inc., Tucson, Ariz., accepts the award as 1984 Truck Dealer of the Year from Terry Sweeney, automotive manager of Business Week magazine. It was presented at the 21st annual convention of NADA's American Truck Dealers Division in Phoenix. Business Week sponsors the award.

Truck registrations soar in January

Truck registrations, led by the light and heavy groups, soared in January, compared to the first month of 1983.

During January, according to R. L. Polk & Co. statistics, there

GVW Table on Page 22.

were 282,398 new-truck registrations, a gain of 49.6 percent over the year earlier 188,796.

New York and Oklahoma figures for January were compiled from manufacturers' sales records. No registrations were available for Oklahoma in 1983.

Ford was No. 1 in registrations, leading runnerup Chevrolet by 3,528 units.

Light trucks tallied 267,449 units and accounted for 94.7 percent of the industry total. The count was 54.4 percent higher than the previous January's 176,707 units.

Heavy-truck registrations totaled 11,845 units, a 34.4 percent boost over the 8,816 tallied in January, 1983.

However, medium-truck registrations lagged with 3,104 units, down 5.2 percent from 3,273 units in the first month of 1983.

All classifications, with the exception of Group 6, showed increases in January.

There were 149,444 Group 1 tallies, an increase of 47.8 per-

truck industry news

Record 983,566 units top '78 by 3.4 pct.

3-month sales hit peak

First-quarter sales of new trucks of all types in the U.S. soared to an alltime high, and the total for March was the second-highest for the month. There were hefty gains for the quarter and March in all three market segments.

Franchised dealers and factory outlets retailed 983,566 new vehicles in the first three months of 1984, an increase of 3.4 percent over the previous high of 951,496 units set in 1978, and 47.2 percent higher than last year's 668,133.

In March, 377,685 new trucks were retailed, an increase of 34.6 percent over the year-earlier 280,687 units. The alltime high for March and any month was set in 1978, a total of 403,078 vehicles.

Light-truck sales through March were up 48.3 percent to 927,420 units, compared with 625,362 in the comparable period a year ago. Mediums totaled 12,759, a gain of 22 percent over last year's 10,453, and heavies were up 34.3 percent, from 32,318 units in 1983 to 43,387.

Dealers retailed 355,893 light trucks in March, a gain of 35.2 percent over the previous year's 263,272. Sales of mediums were up 22.8 percent, 4,737 versus 3,856. Heavies totaled 17,055, an increase of 25.8 percent over the year-earlier 13,559 units.

New-truck inventories at the end of the quarter were up significantly over a year ago, with increases in all three market segments. The industry total of 686,390 units was 26.2 percent higher than last year's 543,695.

The light-truck count going into the second quarter was 636,154 units, a gain of 26 percent over the year-earlier 505,057. Mediums were up 15.3 per-

Continued on Page 31, Col. 1

HD registrations up but leaders' penetration dips

Heavy-duty truck registrations in January jumped 34.4 percent to 11,845, compared with the year-earlier 8,816, but the market-share leaders, International and Ford, both lost ground.

According to R. L. Polk & Co. statistics, Group 8 registrations were up 56.5 percent to 7,811 units, compared with the previous year's 4,990.

Group 7 registrations increased to 4,034, compared with 3,826 a year ago, a boost of 5.4 percent.

International regained the lead from Ford with 2,593 units, compared with Ford's 2,354.

Ford and International had the largest market-share loss. Ford was the biggest loser, its 2,354 January tallies accounting for 19.87 percent of the total. A year ago, its 2,356 units accounted for 26.72 percent.

International's 2,593 tallies accounted for 21.89 percent of the market, compared with 24.84 percent on 2,190 units a year earlier.

Kenworth was the biggest gainer in penetration. Its 1,025 tallies took 8.65 percent of the total, an increase of 3.61 percentage points over the previous January's 5.04 percent on 444 registrations.

White, Freightliner, Peterbilt, GMC, Autocar, Mercedes-Benz and Western Star also increased their market share in January. Mack, Chevrolet, Volvo and the miscellaneous group suffered small losses.

Attendance at TRX-84 is second-highest ever

By Jack Walsh
Truck Editor

PHOENIX. — Attendance at TRX-84—the 21st annual convention/exposition of NADA's American Truck Dealers Division—was second only to the turnout at the 1979 event, which also was held in Phoenix.

The total this year topped 1,300, according to David Paxon, ATD director, and more than 400 were dealers and dealership managers. The 1979 event drew about 1,500.

Art Gunderson, convention chairman, said he received more enthusiastic responses to TRX 84 than for any previous convention.

"Dealers showed an unprecedented interest in workshop and make meetings," he added. "They came for no other reason than to learn."

Most exhibitors at the exposition, the biggest ever for ATD, were pleased with the heavy traffic and dealers' interest in their products or services. A few expressed some disappointment, and one indicated his firm wouldn't be back in 1985.

One of the convention's highlights was the honoring of the nation's top big-truck dealers by Business Week magazine, which sponsors the Truck Dealer of the Year Award.

• W. D. (Bill) Breck, owner of Bill Breck Dodge-Mack, Inc., Tucson, was named Truck Dealer of the Year. He was chosen from among 17 national finalists by judges from the Columbia University Graduate School of Business.

Regional winners were Dwight Hartman (Kenworth-GMC), Harrisonburg, Va.; Lester Turner (Kenworth-Mercedes-Benz), Nashville; James Roemer (Kenworth), Indianapolis, and Kenneth Nichols (Ford-Volvo-White), El Paso, Tex.

Other national finalists include:

Kevin McDevitt (GMC-IVECO), Manchester, N. H.; William Scully Jr. (Freight-

Associates named financing source for IH dealers

CHICAGO. — International Harvester and Associates Commercial Corp. have announced an agreement which establishes Associates as an additional financing source for truck sales by the Truck Group to its dealers and for financing retail sales by those dealers.

Neil A. Springer, Truck Group president, said that in view of strong increases of truck sales activity, "we have arranged this financial program with Associates to assure IH dealers and their retail customers that adequate, competitively priced financing will be available to meet the growing demand for trucks."

B. E. Starr, Associates Commercial's executive vice president, said his firm will provide to each participating dealer a combined financing package consisting of inventory financing of new and used trucks as well as retail financing and leasing.

Associates Commercial is the Chicago-based commercial finance subsidiary of Associates Corp. of North America.

Ronan and Reins head New Rockwell units

Rockwell International Corp. has named **Arthur P. Ronan** president of the newly created General Components Operations. He will be responsible for off-highway products, light vehicle components, all government automotive products, ventures and new business development for the firm's automotive and related commercial business.

Arthur P. Ronan

Ralph E. Reins

Ralph E. Reins has been appointed president of the newly created On-Highway Products Operations. He also has been elected a corporate vice president and a member of the firm's Management Committee.

Ronan had been president of the firm's Heavy Vehicle Components Operations and Reins previously was general manager of the On-Highway Axle Division.

Other new assignments at Rockwell:

Leonard C. Buckman has been appointed managing director, in-

Edged Toyota Corolla for 1983

Nissan says its Sentra leads in world output

TOKYO.—Nissan said it produced enough Sunnys and Sentras last year to win the title of the "most produced car" in 1983.

For a few years previously, the Toyota Corolla had held that title, usually just ahead of the Volkswagen Golf.

But last year, Nissan built 556,340 Sunnys, just 634 more than the number of Corollas built. Of course, Nissan was helped by the fact that there was a changeover between the old and new Corollas last year, while VW had similar problems with the Golf.

According to Nissan's figures, General Motors' "Ciera" was third with 527,391 units. This is probably the unlikely combination of Oldsmobile Cutlass Supreme and Cutlass Ciera, which are two entirely different cars. Supreme is rear-drive; Ciera is front-drive.

Nissan put the Renault 9 in the fourth spot with 488,048. The Golf slipped down to fifth on Nissan's list with 483,181 units, but it was well ahead of the Opel Kadett at 426,262.

Seventh on the list was the Mazda GLC, at 418,176 units, despite the fact that exports fell by some 1,500 units last year.

Thus, Japan is climbing the front-wheel-drive production ladder very fast. Last year was significant in that respect with a full year's output of Mazda 626s and eight months' output of front-drive Corollas.

The result was that last year, 1.75 million front-drive cars were sold in Japan, including the 550-cc midgets, to take about 58 percent of the market while another 2.25 million were exported. Overall, about 57 percent of all passenger cars produced in Japan now have front-wheel drive.

Nissan is now the biggest producer of front-drives in Japan with 1.2 million units last year, and with the addition of the Bluebird, volume should be up to 1.5 million this year.

Honda is second at about the million mark, ahead of Toyota's 800,000—but this year Toyota will probably catch Honda, as output of the new Corolla increases, and as it gradually introduces more front-wheel-drive versions of its medium-size sedans.

Next comes Mazda which, with 700,000 units, is well ahead of Mitsubishi in the front-drive stakes. However, with no plans to switch its larger autos to front-wheel drive, Mazda is not likely to increase its ratio significantly in the next year or two.

On the other hand, with its new Sigma, Colt and Minica, Mitsubishi is set on increasing volume substantially.

Dealers donate Skyhawk

SPRINGFIELD, Mass. — The Massachusetts Buick Dealers Assn. donated a new Skyhawk (valued at $8,459) to the 11th Channel 57 Auction at WGBY-TV, the Springfield Public TV station.

South Florida dealers donate

The South Florida Automobile Dealers Assn. provided the necessary $5,000 private sector initiative seed money requested by President Reagan to secure federal support and funds to launch the National Center for Missing and Exploited Children in Washington. Steven C. Moore, left, past president of the dealer group, presents the check to John Walsh and JoAnn Currier, initiators of the center.

Jan. registrations led by light, heavy groups

Continued from Page 16

cent over the year earlier 101,124 units.

Group 2 tallies grew 53.1 percent to 115,574 units, up from 75,496 units of a year earlier.

The largest gain of any category occurred in Group 3, where 2,431 units were registered, compared with only 87 in the first month of 1983.

Groups 4 and 5 also recorded impressive increases. Sixty-one Group 5 trucks were registered in January, compared with only seven a year earlier. In Group 5, 175 trucks were registered, compared with 62 a year earlier, for a 182.3 percent increase.

• Group 6 registrations dropped 10.5 percent, from 3,204 in January, 1983, to 2,868 this year.

Group 7 registrations climbed 5.4 percent, from 3,826 in January, 1983, to 4,034 this year, and Group 8 registrations jumped 56.5 percent, from 4,990 last January to 7,811 in the first month this year.

Ford's 84,758 registrations in January accounted for 30.01 percent of the industry total, a decrease of 2.16 percentage points over the year earlier 32.17 percent on 60,735 tallies.

Second-place Chevrolet took 28.76 percent of the total in January with 81,230 tallies. Its share was down 0.89 points from the 29.65 percent on 55,975 units in the same month last year.

JIM BOSTIC TELLS YOU WHY...

"THERE HAS NEVER BEEN A BETTER TIME TO ADD EUROPEAN CLASS TO YOUR BOTTOM LINE."

"IVECO European Class Diesel Trucks offer you a first class opportunity with Europe's second largest truck builder."

"We're the fastest growing major truck builder in the world...already sixth largest worldwide since IVECO was formed as a consortium of five major truck companies in 1977. With 14 factories in Europe, almost 50,000 employees, 200 truck and bus models and distribution in 65 countries...you can see that IVECO ranks with the biggest names in the truck business."

"IVECO Z-Range trucks are best sellers in Europe. And, they've already received rave reviews for better fuel economy, less maintenance and lower operating costs from satisfied IVECO owners in the U.S."

"Over 200 dealers in the United States have already recognized the opportunity to grow with IVECO in the North American market. Most of them report better margins selling IVECO trucks than on other lines they carry. And many dealers tell us their IVECO profit center is largely responsible for helping them make it through this most recent economic downturn."

"This is your opportunity to add a new profit center in your dealership... without major capital investment."

"You can establish an IVECO profit center in your dealership without spending a penny on bricks and mortar. No new or additional facilities are required. IVECO trucks can easily be added to your new truck sales department or as a complement to your passenger car sales."

"You'll also be able to use the same business approaches and skills that have already made your dealership successful. And, chances are, you will be able to sell IVECO European Class Diesel Trucks to many of your established customers."

Jim Bostic
IVECO President,
North America

"It's an opportunity to diversify your business investment portfolio."

"Given the ups and downs of the passenger vehicle markets in recent years, most dealers today avoid 'putting all their eggs in one basket.' That's why so many have added other product lines to diversify and to hedge against the demand cycles of the business."

"Traditionally, the demand for light commercial trucks has been very much different than for other vehicle types. With IVECO trucks, you can add a line that is compatible with your other products...and one that helps you further hedge your investment against market fluctuations."

"It's a unique opportunity for smart dealers to establish a profitable growth business."

"The future's very bright for light and mid-range commerical trucks. We need more good dealers right now who want to capture a share of this growth potential.

We're looking for smart businessmen ...like yourself...and like our current dealers...who recognize a ground floor opportunity when they see one...and who know how to make the most of it."

"IVECO's remarkable Z-Range trucks are unique in the industry."

"Our European Class Diesel Trucks offer buyers a combination of European design and quality plus sophisticated technology and superior performance. Tangible, measurable owner benefits like lower fuel and maintenance costs, longer service life and greater reliability with less downtime...all add up to a lower cost of ownership story your dealership can tell...and sell profitably."

"Add up the benefits of an IVECO franchise. Then add European Class to your bottom line."

"This is a unique opportunity for your dealership:

- A new profit center in your dealership without capital investment.
- Opportunity to diversify your business investment.
- Ground floor opportunity in growth market.
- Chance to establish a relationship with the fastest-growing truck line in America.
- Opportunity to sell products that offer customers exclusive benefits.

Make way for Austin Rover Group's modern Montego

New British model to rival Ford Sierra and Vauxhall Cavalier in upper-medium market

By Richard Feast
European Editor

Another step in what BL's Austin Rover Group (ARG) calls its "product-led recovery" will take place April 25 when the upper-medium Montego sedan, a rival of Ford Sierra and General Motors' Vauxhall Cavalier (Ascona), hits the market.

ARG will now have a modern competitor in a segment where it has been weak for years. Montego's arrival spells the end of the unlovely Ambassador and aging Ital, a model originally launched as the Marina.

According to ARG, the segment took 27 percent of last year's UK total of nearly 1.8 million car sales. Thus, practically all Montego sales will be conquest, though there could be some substitution of Maestro, the hatchback from which the new model is derived.

Equally important to ARG is who the segment's customers are. In the peculiar UK market, up to seven of every 10 new cars are sold to business users. Most are sold to fleet buyers for their sales representatives.

Those powerful fleet buyers used to favor Ford Cortina, which achieved more success in the UK than anywhere else in Europe. Now they buy Sierra, but are increasingly switching to Cavalier. The arrival of Montego has ARG shouting, "Me too!"

This year's main thrust with Montego will be concentrated in Britain. It will go into European export markets this fall, followed by shipments to the Middle East and Australia. There is no prospect of exporting it to the U. S.; ARG's return to the U. S. hinges on the forthcoming luxury-car project with Honda.

ARG has a strict policy of never making sales forecasts, stemming back a few years to when extravagant predictions were made and never subsequently realized. Montego's expected performance can only be gauged from production plans.

Chairman Harold Musgrove says the Cowley factory will build 5,540 a week of the LC10 range, and 2,750 will be Montegos. That would yield an annual volume of about 130,000, generous in view of Maestro's actual registrations in the UK last year of 65,300. (The model was not exported until the fall.)

Total Austin Rover production in 1983 just topped 433,000, and should approach nearly 500,000 this year, Musgrove says. It would be higher except for several product introductions planned this year, including replacement of Triumph Acclaim by Rover 1300 (Honda-Ballade) and a revamp of Metro which will include a five-door model.

Project XX will appear toward the end of next year, and it will not be until 1986 that ARG starts nudging up to 600,000 annual volumes. Over the longer term the aim is to utilize fully the company's installed capacity of 750,000.

ARG's concentration of sales in Britain is hazardous. It stands a chance of being trampled by the heavyweight tactics of market-leader Ford and GM Vauxhall, pretender to the title. But ARG has maintained 17 to 18 percent of domestic sales the past few years, a creditable performance d e entirely to new products such as Metro, Maestro and Acclaim.

The potential for major improvement by ARG in the UK is limited by the competition. The longer term salvation will have to be exports. It does reasonably well in France (30,000) and Italy (27,000), and this year will add West Germany to its priorities; it has already signed an ambitious scheme with a market chain there to sell cars next to bacon and beans.

Musgrove maintains the company is technically equal to its main European competitors, but acknowledges its image is poor. One reason for its heavy commitment to international motor sports is to show Austin Rover products beating the best from Europe and Japan.

"We will be building up exports slowly, doing things right. If we get rapid growth, fine, but it's not a priority. We are looking to do things properly," says managing director (commercial) Mark Snowdon.

Montego is part of a 210 million pounds ($300 million) investment in the LC10 range. Sixty percent of stampings, mainly internal, are a carryover from Maestro, launched just over a year ago. But it looks much different; the nose is softer and only the sculpted door panels are a giveaway.

Montego is a bigger car. Its length of 176 inches is 17 more than Maestro's, and its wheelbase of 101 inches is 2.25 inches more. Weights range from 2,095 to 2,270 pounds.

Mechanically it is similar to Maestro, but it has a broader spread of engines, ranging from the 1.3-liter A-plus (68-HP) through a 1.6-liter S (85-HP) and 2-liter R (102 and 117-HP). Each was developed from an existing unit.

Manual transmissions are bought from Volkswagen (1.6-liter) and Honda (2-liter). The latter, a five-speed unit, will be used in Project XX. At present, the only automatic is on the 1.6 (from VW), but a Honda-designed unit for the 2-liter will be available.

There are six trim levels, including a luxury Vanden Plas and sporty MG with fuel-injected power unit. Also to come are a 2-liter diesel (a direct-injection unit being developed by ARG and Perkins) and a station wagon version.

Nissan first in Europe

Maintains sales lead among Japanese cars

Nissan imports in the UK in March reached a milestone no other Japanese auto company has reached anywhere in Europe: Registration of its one millionth car in a single country.

The event indicates the importance to Nissan of the UK, where its sales performance ensures that, in overall Europe, Nissan stays ahead of Toyota, Japan's leading auto maker. It was one of many reasons why Nissan decided to build its European base in Britain.

Nissan sells more cars in Britain than any other Japanese company in any other European national market. In 1983 the figure was almost 105,000, well over one-third of Nissan's European total.

Total Nissan registrations for 15 countries (detailed Greek statistics were unavailable) gave it 284,610, a market share of 2.7 percent. By contrast, Toyota recorded 231,261 for a European share of 2.2 percent — practically on a par with Volvo.

Continued on Page 28

JAPANESE CAR SALES IN EUROPE — 1983

A manufacturer breakdown from Greece is unavailable. However, Japan took 39.8 percent of the market in Greece with just under 24,500 units. If these are included in the European total, the Japanese share rises to just over 10 percent. In addition, Isuzu began retailing during 1983 (mainly in West Germany and Switzerland); its total was ust over 2,100 units, equivalent to an additional 0.02 percent for the Japanese total.

world news briefs

Renault 11 Turbo: Faster acceleration, better mileage.

Renault 11 goes turbo

A turbocharged version of the Renault 11 (above)—the American Motors Encore— has gone on sale in Europe. The 1.4-liter Cleon gasoline engine with Garrett T2 turbo produces 105-HP and a very flat torque curve. Renault says it can outaccelerate the more powerful R5 Turbo and yield better mileage.

Extra mileage Sierra

Ford of Europe's 1.6-liter Sierra has a revised engine for better mileage, particularly in city driving. The E-Max has a smaller bore, longer stroke and high compression, lean-burn cylinder head. Power remains the same, but the improvement on the ECE mileage cycle averages 9.6 percent.

GM invests in Belgium

GM Continental assembly plants at Antwerp, Belgium, are getting a BF 6.2 billion ($110 million) investment, mainly for a paint plant that will be operating in two years.

Scania outlook improves

The Truck and Bus Division of Saab-Scania Group's production this year is running 30 percent above 1983. An influx of orders since last fall, including a substantial one from Iran, means the Swedish company will have to recruit around 1,000 workers.

Parts deal for Jaguar

Jaguar Cars has taken another step toward an expected public stock offering this summer. It signed a long-term components distribution agreement with Unipart which will result in the reopening of a warehouse near Jaguar's main assembly plant in Coventry. For the past 12 years, Jaguar replacement parts have been distributed with other BL lines.

Poles want new model

Poland's FSO car factory reportedly is looking for a Western partner to provide a replacement for the Fiat 125 version it currently produces. It wants the replacement produced at twice the current rate (60,000 a year), a fourth of them exports.

Ford's reprimand

Ford of Britain has been severely criticized by the Office of Fair Trading for charging very high prices for its replacement-part body panels, and for the way it has tried to eliminate competition from outside suppliers.

Opel strikes accord

Adam Opel employes, fearing that a recent $2.6 billion capital investment plan would mean more automation and fewer jobs, have been reassured. The German auto maker will reduce its 59,000-person payroll by no more than 5 percent over the next five years, a fourth of what the union had predicted.

New faces at Opel

Adam Opel has two new board of management members: Richard E. Durkin, 51, formerly with Chevrolet Motor Division, succeeds John Rhame as finance director, and D. Michael Ross, 44, formerly with Fisher Body Division, succeeds David Campbell as production director. Rhame returns to the U. S. as General Motors comptroller and Campbell joins GM's new small-car group as director-operations.

Setback for Reliant

A prototype of the new sports car being developed by Reliant Motor was destroyed by fire at the company's Tamworth, England, shops in March. The little two-seater—in the MG Midget/Triumph Spitfire category—will debut at the International auto show, Birmingham, in October.

Norwegian changes suggested

A government-appointed committee has recommended that Norway's new-car prices should come down and gas prices should rise. The panel also recommended import taxes by vehicle weight. A family car now priced at $12,000 would drop by 20 percent over five years. At the same time, income lost by the government in taxes would be covered by a 30 percent rise in gas prices.

GM's British loss

General Motors' UK operations last year cost the company some $77 million, a rise of 41 percent over 1982. Vauxhall passenger car operations lost $1.5 million, but depressed worldwide conditions for trucks (Bedford) accounted for most of the deficit.

Ford switches to aluminum

Ford of Europe will gradually switch to aluminum radiators (from copper/brass) for passenger cars. This follows the $36 million investment to convert its Basildon, England, component plant which makes the radiators.

Daf to supply Leyland

Holland's Daf Trucks plans to become a diesel engine supplier to Leyland Vehicles, the financially troubled truck and bus business belonging to BL.

Lead-free agreement

West Germany auto makers and oil companies have agreed on technical standards for lead-free gasoline the government plans to introduce in 1986. The Germans are pressing for a European-wide lead-free introduction, but seem determined to go it alone if they cannot persuade their neighbors.

AC changes hands

AC Cars—famous for its 1960s Ford-engined Cobra sports cars —has changed hands and is moving to Scotland. New owner David McDonald will have the cars built near Glasgow. He plans to expand the miniscule volume of the mid-engined ME300 sports car.

South African deal done

Daimler-Benz's plan to take over its South African production and sales company (UCDD, of Pretoria) has been completed. The company is now known as Mercedes-Benz of South Africa (Pty.) Ltd. Last year the company sold 13,607 cars and employed 5,000 people.

Thatcher for U. S.

Mark Thatcher, son of the British prime minister, has taken a $64,000 a year job promoting sales for Lotus Performance Cars in the U. S.

Renault reigns in 1983 new-car sales

But European competition is getting tougher and closer

By Richard Feast
European Editor

Had it been a horse race, Europe's 1983 new-car sales derby would have been a classic.

As the finish line neared, it was clear the outcome would be close. There were six strong contenders including an American-bred entry that led most of the way and a fast-finishing reigning champion from France.

In the end it was a photo finish, with the blue color of the Renault stable beating the stars and stripes of Ford by a nose.

The competition had never been more intense, and now that the details are available it is possible to see just how close it was. Renault led Ford by only 16,500 units in a market that totaled just under 10.45 million.

Other leading competitors were all in contention. Third went to Fiat Auto, ahead of the VW-Audi Group, Peugeot SA (Citroen and Peugeot-Talbot) and General Motors (Opel-Vauxhall). Other entries such as BL, Daimler-Benz, BMW and Volvo were way down the field.

Only 1.53 percent (160,000 units) separated Renault from sixth place GM. A year earlier the gap between the two was 4.92 percent and more than 491,000 vehicles. This dramatic outcome was a reflection of Renault's serious decline and GM's startling advance. Early returns this year suggest the transposition has been completed, with GM ahead and Renault trailing in sixth place.

Any one of 1983's top six could be 1984's market leader. But whichever it is, the prize will be great. There are a lot of kudos to being first, but no one remembers the other finishers, however close.

Total registrations for the 16 countries in 1983 rose by 4.5 percent to 10,448,222. That didn't match the 10.65 million of 1979, but the bleak days of the early 1980s now are well behind. Auto makers anticipate more growth this year, though not as great as last year.

Last year's recovery was very patchy. More countries reported declining demand than increased buying—nine to seven. This was epitomized in the four major national markets, West Germany, France, the UK and Italy, which between them account for three of every four new models sold in Europe. Between them, there were nearly 508,000 more new German and British customers than the previous year. In France and Italy there were more than 141,000 fewer. This healthy 366,500 addition to the total mainly dictated 1983's overall result. In the remaining 12 countries the number of additional new buyers was 84,500, mainly in Holland, Austria and Denmark.

• Renault's fall in sales was greatly the result of a slowdown in demand in its country of origin. But this was only part of the story, as Renault faced 1983 under pressure from all directions.

The Peugeot group (PSA) won back some of the ground it had lost to Renault in France. In Renault's prime European export market, Italy, Fiat mounted an aggressive sales campaign to go with the launch of its new baby Uno. The combination of falling Italian sales and Fiat pressure was felt by all other auto makers, not just Renault.

In Spain, another large market where Renault is market leader, there was increased competition from the recently opened GM-Espana and its Opel Corsa. Renault lost market share. And it lost small slices of the action in the two large markets where demand was strong, Germany and Britain.

The end result was an 8.7 percent drop in volume to 1,320,532. Renault landed the No. 1 spot solely on its performance in France in December, for up to the end of November Ford was just ahead.

There seems little doubt that Renault pulled a lot of 1984 volume into the end of 1983, whatever the healthy demand for new cars in France in December. In the opening two months of this year, Renault business in France plunged nearly 19 percent compared with an overall trend of 9 percent. It has even fallen behind arch rival PSA in French market share.

Domestic demand for the 9/11 remains good, but Renault's weaknesses are the medium range R18 and small hatchback R5. All direct rivals are newer and brighter. While replacements are being rushed through, Renault's main newcomer is the upper range R25. Whether it can achieve the ambitious volumes planned for it, against some stiff, prestige opposition, remains to be seen.

This year may go down as a low point for Renault. It could easily lose its European lead, and could concede the top slot in France to PSA. Its concerns are compounded by a desire to reduce labor, continuing worries in its truck and bus operations, and recent poor financial results.

• Ford's sales results were its best ever in Europe. It put a brave face on losing market leadership, a missed goal which cost it dearly in promotional support. Its registrations rose 6.3 percent to 1,304,028, a share of 12.48 percent compared with Renault's 12.64 percent.

The company was in part carried along by increased demand in the countries in which its manufacturing is concentrated, Germany, the UK and Spain. But it lost market share in Bri-

Japanese

Continued from Page 27

The only other company topping 200,000 was Mazda with 210,086, a market share of 2.02 percent.

Total Japanese registrations in Europe in 1983 reached a record 1,025,082, up almost 11 percent over 1982, and the first time Japan's total breeched the million mark.

In unit terms, West Germany (256,400) and the UK (194,100) were the most important markets for the Japanese. By market share, however, the key spots were Finland (more than 40 percent) and Greece, Norway, Denmark and Ireland, each more than 30 percent Japanese.

• Apart from Nissan's UK total, each of the other Japanese auto makers sold more in Germany than in any other single market. Toyota was top Japanese importer in Belgium, Ireland, Portugal, Spain and Switzerland. Nissan was tops in the UK, Finland, France and Holland, with Mazda the leading Japanese make in Austria, Denmark, Norway, Sweden and Germany. In the highly restricted Italian market, specialist Suzuki was high with only 625 units.

Nissan's British total nearly doubled the next-best total by a Japanese maker in a single market, Mazda's 58,600 in Germany. Nissan's UK figure, though, is an artificial one. It was frozen at approximately 6 percent when the Anglo-Japanese agreement on quotas was agreed in 1976. Since then, total Japanese imports in the country have been restricted to 11 percent. The cut-off point is double-edged: Nissan believes it could have grown more, but its competitors feel much the same. Frozen at points they had reached in 1976, Toyota, Mazda and Honda feel strangled by restraints. Also, smaller newcomers like Subaru, Suzuki and Daihatsu have arrived, and their numbers mean even fewer units for the majors.

The UK restriction is insignificant compared with those in France and Italy. Japan's quota for Italy is only 2,200. Even though the French market is large, Japan's permissible 3 percent of last year's total would have amounted to no more than 60,500; in the end Japan's registrations were fewer than 54,600.

There are also local restrictions in the large Spanish market and small Portuguese and Irish markets. As a result, the full effect of Japan's auto powerhouse has never been felt in Europe as a whole, and it seems unlikely it ever will be.

Europe sales

Continued from Page 28

tain and Spain (courtesy of GM) and increased only marginally in Germany. Preliminary 1984 results indicate that Ford has slipped still further in Spain and Britain, and that its German share is now being greatly eroded.

Ford achieved a very impressive result last year in France, its main export market, where it registered 143,500 cars for a share of 7.11 percent. This was third only to the 288,000 in Germany and an awesome 518,000 in Britain.

One area where Ford will never be seriously lacking is in the youth of its model range. A Granada may look old by today's standards, but still is quite modern, and a replacement is well on the way. There will be no major model announcements from Ford this year. Instead it will concentrate on plugging gaps and pushing its newly introduced small diesels.

However, continued market pressure from GM (and Austin Rover) in the UK and from VW (and GM) in Germany are indicators of a lower slice of the overall European market for Ford this year.

Fiat Auto, which includes Lancia and Autobianchi brands, improved volume by 4 percent to 1,280,541, equivalent to 12.26 percent of the 16-country definition. (Fiat's own idea of Europe is somewhat smaller and excludes Spain.) It was the only real winner in Italy last year, increasing its share from 51.6 percent to 55.4 percent despite a falling market. The key was Uno, the small car launched with fanfare in Florida early in the year.

Uno (and the whole Fiat range) helped Fiat to increase its business in France, Holland, Belgium, Switzerland, Norway and Denmark. It was the leading importer in Germany, though it lost market share there.

Fiat has decided on a policy of Fortress Europe, having withdrawn from other key world markets. However, there is a temptation to think of it as Fortress Italy; 68 percent of Fiat's European sales last year were in its home market, the highest concentration in any country by any of the leading makers.

Its registrations in France (nearly 121,000) and Germany (101,500) were good, but the company's one export weakness was—and remains—the UK. Its woeful 3.1 percent share in 1982 was cut further to 2.8 percent (fewer than 50,000). Its presence in Spain, the fifth largest market, is almost non-existent following the divorce from Seat.

In short, Fiat's sales lack balance. If the Italian market goes down, Fiat's European share will almost certainly fall with it. Britain and Spain apart, it has some useful export markets as compensation, but more than any other it is a mono-market make.

The VW group has a concentration in its home market too (54 percent of all its European sales last year). But it has its North American exports, as well as manufacturing there.

Overall, VW's 1983 increase was of the order of 2.9 percent to 1,227,211, equivalent to 11.75 percent. A detailed breakdown is not available, but the group's increase was almost entirely on account of the Audi Division.

The success of the new Audi 100 resulted in an increase of a quarter in Audi business, while VW registrations actually declined slightly, despite healthy home demand. It lost market share in its three main export markets, though volumes remained high: 115,500 in France, 100,700 in the UK and just over 91,000 in Italy.

VW's strength was in northern Europe, and it can boast market leadership in Austria and Switzerland as well as Germany. It, too, is handicapped by a thin Spanish presence, though the recent link with Seat — which results in VWs being made in Spain—will strengthen its overall standing.

In addition, continuing increases in German demand and the new generation Golf being produced in record numbers in Wolfsburg indicate an improvement in group fortunes this year. This year could result in a considerable European rivival for VW and Audi.

Fifth in rankings last year was PSA. It recorded a marginal fall in sales (5,500) to end the year on 1,220,098 and 11.7 percent. It chalked up a number of small pluses in national market shares (Switzerland, Sweden, Denmark, Ireland and Greece) but its main thrust last year was in France. It achieved a notable gain.

With new products like the Citroen BX and Peugeot 205, PSA concentrated on clawing back some of its lost domestic share. Despite an overall slackening in car purchases, PSA increased its registrations (by about 28,000) and finished the year with a slice of 32.2 percent compared with 30.2 percent one year earlier.

This year, PSA promises, will see a renewal of the export effort based on the 205 and BX. On the other hand, there is some truth in the comment that PSA business has declined to such an extent that the only way to go is up. When the group was created, by absorbing Chrysler-Europe at the end of the 1970s, its market share was of the order of 18 percent. It has gone steadily down since then, and there are no suggestions that it—or any other company — can achieve such preeminence in the foreseeable future in Europe.

Automobiles Citroen's sales performance was a steady one. It made gains with the BX, but lost a great deal on the GSA range. Overall, it added in the region of only 5,000 units (to 505,000) and thus lost market share in the process.

At Automobiles Peugeot, the Talbot slide continued unabated, and only the performance on the Peugeot side (new 205 and considerably revamped 305 and 505) maintained equilibrium. By the end of the year Peugeot was up around 50,000 units.

So far this year PSA has moved ahead of Renault in France. It was an encouraging sign in view of its professed intention of concentrating on exports. Overall, in the first two months Peugeot's and Citroen's sales climbed; as ever, Talbot was down, in no small part on account of the bitter industrial dispute which halted production earlier this year.

But the most impressive sales performance last year was by GM's Adam Opel and (in the UK) Vauxhall Motors. Total registrations soared by 21.6 percent to 1,161,208, a market share of 11.1 percent that put GM with the front runners at last.

It did not gain a place, but finished a competitive sixth rather than a distance sixth. The key was the opening (at the end of the previous year) of the Corsa factory at Zaragoza, Spain. It gave GM a small car competitor for the first time and a proper entry in the previously closed Spanish market.

In 1981 GM registered 818,500 cars for a market share in Europe of 8.3 percent; market leader Renault took 13.7 percent. The following year GM was at 958,400 and 9.6 percent; Renault had improved to 14.4 percent. Last year the pattern was completely reversed as GM joined the grownups and Renault headed for the recovery wing.

Corsa (known as Nova in the UK) is a big success. Unlike in the U. S., the J-car (Ascona/Cavalier) was exceptionally well received, and the Kadett/Astra continued to provide the bulk of GM's European sales. The model will probably suffer at the hands of the new Golf this year, but Opel's replacement is due this fall. Insiders suggest that it will be a more radical styling job than VW did with the Golf.

GM's traditional European base has been Germany, where it registered nearly 449,000 models last year. But Vauxhall's

Except where indicated, numbers refer to market shares. Top Lines for each country are 1983 figures; the bottom line is 1982. Although some statistics from Greece and Portugal are unavailable, their small volumes do not affect overall results.

Sleuthing out the sales statistics

Auto makers view Western Europe as one market, the largest chunk of business in the world, bigger in recent years than the U. S.

That view is understandable, especially now that the European Economic Community covers 10 countries. But national differences are significant. The average income of a Parisian, for instance, is three times that of a Neopolitan. The EEC has 11 prime languages; a myriad of national regulations; socialist, centralist and conservative governments; and a currency exchange system which does not always move with one accord, despite a sinister-sounding financial device known as "The Snake."

Neither are there any official European automotive registration statistics. Europe, to one auto maker, is 16 countries; to another it is 14 or 15. In some countries (West Germany, for example) certain vans are listed as the passenger car statistics; in others (Britain) they are not.

Some countries' statistical reporting systems are fast. The UK and Sweden issue final and accurate registration statistics within days after the close of a month. Most other countries have theirs within the month, but some are hopelessly late and erratic. Accurate Greek statistics are rare, and hardly anyone has ever seen a complete set of Italian registrations. All European auto makers work on the basis of sales to dealers and organize their own unofficial exchanges of information. This became apparent when Automotive News embarked on a project several weeks ago to compile definitive European statistics. The project was important because of the closeness in sales of Europe's six leading auto groups.

The results, for the most part based on official statistics from national bodies, are printed in tables above and on Page 30. A few statistics were provided by manufacturers, but even then there are some gaps. Nevertheless, the statistics give the most comprehensive picture of 1983 and 1982 registrations as has been published to date. They show the close competition among the six leading auto makers, covered by 1.53 percentage points; the year-end margin Renault had over Ford (16,500 units out of a market of nearly 10.5 million) to retain the No. 1 sales spot; the dramatic sales decline by Renault and huge gains by the two U.S.-owned groups, Ford and, particularly, General Motors; the high overall level of sales, 4.5 percent above the previous year but still some way behind the 10.65 million achieved in 1979; the wide variety in national sales patterns—record levels in the UK, strong growth in Germany and small declines in France and Italy; and record numbers registered by the Japanese makers—more than one million for the first time.

VW Golf is top seller

Escort is second in Western Europe

By Richard Feast
European Editor

Volkswagen Golf (Rabbit) was the best-selling car model in Western Europe in 1983, despite an interruption in production to introduce the second-generation version last fall. A late sales charge as production climbed resulted in full-year Golf registrations of approximately 464,000.

PRODUCTION OVERSEAS

BRAZIL
Cars

	1 mo., 1984	1 mo., 1983
Farus	3	10
Fiat	8,777	10,584
Ford	12,376	12,510
General Motors	10,669	16,244
Gurgel	5	0
Puma	11	23

Ford Escort was second at 442,000, Renault 5—which vied with Escort for first place in 1982—fell to 384,000, marginally behind the Ford Sierra and way behind General Motors' Kadett/Astra with 401,000.

These unoffcial figures emerge from a country-by-country survey of the top 10 sellers in 14 European markets.

Golf gained firsts in four countries, all in the northern region: West Germany, Belgium/Luxembourg, Switzerland and Austria.

The only other model to gain more than one first place was Opel Kadett, tops in Holland and Denmark. Ford's No. 1 spots were spread across its model range, with Escort the best seller in the UK, Sierra in Norway and Fiesta in Ireland.

Fiat's new Uno went straight to the top of the Italian chart, pushing the 127 from first to fourth place. With 245,000 units sold in its country of origin, Uno's numbers were greater than for any other model in any other national market in Europe. That honor went in 1982 to Renault 5 in France (more than 272,000); but decline in demand in France and increased competition resulted in Renault registering just under 214,000 R5s last year. That was still good enough for No. 1, but represented less than 11 percent of the market compared with around 15 percent two years earlier.

In France the R5 was pressed by the R9 and R11. The combined success of these two basically similar models was 266,000.

In Spain it was a similar picture. The newer R9 displaced the R5/7 to become the country's most popular car. (The R7 is a unique Spanish product—an R5 with a conventional trunk.)

Sweden's best seller was the Volvo 200 at almost 50,000 registrations.

The only model from outside Western Europe to make it to the top was the Soviet Union's Lada in Finland, where Russia has close trading links. It is also a reflection of how well a cheap car can sell in a country where taxes create very high retail prices.

It is a similar story in much of Scandinavia. Because of the low-cost cars of Comecon and Japan, the highest-placed European car in Finland was in sixth place (Escort). In Denmark the Czech Skoda (first in 1982) was just beaten by Kadett. In Norway, four out of the top 10 were from Japan. The exception to the major presence of Japan in Scandinavia was Sweden, where its slice was only 15 percent.

No Japanese model made it to the top in Europe last year. But there were three runners-up: Mazda 323 in Austria, Nissan Sunny in Finland, and Toyota Corolla in Ireland. Mazda was the most consistent Japanese performer in the various top 10s, with eight placings among the 14 listings.

Europe sales

Continued from Page 29

efforts meant that the UK became much more significant than previously, with more than 262,000 units. Its French market share improved considerably (77,000-plus) and it retained its Dutch leadership with nearly 75,000. Its Italian result (55,000) was held in check by Fiat but the 53,000 in Spain was a solid plus.

This year GM can make further progress, given the overall recovery in Germany and its extraordinary efforts to catch Ford in the UK; it has already overhauled Austin Rover for second place. Given anticipated European growth, though, even over the medium term GM may be reaching the limits of its European capacity. A decision to extend its Spanish operation would come as no surprise.

Of the other European auto makers, BL was a distant seventh with just over 4 percent. This was more a reflection of its UK base, where 79 percent of its customers were last year. BL's Jaguar and Austin-Rover Divisions will be making bigger efforts in Europe this year, but simple capacity limits — at 750,000 — will prevent it ever becoming a front-runner.

Daimler-Benz's foundation in Germany contributed mostly to its 3.2 percent overall. Of its 339,000 European conquests, 246,000 were in its country of origin. Its main exports were to France (nearly 19,000) and Italy and the UK (around 13,500 each).

Volvo's total of 231,000 was based on returns mainly from Sweden and the UK with around 61,000 each. Italy (17,000 last year), France (14,000) and Germany (15,000) present the biggest challenges to the Swedish company.

BMW's 304,000 comprised just over half in Germany and solid chunks in its special market niches across the whole of Europe. In number terms it did best in France (33,000), Italy (28,000) and the UK (25,000). In market shares its best exports were to Switzerland (4 percent of total sales) and Austria, Holland and Belgium with around 3 percent each.

Tops '78 record by 3.4 percent

First-quarter truck sales hit peak

Continued from Page 16

cent, 11,958 versus 10,374, and heavies totaled 38,278 units, a gain of 35.4 percent over the year-earlier 28,264.

Sales of compact trucks in the first three months showed a drastic improvement over last year.

Through March, the total was 399,792 units, an increase of 77.9 percent over the year-earlier 224,682. They accounted for 40.1 percent of the industry's three-month sales.

March sales of the compacts totaled 145,152 units, a gain of 54.7 percent over the year-ago 93,828. They accounted for 38.4 percent of the month's sales.

Three-month sales of the independent Japanese-built compacts were up 52.2 percent to 130,792 units, compared with 85,931 a year ago. March sales totaled 42,207 units, a gain of 11.5 percent over last year.

• With the addition of the Chrysler T-wagons and van, the downsized Jeep Cherokee and Wagoneer and the U.S.-built Nissan/Datsun pickup, sales of the domestic compacts in the first three months and March were almost double those in 1983.

Through March, sales totaled 269,000 units, an increase of 93.9 percent over the year-earlier 138,751. During the month, dealers retailed 102,945 units, up 83.9 percent from last year's 55,978.

Truck sales by Big Three dealers through March totaled 757,948 units, up 40 percent over last year's 541,516. During the month, they retailed 299,465 vehicles, a gain of 31.8 percent over the year-earlier 227,222.

Ford's first-quarter total was 280,321 units, an increase of 31.3 percent over the year-ago 213,547. The March count was up 22.7 percent to 112,679 units, compared with 91,844 last year.

Three-month sales by Chevrolet dealers were 29 percent higher than a year ago, 270,799 versus 209,968. During the month, they sold 104,738 vehicles, up 26.8 percent over the year-earlier 82,602.

• Dodge and Chrysler-Plymouth dealers retailed 127,993 vehicles through March, an increase of 116 percent over the previous year's 59,259. March sales were up 97.9 percent to 54,533 units, compared with 27,552 in the same month in 1983.

GMC reported that March sales were higher for the 12th consecutive month. The total was 27,515, a gain of 12.3 percent over the year-earlier 24,505. Through March, dealers retailed 78,835 units, up 34.2 percent over last year's 58,742.

Sales of Jeep four-wheel-drive vehicles were up more than 100 percent for the quarter and the month. The three-month total was 34,548, a gain of 122.2 percent over last year's 15,546, and March sales were up 107.5 percent, from 5,851 units in 1983 to 12,143.

Volkswagen dealers sold only 245 compact pickup trucks in the first three months, compared with 1,577 a year ago. March sales were down from 500 a year ago to 68. The vehicle no longer is being produced.

Nissan/Datsun dealers retailed 59,185 compact trucks in the first quarter, up 85.9 percent over last year's 31,839. This year's count includes 27,346 units built in the U.S. and retailed as domestic vehicles.

• During the month, 22,980 Nissan/Datsun trucks were retailed, a gain of 98.7 percent over the year-ago 11,563. Included in the March total, an alltime high, were 11,179 U.S.-produced vehicles.

Three-month Toyota sales were 69.3 percent higher than a year ago, 58,584 versus 34,595. During the month, dealers retailed a record 24,478 vehicles, up 63 percent from last year's 15,019 units.

Record March sales also were reported for Mazda trucks. Dealers sold 12,330 units, up 46.5 percent over last year's 8,417. The three-month total of 30,769 also was an alltime high, and an increase of 81.9 percent over the previous year's 16,913 units.

March and first-quarter sales by Isuzu and Mitsubishi dealers set new marks, too.

Isuzu dealers retailed 5,900 units through March, up 20 percent over last year's 4,916. The March total was 2,346, a gain of 12 percent over the year-earlier 2,094 units.

Three-month sales by Mitsubishi dealers were 88.4 percent higher than last year, 3,700 versus 1,964. The March total was 1,251 percent, up 65.3 percent from the year-earlier 757 units.

Southeast Subaru promotes Goetze

WEST PALM BEACH, Fla.— William D. Goetze has been named vice president and general manager of Southeast Subaru, Inc. The firm is distributor for Florida, Georgia and South Carolina.

Goetze joined Subaru in 1976. Before that, he was with General Motors, Chrysler Corp. and Mazda Motors of America (East).

Award-winning brake system

Australian-designed Girlock braking system, used in the Chevrolet Corvette, received an award from the Industrial Design Council of Australia.

Australian brake system captures award for design

SYDNEY, Australia. — The Australian-designed Girlock braking system, now fitted to the Chevrolet Corvette, has won a Design Council Award.

That award recognizes the technical superiority of the Sydney design which has won its place in Detroit, the toughest of all automotive markets.

The award was granted by the Industrial Design Council of Australia.

The lightweight design has a single piston, finned floating alloy caliper riding on two permanently sealed and lubricated guide pins.

The braking torque is transmitted independently through high performance semi-metallic pads via a rigid closed loop iron carrier.

Girlock has 85 percent of the Australisn disk brake market and expects to extend its inroads into the international market.

Maryland dealers plan Greek meeting

BALTIMORE. — The Automobile Trade Assn. of Maryland will hold its fall business meeting Sept. 30-Oct. 8 overseas.

The meeting will be held in Athens and on a three-day cruise of the Greek islands.

Prosecutor calls it story of dream turned to nightmare

DeLorean drug trial opens in L.A.

Continued from Page 2

its case against DeLorean, combined two separate investigations.

One involved William M. Hetrick, who was arrested and later pleaded guilty to supplying the cocaine involved in the case, and the other involving DeLorean.

Walsh said the drug deal involving DeLorean totaled $1.8 million.

The prosecution's first witness in the case was Benedict Tisa, who posed in an undercover role as James Benedict, a vice president of Eureka Savings & Loan headquartered in San Carlos, Calif., a suburb of San Jose.

Tisa testified that his first contact with DeLorean, which was recorded and played in court, was when DeLorean called him on the advice of Hoffman.

DeLorean had called to check the net worth of Hoffman, with whom he was considering a "transaction," Tisa said. Tisa, as Benedict, said Hoffman's net worth was in "eight figures."

DeLorean asked if Tisa would be interested in offering some financing for some of DMC's 1,300 cars in inventory in the U. S.

Through Tisa's testimony and a series of audio and videotapes played in court, the government painted a picture of DeLorean anxious to find financing for his auto company and slowly beginning to talk to Tisa about the alleged drug deal with Hoffman.

Meanwhile, Tisa was attempting to interest Hetrick in using DeLorean's business to launder funds.

During the Sept. 8, 1982, meeting between Tisa and DeLorean, the former auto maker said he would be unable to funnel the money through the U. S. car company, which was publicly held. However, he said it could be done through DeLorean Mfg. which owns Logan Mfg., a snow grooming equipment company based in Logan, Utah.

DeLorean described Logan as "where I derive my personal income . . . the car business is getting started, but I take two or three million a year out of there (Logan) as my personal income. That's what I live on."

DeLorean said he purchased Logan from Thiokol three years earlier for about $14.5 million and suggested that Tisa's investor put in a similar amount, and he (DeLorean) would give him half interest in the operation as collateral.

The money would be laundered by paying it out to the investor in parcels ranging from a quarter to a half million for work supposedly done over previous years, according to the videotape of the conversation.

"This being completely my private deal, I can construct a record so that we can go back," DeLorean said, "back to 1978 or '79 when I bought it and have him (Hetrick) participate all the way up the line."

Tisa and DeLorean also discussed how long it would take before the profits from the transaction would begin to come in and it was disclosed that those profits would be used to pay off the investor in Logan. (Tisa had yet to identify Hetrick to DeLorean as the source of funds.)

DeLorean seemed more anxious to see the funds that were to be funneled into his operation than the profits from the drug transaction. A series of audiotapes played by Tisa were of phone calls from DeLorean after the videotape meeting asking if Tisa had met with the investor yet.

The videotape between Tisa and Hetrick, on the other hand, showed Hetrick apprehensive of being involved in the laundering scheme as well as a drug deal involving Hoffman. Hetrick said he had lost money in previous business dealings with Hoffman.

When told that someone else would be supplying the money for the drugs, Hetrick said he would go through with the deal, but still had reservations about the laundering scheme.

But Hetrick agreed to talk with DeLorean and said if the drug deal went off as planned, he might consider the scheme.

Mazda, Kidney Foundation team up

Singer Juice Newton and Mazda dealer Dino Grossi, Martin Mazda, Woodland Hills, join 12-year old Wesley Adam at UCLA's pediatric dialysis unit to kick off the 1984 Mazda/National Kidney Foundation Drawing. Working with Mazda dealers throughout Southern California, the Kidney Foundation hopes to raise $50,000 for research and patient care. Newton is the honorary chairperson for the National Kidney Foundation of Southern California.

Two-front legal skirmishing to multiply DeLorean woes

Continued from Page 2

claims for $3 million, $250,000 of which will be paid up front with the balance collectible if and when the trustee successfully adds to the estate. There will be a hearing on the agreement on May 1 in bankruptcy court here.

The partnership also agreed to drop DeLorean and his companies from its lawsuit while maintaining its suit against Wall Street Investment Banker Oppenheimer & Co., which put the deal together. That lawsuit, along with several others, will be tried in Detroit before U. S. District Judge George Woods.

In addition to the suit against Oppenheimer, the partnership trustee has filed a $30-million class-action lawsuit against Big Eight accounting firm Arthur Andersen in Federal Court in Miami. The suit charges Arthur Andersen, as auditor of the partnership and most of DeLorean's companies, was negligent and guilty of "professional malpractice" for allowing the funds to disappear without a trace.

Meanwhile, the federal grand jury investigation which for months was bogged down, is building steam. The subpena to DeLorean was another sign the U. S. Attorney's Office and the FBI are moving. The grand jury also has subpenaed bank records, company records and individuals in its investigation of a variety of fraud charges.

Sources close to the situation believe the U. S. Attorney's Office in Detroit is proceeding with its investigation here at full throttle and completely independent of the Los Angeles drug trial.

The result of all these offensives is that no matter what happens in the Los Angeles drug trial, there is little chance John DeLorean will be able to avoid dealing with a host of more complex problems in Detroit.

European market badly scrambled in first quarter

Continued from Page 1

ket. There have also been impressive export gains, resulting in an industry-best exxpansion of 13.9 percent to 377,700 in total.

GM's success is based mainly around the substantial gains made by its Vauxhall Motors subsidiary in the UK. In overall terms, GM is up 10.6 percent at 347,100 units. That is a scant 500 fewer than Ford, which is down 10.2 percent at 347,600 on the same period.

Part of the reason for Renault's decline is the overall fall in demand in its two main markets, France and Spain. In addition, it has lost market share to Fiat in Italy, its main export market.

Sales performances within the VW and PSA Groups differ widely. In the first quarter, VW's Audi is down about 10 percent but VW itself is up to more than 5 percent. At PSA, Peugeot's strong gain of more than a quarter is offset by a small slip at Citroen (5 percent) and a massive 43 percent drop in Talbot registrations.

Chrysler L-car remains alive but size is debated

Continued from Page 2

ly at some low-volume production in Mexico, Iacocca said.

Miller added Chrysler already is in compliance with Mexican auto trade requirements and any such move would be in response to capacity demands in the U. S.

But it is unlikely that big cars would be built there, despite rumors that have been circulating in Detroit.

"They're building good quality — we've looked at their K-cars versus our K-cars, so it's possible we would take some of the units that are dying off to the 25,000 to 50,000 level and move them offshore," Iacocca said.

But later, Executive Vice President Richard Dauch cautioned that the possibility was "a low-priority item." The complexity of larger-car assembly makes Mexico an unlikely prospect, he said.

Charges fly as Oklahoma defeats fleet-subsidy bill

Continued from Page 1

and established procedures for termination buy-backs of equipment, among other issues.

But it was clear the provision on subsidies was the crux of the battle.

It was so central that GM President F. James McDonald wrote to Gov. George Nigh urging the veto of the measure if it passed. The letter and other statements by GM made it plain that if he did not, the auto maker would flex its corporate muscle and reevaluate its position in the state. A copy of the letter was obtained by Automotive News.

McDonald said flatly, "This bill is inimical to the interests of motor vehicle manufacturers, distributors and consumers and signals to the business community that Oklahoma is an undesirable state in which to locate or conduct business. For these reasons . . . General Motors respectfully requests that you veto this bill."

On the fleet subsidy issue, McDonald told Nigh the company would face the dilemma "of complying with the provision and thus unfairly burdening customers in other states, refusing to comply and risking the loss of our right to sell in the state of Oklahoma as well as incurring fines and penalties, or filing a lawsuit against the State of Oklahoma to enjoin the enforcement of the act and to have it declared unconstitutional."

McDonald went on to state that other provisions of the bill were requiring confidential information regarding sales and marketing plans and other issues. McDonald said the bill is special-interest legislation which will further erode the business climate in the State of Oklahoma, injure automobile manufacturers and distributors and adversely affect the interests of consumers.

The issue was clouded by the plant here. McDonald's letter came shortly after GM lost a tax appeal case after the U. S. Supreme Court refused review.

There have been reports that GM threatened to close the plant because of the tax situation and the subsidy bill. A. H. McMullen, GM's regional governmental affairs manager, denied this, saying there were no threats to close the plant.

But GM did say "it may reevaluate a planned renovation of the facility in 1987-88," he said. McMullen said the bill was the "final straw" and a "determining factor in a long series of events."

GM was also charged with threatening dealers in the state, which McMullen denied.

Sources said GM representatives called dealers and asked "what they were going to do with their buildings when the company could not supply" cars to them.

McMullen admitted that zone managers contacted dealers to explain GM's position on the bill and ask them to contact their legislators and support the corporation. But he denied that threats were made.

• If there were threats, it did not destroy dealer unity in favor of the bill. State Rep. Harold Hale, a cosponsor of the bill, told Automotive News that 95 percent of dealers in the state were behind the measure, which was unusual solidarity.

"The norm for support of most measures is about 25 percent," Hale said. "This tells me there is something wrong with the franchise system." He added that the issue "is not dead."

It was Hale who termed the changing of the votes as very unusual. Reports indicated that the session in the House turned into a shouting match and name-calling contest. It was also implied that the House reneged on its support of the dealers.

In order to put pressure on the legislators, GM hired lobbyists to beef up its own staff in the effort to defeat the measure. None of the other auto makers entered the battle.

The Oklahoma dealer association agrees with Hale that the issue is far from dead.

movers and shakers

Olsmobile

Oldsmobile has promoted **Ivan W. Stebbins** to assistant general sales manager in charge of service. He succeeds the late **Kermit R. Hummel.**

Kenneth E. McCourt, who was administrative assistant to the general sales manager, has succeeded Stebbins as general service manager.

In another home-office appointment, **Gary W. Sigman** replaced McCourt as administrative assistant to the general sales manager.

Oldsmobile also named three zone managers. **Patrick J. Hayes** succeeded Stigman as head of the Charlotte zone; **Charles D. Hardy Jr.** replaced Hayes as Washington zone manager, and **Robert W. Dudding** was appointed St. Louis zone manager, replacing Hardy.

Stebbins joined Oldsmobile in 1951 and served in Lansing, Jacksonville, Detroit, Minneapolis and Chicago.

He also was Southwest regional service manager, assistant zone manager in Cincinnati and assistant general service manager before becoming general service manager in 1978.

McCourt started at Oldsmobile in 1968 and held service posts in the Detroit, Houston and Chicago zones.

He also has been service promotion manager for Oldsmobile, training development manager for General Motors and technical service manager for Oldsmobile.

Stigman has been with the division since 1961 and his duties have taken him to Atlanta, Jacksonville, Los Angeles and Lansing. The Charlotte assignment was his first as a zone manager.

Hayes joined Oldsmobile in 1953 and his assignments have been in the Detroit and Cleveland zones and at division headquarters in Lansing. He was assistant zone manager in Washington before becoming zone manager there.

Hardy started with Oldsmobile in Charlotte in 1962 and later served in Philadelphia and Atlanta and as fleet manager for the Eastern U. S. before becoming head of the St. Louis zone.

Dudding joined General Motors in 1953 with what is now Detroit Diesel Allison Division. Since moving to Oldsmobile in 1960, he has served in Washington, Boston, Newark, New York and Portland and as area fleet manager for the Atlantic region. Most recently, he has been fleet sales manager for the Eastern U. S.

Ivan W. Stebbins

Kenneth E. McCourt

Ford Division

Ronald M. Tillier has been appointed Philadelphia district sales manager for Ford Division. He succeeds **Donald S. Cook Jr.,** who has been named general marketing manager for Ford of Canada.

Tillier has been district sales manager for Ford Division in Indianapolis since 1981. He joined Ford Motor Co. in 1965 and has served in New York, Dearborn, Minneapolis, Chicago and Newark.

The Philadelphia district supervises the activities of 146 Ford dealerships in southeastern Pennsylvania, southern New Jersey and Delaware.

General Motors

Richard F. O'Brien has been named general director of employe benefits for General Motors. He succeeds **Kenneth E. Olthoff,** who was appointed personnel director for GM's Packard Electric Division.

O'Brien, 41, joined GM in 1966 and was named assistant treasurer in 1981. He has been general director of worldwide personnel administration since 1982.

Olthoff, 53, has been with GM since 1954 and has been general director of worldwide employe benefits since 1981.

George A. Peapples, 43, has been named to the newly established post of director of strategic business planning for the Chevrolet-Pontiac-GM Canada group of General Motors.

Peapples has been vice president and finance manager for GM of Canada since 1982. He has been with GM since 1964, except for three years (1977-80) as an assistant secretary of the Navy with the U. S. Department of Defense.

Charles E. Golden, 37, has been appointed assistant treasurer of GM to succeed **Leon J. Krain** who now is vice president and finance manager for GM of Canada.

Golden has been director of forward business planning for Fisher Body Division since 1982. He joined GM in 1970 in the treasurer's office in New York.

American Motors

James R. Murphy has been appointed director of advanced product planning for American Motors.

He had been manager-advanced product planning for AMC since 1980. Murphy joined AMC in 1979 after eight years with Ford Motor Co.

Chevy for Miller

LEEDS, Ala. — Luther Miller has signed a Chevrolet franchise here.

Youngest GM dealer in U. S.

At age 22, Graye H. Wolfe, seated, is the youngest GM dealer in the nation, according to NADA. A graduate of NADA's Dealer Candidate Academy and Northwood Institute, he has worked in dealerships for 10 years. His dealership is Better Buick-GMC in Caldwell, Id. Looking on as Wolfe signs an agreement are L. P. DeZan, left, Buick Portland zone district manager, and W.E.L. Powell, Buick Portland zone manager.

Iacocca: Chrysler may move some action overseas

BOSTON. — In reaction to the General Motors-Toyota joint venture, Chrysler Corp. Chairman Lee Iacocca said that his company would probably move some operations overseas.

Speaking to a group of security analysts here, Iacocca said, "I'm not going to worry about jobs. I will probably go offshore and do whatever else I have to do to remain competitive."

Although the FTC has approved the joint venture, a lawsuit which Chrysler filed in January to stop the project is pending..

Chrysler has a $600 million program underway to develop a line of subcompact cars, but Iacocca said that, come September, the company would probably drop that project and instead try to form a joint venture with a foreign car maker.

New minivan plant a possibility

How Chrysler will spend big bucks

By Kathleen Hamilton
Financial Editor

Chrysler Corp. executives outlined some of the ways the company will be spending its record profits while trying to ensure repeat performances.

A second facility for minivans probably will be added, Chairman Lee Iacocca said. Meanwhile, Chrysler is negotiating with the Canadian UAW for a quick-term solution to its "backlog of 100,000 that we don't know how to dent," Iacocca said.

Several plans are being eyed, all of which would include four-day workweeks, shifts longer than eight hours and seven-day-a-week use of the Windsor plant.

Allowing time for maintenance of machinery is one concern, but Iacocca said 75,000 to 80,000 minivans a year could be added to production, starting this summer. It would take 16 months to build a new line, he said.

Iacocca singled out the shuttered Canadian engine plant and a small V-6 as likely candidates for revival.

Chrysler also is looking at the possibility of building vehicles in Mexico, where it has open capacity, he said.

Chrysler is not seriously negotiating with Volkswagen or Peugeot these days, but it is in "heavy negotiating with Mitsubishi and some others about the possibility of building our smallest car somewhere else," Iacocca said.

An upscale U. S.-built small car is still a possibility, one senior executive said.

Our definite program is a 1987 front-drive New Yorker and probably a derivative even higher up the luxury scale — described by Iacocca as an Imperial-type four-door. Investment will be "six or seven million bucks," Iacocca said.

Chrysler may move upscale in trucks, too, Iacocca said, although he also stressed the need to build base-price minivans — something that isn't happening now because of high demand for luxury models.

Chrysler also will be spending its money on executive bonuses, if stockholders approve a director-backed proposal.

Chrysler's bonus formula was unused for so long that it expired in 1981, and Chrysler directors must now ask shareholders for approval of a new formula, said Douglas Fraser, retiring Chrysler board member and former UAW president.

Because the plan will cover Chrysler's mid-level executives, like plant managers, who had wages frozen for several years, Fraser said he voted for the proposal.

But he objected to the formula's retroactivity. If approved, executives will receive bonuses for 1983 — a retroactivity worker's didn't get, Fraser said.

Details are expected to be made public early this week with publication of Chrysler's proxy statement. First payments could be made this summer, Iacocca said.

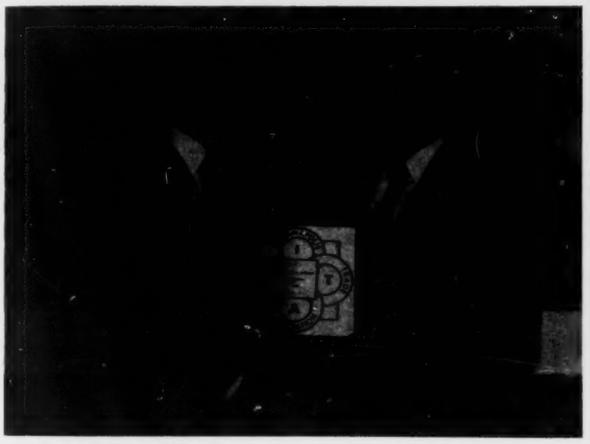
Fraser's successor at the UAW helm, Owen Bieber, is scheduled to meet with members of the Chrysler nominating committee within 30 days and will probably meet with the entire committee at the May or June meeting, Iacocca said.

One concern is that making Bieber a director would set a precedence for a UAW seat on the board. Another is that no other auto maker can have a UAW seat while Chrysler has one, Iacocca said. It may be time for another maker to carry on the experiment, he said.

Chrysler will expand its dealer network, but not much above the 4,000 mark, as vehicle output climbs, Iacocca said. He estimated dealer return on investment this year will be in the range of 35 to 40 percent, breaking last year's record.

"We're not going to get into overdealing, but we have always lagged behind General Motors and the Japanese in this area," he said.

Chrysler's productivity has soared from 10.2 cars built per employe in 1980 to an annual rate of 19.3 per employe this quarter, he said. In the first quarter of last year, Chrysler was building at a rate of [illegible]8 per employe, he said.



Indianapolis officers

The Indianapolis Auto Trade Assn. has installed new officers. Michael Shore, left, Harry A. Sharp Co., Inc., incoming president, presents the honorary president's plaque to outgoing president Tom Roush, Tom Roush Lincoln-Mercury-Mazda.

Inventory of import cars is pared to 27-day supply

Continued from Page 1

year earlier, there were 92,727 trucks in inventory, a 61-day supply.

The combined imported car and truck inventory April 1 totaled 273,324, a 27-day supply, compared with 270,576 on March 1, a 30-day supply. A year ago, the combined inventory was 380,135 on April 1, a 39-day supply.

The inventory of Japanese-built cars April 1 totaled 94,499 units, the lowest level since AUTOMOTIVE NEWS began keeping import inventory records and a mere 16-day supply, compared with 113,070 units a month earlier, a 20-day supply.

Japanese nameplates and their April 1 days-supply figures were: Toyota, 7; Nissan, 15; Honda, 15; Mazda, 15; Mitsubishi, 19; Subaru, 32, and Isuzu, 40.

In addition, Chrysler Corp. had a 56-day supply of Mitsubishi-built cars, including Dodge Colt, 46½; Plymouth Colt, 51; Plymouth and Dodge Vista, 54; Plymouth Conquest/Sapporo, 112, and Dodge Conquest/Challenger, 122.

West German-made cars in inventory April 1 totaled 84,116, a 67-day supply, compared with 62,374 a month earlier, a 55-day stock.

German nameplates and their April 1 days-supply figures were: Mercedes, 27; Porsche, 34; Audi, 66; BMW, 75, and Volkswagen, 104. (The VW figure is for imports only; VW also had a 100-day stock of U.S.-built Rabbits.)

Days-supply figures for other European lines included: Jaguar, 19; Alfa Romeo, 23; Saab, 44; Volvo, 47; Peugeot, 52, and Renault, 187.

Days-supply figures for imported pickup trucks April 1 were: Mazda, 12; Nissan, 17; Toyota, 20; Mitsubishi, 27; Chrysler Corp./Mitsubishi, 97, and Isuzu, 113½.

VW-Mexico launches anniversary Beetle model

MEXICO CITY.—As it completes 30 years in Mexico, Volkswagen de Mexico is launching its Volkswagen Sedan Commemorative Edition — a deluxe version of the Beetle.

From the first, the Beetle has been accepted well here. Initially, it was presented to the Mexican public at the National University of Mexico here in 1954.

Chrysler counts a record profit of $706 million

Continued from Page 3

for Chrysler: Its sales outside the U. S. and Canada rose 13 percent, from 354,206 cars and trucks to 516,672. Most of those sales were in Mexico, a market that fell 40 percent last year.

Iacocca reiterated what has become a fairly common Detroit theme: Recent record profits have not yet offset damage done during the four-year auto slump. Iacocca recalled 10 quarters of losses — what he called "the red sea."

"We made up for two lousy quarters instead of just one in the first quarter by coming in with a number of $706 million," he said.

Although Chrysler profits were higher than almost every auto analyst had predicted, its stock price fell on the day profits were announced.

David Healy, Drexel Burnham & Lambert auto analyst, speculated that Iacocca's week-earlier promise to analysts in Boston that profits would be a "barn-burner" overprepared the market. Some were expecting a billion-dollar quarter, and bought on that speculation, he said.

GM's Smith calls technology key to industrial leadership

TOKYO. — The worldwide technology race facing business is ultimately a race for survival, General Motors Chairman Roger B. Smith said.

"The winners in the business world from here on out will be those companies who are most aggressive, creative and successful in implementing advanced technological concepts," he said.

"They will be the companies who lead in the rapid and appropriate implementation of technology — not just technology for technology's sake. They will be the companies who bring advanced technology to market in an affordable and world-class quality package — one that gives true value to the customers."

Speaking at the opening of the new Nikkei Industry Research Institute, Smith said increasing competition in the worldwide motor vehicle industry is forcing the advancement of new technology.

• "This has had a profound effect on the products we make, the plants where we make them, and the workforce that puts them together," he continued. "For if we manufacturers are to succeed — indeed, to survive — the cars and trucks of the future must be the highest quality we can make them — and they must be built in the factory of the future by the workforce of the future."

Smith said GM's goal in the technology race "is to be the world's leader in all technologies appropriate to us."

One example of GM's technological leadership cited by Smith is the Saturn Project to create a new family of subcompact cars using entirely new production technology and management techniques.

Referring to GM's venture with Toyota to produce a new small car made and sold in the U. S. and with Fanuc of Japan to produce industrial robots for use worldwide, Smith said: "Down the road, we see ourselves entering more joint agreements and cooperative arrangements — the way so many other companies are around the world."

GM-Toyota Chevy to turn profit for GM, Smith says

Continued from Page 1

said Smith. Later, he referred to the UAW as being one of the problems in introducing new working methods.

Shoichiro Toyoda, Toyota president, said that the basic idea was to adopt the Toyota manufacturing system as far as possible, but taking into account distance and quality.

Eiji Toyoda, Toyota chairman, who did most of the talking on Toyota's behalf, said that the main reason why Toyota wanted to get involved was to overcome trade friction, although most observers would feel that Toyota could have done a much better job of doing that by com-

However, Smith said that the ing to the U. S. on its own. way GM's manufacturing facilities are set up at present, there is no way it can meet the demand for small cars, even taking into account the imports from Suzuki and Isuzu.

Therefore, it needs the small Chevrolets that will come from Fremont and may still need to introduce extra models on its own account.

Both Toyoda and Smith said they were opposed to protectionism, and Smith said that he would like to see a return to free trade with an end to voluntary restraint. But, he said, he hoped the Japanese Government would exercise its wisdom on how and when it did this.

Hollack elected

PITTSBURGH. — Robert J. Hollack, vice president and general manager of Country Motors Honda/Saab, has been elected president of the Greater Pittsburgh Honda Dealers Assn.

125,432 cars built in holiday week

Good Friday cuts auto production

By Joe Wilssens
Staff Writer

Last week's domestic auto production fell nearly 30 percent from the previous week's output. The Good Friday holiday was a principal factor.

U. S. auto makers slated production of 125,432 cars, 29.41 percent lower than the prior week's 177,695 and 8.08 percent below the year-ago week's output of 136,457.

To date this year, 2,650,126 cars have been completed, up 39.36 percent from 1,901,639 built in the comparable period last year.

Breakdown for the week by company was: General Motors, 54.39 percent; Ford Motor Co., 24.74 percent; Chrysler Corp., 14.55 percent; American Motors, 3.07 percent; Honda, 1.75 percent, and Volkswagen of America, 1.50 percent.

All nine of Ford's auto assembly facilities scheduled daily overtime last week with Atlanta, Kansas City, Wayne (Mich.) and Wixom (Mich.) working extra Saturday (April 21) hours.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 and No. 2 worked two 9-hour daily shifts, while Jefferson (Detroit) worked two 8½-hour daily shifts last week.

Groups of GM diesel owners to merge at Reno meeting

By Richard Johnson
Staff Writer

Several consumer groups representing dissatisfied owners of General Motors diesel cars are scheduled to meet in Reno later this week to unify their efforts and plot new courses of action.

Four organizations, including three which several weeks ago announced they would unite under the name National Assn. of Diesel Owners (NADO), plan to merge, elect officers and set future strategies at a meeting April 27 at the MGM Grand Hotel in Reno.

The groups are General Motors Diesel Users Demanding Satisfaction (GM-DUDS) from the Chicago area, the New York-based Lemon-On-Wheels, Disgruntled Diesel Owners (D-DOG) of Virginia and the Seattle-based Consumers Against General Motors.

The diesel groups sprouted in response to mechanical problems associated with a 5.7-liter, V-8 diesel engine built by Oldsmobile and installed in Oldsmobile, Cadillac, Chevrolet, Pontiac and Buick models from 1978 through 1981. Unhappy diesel owners have filed numerous lawsuits against GM, including several major class actions.

Finkelberg said possible expansion of the group's efforts to include dissatisfied owners of other GM products will be discussed at the Reno meeting.

GM-DUDS halted negotiation of case-by-case settlements with the corporation in early March, claiming that GM had refused to compensate for lost cash value of diesel models and provide extended warranties as promised.

The company offered to begin negotiations with GM-DUDS and agreed to reimburse for repair of transmissions, powertrain, diesel components, transportation charges, towing and car rental, incidental expenses and extenuating circumstances expenses. But GM spokesmen have denied that cash reimbursements covering lost value or extended warranties were part of the agreement.

Lemon-On-Wheels has processed about 350 claims over the past 18 months under a program which calls for cases to be reviewed by a GM representative and a member of the consumer group.

Lemon-On-Wheels, which has about 5,000 members, turned down a settlement offer similar to GM's proposal to GM-DUDS.

The D-DOG group has entered into a claims procedure with GM whereby the petitions of 6,668 diesel owners will be reviewed on an individual basis.

The FTC last fall approved a nationwide arbitration program to resolve owner disputes stemming from the V-8 diesel and other gasoline engine and transmission problems. Awards by Better Business Bureau arbitrators are binding on GM, but not on the car owners.

Truck production shows decline in short week

Good Friday-shortened work schedules caused domestic truck production to drop last week despite overtime at seven assembly facilities.

Truck manufacturers targeted production of 50,212 units last week, 23.12 percent below the previous week's 65,315 but 2.27 percent above the year-ago week's 49,097.

Year-to-date, 983,135 trucks have been assembled, 51.04 percent more than the year-ago total of 650,934.

All six of Ford Motor Co.'s assembly facilities scheduled additional daily hours last week with Kansas City and Twin Cities (Minn.) working extra Saturday (April 21) hours.

Chrysler Corp.'s Warren (Mich.) truck plant worked two eight-hour daily shifts last week.

Holiday week cuts output of Canadian plants

Canadian car and truck makers saw production dip due to the holiday-shortened work schedule last week. All plants were closed Good Friday.

The loss of a production day resulted in last week's build estimates falling 19.39 percent for cars and 29.26 percent for trucks.

Canadian auto manufacturers slated production of 18,803 cars last week, down from the previous week's 23,325. The total was 25.93 percent less than the 25,386 assembled in the year-ago week.

To date this year, the manufacturers have built 352,702 autos, 17.21 percent better than the year-ago total of 300,905.

Truck assembly last week was targeted at 12,810, off from 18,109 trucks assembled in the previous week, but 4.43 percent ahead of the year-ago week's 12,267.

So far this year, truck production has climbed to 263,183 units, a 67.88 percent improvement over the 156,766 trucks which were assembled at this time in 1983.

Chrysler Corp. estimated production of 1,500 Dodge Caravans, 1,460 Plymouth Voyagers and 608 Mini Ram Vans at its Windsor (Ont.) plant last week. The build lifts the year-to-date T-115 total to 69,321.

AMC recalls Spirits, Concords, Pacers

WASHINGTON. — American Motors has volunteered to recall and service some 62,400 '79 vehicles to improve control of hydrocarbons and carbon monoxide.

These are 49-state Concords, Spirits and Pacers with 258-CID engines and automatic transmissions.

Year of the turnaround

For many in the automotive business, 1983 was the turnaround year they had been waiting for.

For auto makers, it was a year of renewed financial strength.

For original equipment suppliers, it was a year of rising shipments of components and materials.

For car and truck dealers, it was a year of getting down to the business of selling vehicles.

For many auto workers who were idled during the long downturn of the early '80s, it was a year of returning to their jobs.

Making it all possible were improvements in the U. S. economy. As inflation rates and unemployment dropped, consumers gained confidence, car and truck sales jumped, and company balance sheets turned from red to black.

General Motors and Chrysler Corp. posted record earnings. Ford Motor Co.'s financial showing was called the largest one-year turnaround from a loss position in U. S. corporate history. American Motors in the last three months of 1983 savored its first quarterly profit after 14 straight quarters of loss.

But the economic upturn wasn't the only reason for these glowing achievements. They resulted also from corporate restructuring that increased operating efficiency and reduced costs; from fundamental changes by the auto companies in their relationships with employes, suppliers and dealers; and from scrupulous attention to business basics in the pursuit of product quality and customer satisfaction.

Because the automotive business is cyclical, continued success is no sure thing. But it is believed 1984 will be another good year for the industry, as the economy keeps churning and consumer confidence keeps building.

It's a good feeling that's been a long time coming.

Contents

PRODUCTION 3
U. S. auto makers in 1983 built 6.8 million units, best annual count since 1979. Truck output of 2,375,000 was the best showing in four years by domestic manufacturers.

SALES/REGISTRATIONS 19
Domestic companies in 1983 chalked up their best new-car sales year since 1979, and importers enjoyed their second-best year in the U. S. market.

PRODUCTS/SPECIFICATIONS 41
Car and truck manufacturers in 1983 continued their multi-billion dollar spending programs to bring new and exciting models to market, as performance staged a rousing comeback.

PRICES 57
While price increases were fewer and farther between in 1983 than in "sticker shock" years, U. S. auto makers made the most of rising consumer demand for big cars.

OPTIONS/EQUIPMENT 65
American consumers still love to load up their new cars with power, comfort, convenience and luxury items, and demand for electronic options keeps right on climbing.

MANUFACTURERS 73
Domestic auto manufacturers emerged from the long recession leaner, tougher and more competitive in 1983, a year of sales improvement and return to profitability.

DEALERS 79
For franchised new car and truck dealers in the U. S., 1983 was an upbeat period. For the first time since 1955, there was an increase in the number of domestic dealerships.

SUPPLIERS 87
The recovery in car and truck sales brought welcome business to suppliers of auto manufacturers, many of whom reported increased production during 1983.

DIRECTORIES 93
The automotive business is vast and filled with people on the move at manufacturing and supplier companies, dealerships, advertising agencies and auto-related associations.

ET CETERA 193
Scrappage of cars in the U. S. declined in 1983, the median age of the nation's auto population hit 6.5 years, prices of used cars were strong and new-car inventories were low.

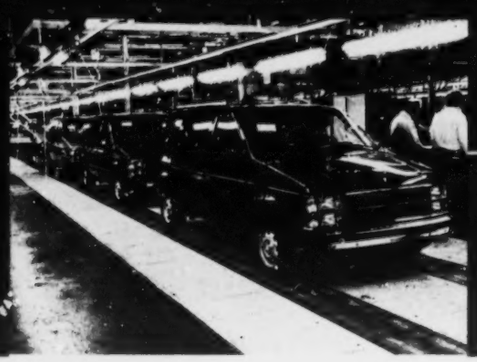
59TH YEAR—NO. 5019

Automotive News (ISSN 0005-1551) is published weekly except semi-weekly fourth week in April at 965 E. Jefferson Ave., Detroit, Michigan 48207. Second-class postage paid at Detroit, Michigan, and at additional mailing offices.

Production



The U. S. auto makers witnessed a recovery during 1983, boosting car production to 6.8 million units. That tally was 36 percent ahead of the nearly 5 million built in 1982 and represented the best year since 8.4 million cars were assembled in 1979.

It was a steady uphill climb throughout the calendar year with the biggest increases posted in the final three months. In the fourth quarter, 1.9 million were built, a whopping 58 percent boost from 1.2 million built in the final quarter of 1982.

While market demand for the new domestic cars at 6.8 million units wasn't a record, the long overdue recovery was strong enough to allow the auto makers to all but eliminate rebates and other incentive programs by year's end.

The demand for full-size cars led auto makers into operating frequent overtime schedules, which caused unwelcome concerns from the United Automobile Workers and even prompted a strike at a Chrysler Corp. stamping plant in November. The demand for small cars was less than anticipated.

For the calendar year 1983, American Motors/Renault produced 200,000 new passenger cars, up from 110,000 in 1982, due to the success of Renault Alliance and Encore. Chrysler Corp. built 900,000 cars in 1983, up from 600,000 the previous year.

At Ford Motor assembly plants, 1.5 million cars were built, up from 1.1 million in 1982. Last year General Motors produced 4 million cars in the U. S., up from 3.1 million the previous year.

Car and truck output in U.S. best since 1979

Newcomer Honda of America Manufacturing Inc. produced 50,000 Accords in its first full-year of production in the states. Honda had built 600 cars in late 1982. Volkswagen of America built 100,000 Rabbits in 1983, up from 84,000 in the previous year.

Domestic truck producers enjoyed their best year in four years. The makers assembled 2,375,000 trucks, 25 percent ahead of the 1.9 million built in 1982 and the highest total for the year since the makers finished 2,975,000 in 1979.

Like car production, truck production showed the biggest gains of the year in the final three months. Fourth quarter production of 680,000 units was up 71 percent compared with 397,000 trucks built in the final quarter of 1982.

Auto and truck makers also had a strong showing in Canada. Car makers reported their best totals in five years. They built 965,000 cars in Canada, up 20 percent from 800,000 completed in 1982.

General Motors was the production leader in Canada in 1983, completing 530,000 cars, compared with 332,000 in 1982. Volvo also posted an increase in output to 10,000 from 6,800 the previous year.

Ford Motor reported Canadian output of 285,000 cars, compared with 283,000 in 1982. American Motors built a steady 30,000 in both years. Chrysler Corp. was the only maker to show a decline in production to 104,000 from 150,000 in 1982 due to the changeover to Voyager and Caravan which are included in truck production.

Canadian truck manufacturers built 550,000 units last year, up from 468,000 in 1982.

Sales/Registrations

After three long years of recession and depression, 1983 was a year of recovery for the auto industry. After a slow start, the year was marked by steady growth in both sales and registrations for the domestic market. Momentum grew throughout the year, and when the final tallies came in the industry recorded the best sales year since 1979.

The domestic makers reported sales of 6.8 million new passenger cars, up 18 percent from the 5,750,000 sold in 1982. It was the best domestic total since 1979 when 8.3 million cars were sold.

The import makers enjoyed their second best year in the U. S. market. Import sales reached 2,380,000, up 7 percent from 2,221,000 in 1982. Record sales for the imports were achieved in 1980. Imports accounted for 25 percent of the 1983 market, down two percentage points from the record 27 percent they claimed in 1982.

The auto makers opened 1983 looking for signs of the upturn everyone was talking about. Rebates and sales incentives, which had become commonplace in the preceeding recessionary years were dropped. Slowly consumers came around. It wasn't until March that confidence levels began increasing and sales followed.

The surprise in the car market was the increasing demand throughout the year for full-size cars and intermediates. The Thunderbird soared. The full-size Oldsmobile, Buick and Chevrolet picked up steam. The demand for Lincolns and Chryslers grew. The GM front-wheel-drive A-cars, which had been launched two years earlier, finally began to pick up steam.

Steady growth in sales and registrations

At the same time, buyer preference shifted away from high mileage small cars and diesel engine packages. While these models showed an increase reflecting the upturn in the economy, it was the bigger cars the customers really wanted. Observers agree that the American consumer became accustomed to gasoline prices of $1.30 per gallon at the pump.

Truck makers also witnessed an end to the doom and gloom years and posted their best year in four years. Retail sales were up in 1983 in all three major market segments, light, medium and heavy trucks. Combined sales totaled 3 million trucks, up 25 percent from 2.4 million in 1982. It was the highest count since 1979 when 3.4 million trucks were retailed, but far short of the all-time high of 4.1 millon in 1978.

The 1983 sales picture can be attributed to the broad-based improvements in the economy that brought unemployment and inflation rates down at the same time and caused consumers to be much more confident about the future. The recovery was not limited to the individual consumer. Business demand for new vehicles was strong in 1983.

In particular the light truck market has been on a roll. The light trucks had been the first to slump after the Iranian revolution and the onset of soaring fuel prices and spot shortages. Sales demand has swelled since the improvement in the fuel efficiency of conventional models and especially since the introduction of the domestic compact models late in 1982.

Performance blitzkrieg in new car lines

In 1983 car and truck manufacturers continued their much-touted multi-billion dollar spending programs to bring new and exciting models to market. As the auto industry moved into the 1984 model year it became evident that performance had made a comeback. Performance became a prime selling feature in dealer showrooms once again.

Several new sporty models were launched last fall. Hailed as the first American-built mid-engine sports car, the all-new wedge-shaped Pontiac Fiero was introduced. For Chrysler there is the sleek new front-wheel-drive Laser with an all-electronic instrument cluster and transverse mounted engine.

For Dodge there is a new performance car, the Daytona. The four-place hatchback is equipped with multi-point fuel injection and the Chrysler water-cooled turbocharger. For American Motors a sporty new subcompact hatchback version of the Alliance, the Encore, made its debut.

A new Mustang SVO, a turbocharged version of the EXP for small car buffs and a new diesel engine are new offerings for Ford Division. New for Mercury in 1984 are the Cougar XR7 and Capri turbocharged models and new diesel-engine options for Topaz and Lynx models.

Among Lincoln's offerings for 1984 are a new upgraded Continental Mark VII and, later in the year, a turbocharged diesel for the Continental and Continental Mark VII.

For 1984 General Motors has added station wagons for the A-cars —Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera and Buick Century. The wagons are available in two-seat and three-seat versions. The return of the Cadillac Eldorado convertible after an eight-year absence highlights the 1984 Cadillac product line.

The performance blitzkrieg shows itself in the specifications chart with more fuel-injected engines, more turbocharged engines, more four-barrel carburetors, higher compression ratios, numerically higher final-drive ratios and increased horsepower and torque ratings.

The carburetor is rapidly becoming obsolete, replaced with fuel-injection systems. And fuel-injection systems are becoming more sophisticated, with simple throttle-body systems.

One or more new high-performance engine options are offered by every auto maker. General Motors and Ford Motor Co. each offer an engine developing in excess of 200 horsepower for 1984. Chrysler and Ford are leading the domestic charge toward turbocharged engines.

As has been the trend since the late '70s, the specification chart shows the continued switch from rear-wheel-drive to front-wheel-drive in all size classes.

At the opening of the 1984 model year the domestic auto makers had 286 models. The total is down from the 296 offered in the 1983 model year. The current 286 consist of 144 for GM, 81 for Ford Motor, 42 for Chrysler Corp., 15 for American Motors-Renault and four for Volkswagen.

At the end of the 1983 model year, the domestic list showed 137 models for GM, 93 for Ford, 43 for Chrysler, 16 for AMC-Renault and seven for Volkswagen for a total of 296.

U. S. 1984 model passenger-car specifications

1984 MODEL DOMESTIC CAR BODY FAMILY DESIGNATIONS

Shown on this page are models that are representative of 1984 model car body family designations of General Motors, Ford Motor Co. and Chrysler Corp.

A complete listing of all models in each body family appears on Page 50.

In the accompanying photos, GM models run from the A-body Buick Century at the top of the first column to the Y-body Chevrolet Corvette at the top of the third column. Ford models run from the Erika Ford EXP (second from top, third column) through the third column. Chrysler models are in the fourth column.

A-body: Buick Century

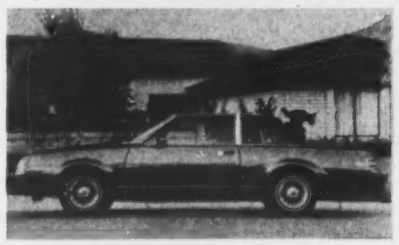
B-body: Pontiac Parisienne

C-body: Oldsmobile Ninety-Eight

D-body: Cadillac Fleetwood Limo

E-body: Oldsmobile Toronado

F-body: Chevrolet Camaro



G-body: Buick Regal

J-body: Pontiac 2000

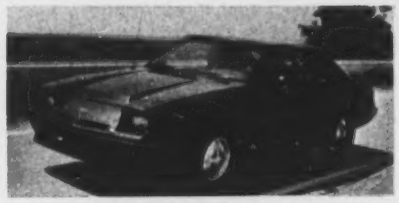
K-body: Cadillac Seville

P-body: Pontiac Fiero

T-body: Chevrolet Chevette

X-body: Buick Skylark

Y-body: Chevrolet Corvette



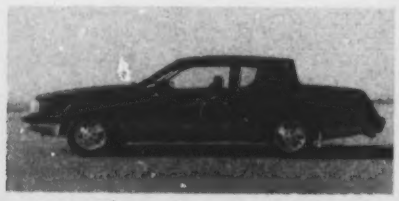
Erika: Ford EXP

Topaz: Mercury Topaz

Fox: Ford Mustang

L-body: Ford LTD

LS-body: Mark VII



S-body: Mercury Cougar

Panther: Ford LTD Crown Victoria

CV-body: Chrysler LeBaron

E-body: Chrysler New Yorker

G-body: Dodge Daytona

K-body: Plymouth Reliant

KC-body: Chrysler Executive Sedan/Limo

L-body: Dodge Omni

M-body: Chrysler Fifth Avenue

S-body: Plymouth Voyager

Domestic car body designations are all in the family

The three largest U. S. auto companies—General Motors, Ford Motor Co. and Chrysler Corp.—expanded the sizes of their families in the 1984 model year.

Car body families, that is. Or, as they are sometimes called, "platforms."

A year before, as the '83 model year got under way, the Big Three had 25 body-family designations. GM had 12, Chrysler seven and Ford six.

As the '84 model year began, they had a total of 28. There were some additions and some deletions. The net result, however, was an addition of one family per company, giving GM 13 platforms, Chrysler eight and Ford seven.

Additions to the '84 families are the GM P-body (Pontiac Fiero), the sporty two-seater that is unique to the GM lineup; the Chrysler G-body (new sporty Dodge Daytona and Chrysler Laser), S-body (the mini van/wagon Plymouth Voyager and Dodge Caravan) and KC-body (Chrysler Executive Sedan/Limo); and Ford Motor Co.'s LS-body (Continental and Continental Mark VII air suspension cars).

There also have been a number of changes and additions of models within various body families at every company.

At GM, the Pontiac Parisienne joined the B-body family that also is comprised of Chevrolet Impala/Caprice Classic, Oldsmobile Delta Eighty-Eight and Buick LeSabre.

At Chrysler, the '83 model J-body designation and cars, Dodge Mirada and Chrysler Cordoba, were dropped in the '84 model year. Also discarded were the Y-body Chrysler Imperial and M-body Chrysler New Yorker.

At Ford Motor Co., the sporty Mercury LN7 coupe was dropped from the Erika platform for '84. Ford Fairmont and Mercury Zephyr were replaced by Ford Tempo and Mercury Topaz models (Topaz platform), and Continental was switched from the L-body designation, and Mark VII from the Panther platform to create a new LS platform.

In all, GM lists 39 different car lines among its 1984 model body family designations, including 10 by Chevrolet, nine by Pontiac, seven each by Oldsmobile and Buick and six by Cadillac.

Ford Motor Co. lists 16 different car lines—seven for Ford Division, six for Mercury and three for Lincoln.

Chrysler Corp. claims 20—five for Plymouth, nine for Dodge and six for Chrysler.

Only the Big Three U. S. auto companies are listed in the accompanying chart of body family designations because American Motors and Volkswagen of America do not use such designations.

Import truck share drops

But Japanese sales hit all-time high

Imported compact trucks have suffered a dramatic decline in market share in the U. S. since the introduction of the domestic vehicles, but sales of Japanese-built trucks still hit an all-time high in 1983 and further gains are expected this year.

In the big-truck market, two Japanese makes became available for the first time in the U. S. and more are expected. Distributors of European models which have been in the domestic market for some time also look for increased sales in 1984.

U. S. dealers retailed a record 420,085 compact Japanese trucks last year, a 34.5 percent gain over the previous high of 312,309 units set in 1982. The total in 1984 will top 500,000 in the opinion of Duane Bowen, marketing vice president, Mazda Motors of America (Central), Inc.

In spite of the compact imports' record sales in the last two years, however, their share of the small-truck market in the U. S. has plunged from almost 100 percent of the total before Ford and General Motors introduced their domestic models to 38.3 percent of the 1,096,621 units retailed in 1983.

Hino and Isuzu medium diesels are Japanese trucks now offered in the U. S. Nissan Diesel Motor Co. Ltd., Japan, is planning to import and sell medium trucks here in 1985, and there are reports that Mitsubishi, another Japanese producer, is taking a close look at the U. S. market.

European mid-range diesels—Mercedes-Benz, Volvo, IVECO/Magirus and the Mack Mid-Liner by Renault — have been on the scene since the 1970s.

Hino trucks are shipped in knocked-down kits to the U. S. and assembly is completed in a Jacksonville (Fla.) plant operated by Hino America Distributors, Inc.

The Isuzu low-cab forward models provide Chevrolet and GMC dealers with a vehicle in a market segment where there has been no GM representation. The trucks, which are imported completely assembled, are sold and serviced as the Chevrolet Tiltmaster and GMC Forward through an initial network of about 250 dealerships.

Nissan Diesel plans to set up a company incorporated in Delaware which will be independent of Nissan's other U. S. operations — Nissan Motor Mfg. Corp., USA, which builds compact pickups in Smyrna, Tenn., and Nissan Motor Corp., USA, which markets the small trucks and cars in the U. S.

The "old man" in the imported big-truck field is Mercedes-Benz, which has been around since the late 1960s. It made little significant progress, however, until the oil crisis of the early 1970s which triggered a steady switch from gasoline power in medium trucks to diesel, the only Mercedes-Benz powerplant.

M-B's 1984 objective is 4,100 deliveries. In 1983, Mercedes-Benz dealers retailed 3,101 units.

Trucks produced by IVECO, a European subsidiary of Fiat of Italy, have been in the U. S. truck market since the late 1970s. Initially, the Netherlands-based company—through its U. S. subsidiary, IVECO Trucks of North America, Inc. — sold only Classes 6 and 7 vehicles carrying the Magirus nameplate.

Sales of the Renault-built Classes 6 and 7 Mack Mid-Liner mid-range diesels rose 17 percent in 1983 to 3,487 units, and similar gains are anticipated for 1984.

A number of new models have been added by distributors of Japanese compact trucks in their bids to boost retail sales and market shares in 1984.

Four new models have been added to the 1984 Nissan line, which has been upgraded in styling, function and performance. They are a long-bed standard truck, a King Cab standard pickup and a pair of long-bed Sports Trucks (4x2 and 4x4). There are now 20 models.

Nissan dealers retailed a record 137,355 trucks during 1983, and an increase of almost 10 percent to 150,000 is projected in 1984.

Toyota dealers sold a record 171,052 small trucks in the U. S. in 1983, highest for any imported truck and topped only by the Chevrolet and Ford compact entries.

The distributor, Toyota Motor Sales, U.S.A., Inc., expects sales in 1984 to rise 17 percent to approximately 200,000 units.

Mazda's 1984 objective is 90,000 sales, up 18 percent over last year's 76,150 units. Sales of Mazda's compact pickup have been growing steadily since 1980, when only 8,775 were retailed.

Isuzu compacts have been in the U. S. market only since 1981, but they, too, have made steady gains. In 1983, dealers sold 26,211 units, up 48 percent over the year-earlier 17,669. With new entries due in 1984, further sales gains are anticipated. New entries in 1984 include the Trooper II sports/utility four-wheel-drive vehicle available in the spring.

Top to bottom: Nissan regular-bed pickup; Dodge Ram 50 pickup; Isuzu P'up pickup.

Top to bottom: Mazda B2000 pickup; Mitsubishi Montero; Toyota long-bed pickup.

Prices

'Modest' price increases on domestic makes

The domestic auto makers entered 1983 looking for signs of an upturn in sales after three long years of recession. The Big Four, led by General Motors Corp., the industry pricing leader, set out on a course to hold the line on retail sticker prices.

Price increases were fewer and far between in 1983 than in previous years when "sticker shock" prevailed. In spring, Chrysler Corp. even lowered the base sticker price on some models, mostly convertibles. Chrysler executives labeled the cut a savings in production efficiencies that they decided to pass on directly to the consumer.

At the start of the 1984 model year, General Motors announced an average price increase of $232, up 2 percent, on passenger cars. Following, Ford Motor Co. reported an increase of $254, up 2.3 percent on the average equipped car.

Both increases were considered rather modest compared to introductory day prices of 1982 and 1983 models. Both General Motors and Ford utilized a new method of adjusting prices of the 1983 models to reflect equipment additions or deletions on the new 1984 models.

Also at the start of 1984 General Motors factored in an item it called "product improvement" through which it gives itself price credit for such things as improved corrosion resistance across the board and all-weather steel-belted radial tires.

Since more equipment is added than deleted as a general rule, a straight sticker-to-sticker comparison would show a greater increase than the one reported by the manufacturer. Example: The sticker on an Oldsmobile Cutlass Ciera Brougham four-door sedan rose $335 for '84. GM said the increase was $142 after equipment adjustments.

American Motors posted its 1984 model prices with an average boost of $232, or 2.5 percent, on Renault Alliance and AMC Eagle cars. Chrysler Corp. set opening day stickers with an increase averaging $191 or 1.9 percent on its full range of 1984 autos. Following the lead of GM and Ford, AMC and Chrysler factored in comparable equipment on the new models.

Chrysler Corp. increased destination charges an average of $28 per car while General Motors and Ford made no change in those fees. Destination charges on Chrysler models range from $308 to $475 on domestic cars. Destination charges are not included in the manufacturers suggested retail price but they are an important part of the cost to the dealer and the price to the customer.

Chrysler Corp. also changed the dealer discount on some cars, improving the dealers' profit potential. From the customers' standpoint the discount revisions mitigate some of the 1984 price hike on Chrysler models because dealers are able to slice a few extra dollars off stickers in writing deals.

While the Big Four auto makers attempted to hold the line on prices, they did take advantage of increasing consumer demand for big cars. While the price increases cited are an average, it was the full-size models that received the biggest bumps at the start of the 1984 model year. The compact and subcompact models received increases less than the average.

AVERAGE NEW-CAR SELLING PRICE

Year	Sales Price Ave. Retail
1969	$3,400
1970	$3,430
1971	$3,730
1972	$3,690
1973	$3,930
1974	$4,390
1975	$4,750
1976	$5,470
1977	$6,120
1978	$6,470
1979	$6,950
1980	$7,340
1981	$8,850
1982	$9,910
1983	$10,725

RETAIL PRICES, U. S. 1984 MODELS

This table shows 1984 domestic prices in effect April 1, 1984, and rounded off to the nearest dollar. All prices are Manufacturer's Suggested Retail Prices. They do not include destination charges, state and local taxes, optional equipment or any other charges that may be passed on to the local buyer. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

Comparison of selected 1984 and 1983 domestic models by market class. Prices are Manufacturer's Suggested Retail Prices. The 1984 prices are those in effect April 1, 1984. The 1983 prices are those in effect at the end of the model year.

No adjustment has been made for year-to-year equipment changes or dealer-discount changes or standard equipment variations among competing models. If there is no entry in the 1983 column, it means that the 1984 model is new or had no direct counterpart in 1983.

Imported car retail prices

Prices in effect March 20, 1984

The following prices are Manufacturer's Suggested Retail Prices. They include ocean freight and import duty. They do not include state or local taxes, optional equipment or special equipment required by state laws. Mercedes-Benz prices include inland shipping fees; others do not. Where East Coast and West Coast prices differ, East Coast prices are used, unless otherwise indicated. Prices are for 1984 models, unless otherwise noted.

PRICES

Price increase averages $163.25

'Popular-priced' class falls to 51.5 percent of import sales

By John K. Teahen Jr.
Managing Editor

Imported-car prices have risen in the past 12 months. The average increases on 1984 models were considerably higher than in the preceding year, but they were not nearly so large as those of earlier years.

The annual AUTOMOTIVE NEWS analysis found an average hike of $163.25 for the best-selling — or "popular-priced" — imports. It amounted to 2.52 percent.

It was nearly three times as much as the jump of $57.39, or 0.91 percent, recorded in the 1983 survey.

But that was an unusual year; the season-to-season hikes had been running much higher than that: $488.09 in the 1982 study, $812.60 in 1981, $187.89 in 1980, $690.02 in 1979 and $435.38 in 1978.

The boost of $163.25 is based on a comparison of 57 models offered by 10 makes. They are models that appear in both the current and the year-ago lineups of those nameplates.

The cutoff point was $8,000. Cars in that price class accounted for 51.5 percent of the imported autos sold in the U. S. last year.

The price limit and the share of market tell their own story of what has happened to auto prices through the years.

AUTOMOTIVE NEWS began its annual analysis of import prices in 1970. At that time, the cutoff point for the popular-priced class was $3,000 and 93.5 per cent of import-car sales were in that group. By 1978, the limit had risen to $5,000 and the market share was still an overpowering 79 percent.

In the last three surveys, the top of the popular-priced class has been $8,000. The market share was 69.8 percent in 1982. It dropped to 60.4 percent last year, and now it stands at 51.5.

Thus, nearly half of the import buyers are willing to pay more than $8,000 for their cars. Obviously, the person who selects a foreign auto is not looking for price alone.

In fairness to the imports, it must be noted that prices of domestic cars have risen as much or more than those of their foreign counterparts. In 1970 and for many years after that, it was possible to finance a new car, imported or domestic, by taking out an auto loan rather than a mortgage loan.

The 57 models in this year's under-$8,000 comparison are offered by Dodge Colt, Plymouth Colt, Honda, Isuzu, Mazda, Mitsubishi, Nissan, Subaru, Toyota and Volkswagen.

Only two of those makes were anywhere near the average increase of $163.25. Subaru was a bit under the norm at $160 and Mazda was a bit over at $170.

Elsewhere, there were wide variations. On the Jetta models, Volkswagen made a diesel the base engine for '84 and priced those models $600 less than '83s with gasoline engines.

Only VW's imported models are included in this analysis, and Jetta is the only line under $8,000. Rabbit is omitted because it is a domestic car. Likewise, the U. S.-built Renault Alliance and Encore are also excluded.

Isuzu I-Mark prices are unchanged from a year ago, and the hike averaged $17 on corresponding '84 and '83 units in the Dodge Colt and Plymouth Colt lines. Mitsubishi Tredia and Cordia models in this segment climbed an average of $80.

Above-average increases in this class were posted by the three-top-selling imports. Toyota was up $242, Nissan was up $357 and Honda was up $368.

The average increase for the top five Japanese lines in this market segment was $245.20. Those lines are Toyota, Nissan, Honda, Mazda and Subaru.

In the medium-priced field — $8,001 to $15,000 — the increase during the past year averaged $544.95, or 5.22 percent. As in the lower-priced group, it was greater than the hike of $374.16, or 3.53 percent in last year's study.

But is was less than the average boost of $898.79 in 1982 and $1,067.34 in 1981.

The comparison in this class embraced 54 models offered by 12 makes. Included are the Toyota Camry, Celica and Cressida; the Nissan Stanza, 200-SX and Maxima; the Honda Prelude and most Accords, and the Mazda 626 and RX-7.

The VW convertible, Scirocco and Quantum fall in this range, as do the Audi 4000 and Coupe, the Mitsubishi Starion and topline Tredia and Cordia, the Volvo DL, the Saab 900 and 900-S, most Peugeot 505s, the Renault Fuego and Sportwagon and the Isuzu Impulse.

There are other imports in this price class, but they are newcomers so there is no basis for year-to-year price comparison.

Four makers boosted their medium-priced models more than the $544.95 average for the class. They were Mazda, up $696; Volkswagen, $704; Volvo, $714, and Audi, $1,735. Audi added a good bit of standard equipment.

Price hikes below the average were posted by eight makes: Peugeot, $53; Mitsubishi, $175; Honda, $277; Saab, $345; Toyota, $413; Renault, $466; Nissan, $499, and Isuzu, $500.

The medium-priced segment accounted for 36.2 percent of the imported cars sold in the U. S. last year, a major jump from 30.1 percent in 1982 and 24.7 percent in 1981.

The more expensive the car, the bigger the year-to-year price increase. That seems to be a lesson the imports have learned from their domestic rivals.

As noted, the lower-priced imports rose $163.25 in the past year and the mediums climbed $544.95. In the luxury class, the average was $1,049.08, or 4.24 percent.

The luxury class ($15,000 and up) accounted for 12.3 percent of last year's import sales, up from 9.5 percent in 1982 and 5.5 percent in 1981.

This year's comparison included 36 models from 11 makers. All Mercedes-Benz, BMW, Porsche, Jaguar and Alfa Romeo offerings are in this segment, along with the Audi 5000 and Quattro, the Volvo GL wagon, Turbo and 760-GLE, the Peugeot 505-STI and 604, the Nissan 300-ZX, the Toyota Supra and the Saab 900 Turbo.

Four makes had increased higher than the $1,049.08 average. They were Audi, up $1,063; BMW, $1,086; Mercedes-Benz, $1,332, and Porsche, $1,892. The Audi average requires a word of explanation: The 5000 sedan rose $2,125 and the Quattro coupe was unchanged.

Price hikes below the class average were turned in by Toyota, up $326; Saab, $460; Jaguar, $667; Alfa Romeo, $755; Peugeot, $845; Volvo, $904, and Nissan, $933.

In each of the three classes — popular-priced, medium-priced and luxury — the AUTOMOTIVE NEWS analysis was based on comparable models, those that appear in the current and year-ago lineups of a particular make. In a few cases, models that occupy the same relative position in a maker's lineup were used.

Prices considered were Manufacturer's Suggested Retail Prices. Where prices differ by geographic areas, East Coast prices were used.

Data on changes were based on an arithmetical comparison of prices in effect on March 1 or this year with those in effect a year ago. For models introduced later in the '83 model year, introductory prices were used. There was no sales-weighting, and no adjustment was made for year-to-year equipment changes.

Imported-car retail prices

Continued from Page 62

893; E 5-door hatchback (4x2 Twinstick), $5,539; DL 5-door hatchback (4x2 Twinstick), $6,029. **(Power disk brakes** standard on all models. **Automatic transmission** is $314, not available on E 3-door hatchback.)

PLYMOUTH COLT VISTA—Van Wagon, (4x2 Twinstick), $8,115. **(Power disk brakes** are standard. **Automatic transmission** is $388.)

PLYMOUTH CONQUEST—2-door Liftback, $12,149. **(Power disk brakes, power steering, radio** are standard. **Automatic transmission** is $524.)

PORSCHE—944—Coupe (5-speed), $21,440; coupe (automatic), $21,940. **911 Carrera**—Coupe, $31,950; Targa Coupe, $33,450; Cabriolet, $36,450. **928-S**—Coupe (automatic), $44,000. **(Power disk brakes and power steering** standard on 944 and 928-S. **Air conditioning** standard on all models.) (Prices do not include dealer prep fee.)

RENAULT—Alliance—2-door sedan (4-speed), $5,959; L 2-door sedan (4-speed), $6,465; L 4-door sedan (4-speed), $6,715; DL 2-door sedan (5-speed), $7,065; DL 4-door sedan (5-speed), $7,365; Limited 4-door sedan (5-speed), $8,027. **Encore**—3-door Liftback (4-speed), $5,755; S 3-door Liftback (4-speed), $6,365; S 5-door Liftback (4-speed), $6,515; LS 3-door Liftback (5-speed), $6,995; LS 5-door Liftback (5-speed), $7,195; GS 3-door Liftback (5-speed), $7,547. (All Alliance and Encore models are built in the U.S.) **Sportwagon**—4-door wagon (5-speed), $9,595; Touring Edition 4-door wagon (5-speed), $11,350. **Fuego**—Coupe (5-speed, fuel injection), $8,995; Turbo coupe (5-speed), $11,395. **(Power disk brakes** standard on all models. **Power steering** standard on both Sportwagon and both Fuego. **Radio** standard on all models except base Alliance and base Encore. **Air conditioning** standard on both Sportwagon and Fuego Turbo. **Automatic transmission** is $435 on base Alliance, Alliance L, base Encore and Encore S; $338 on Alliance DL and Limited and Encore LS and GS; $420 on Sportwagon and base Fuego.) (Prices include dealer prep fee.)

ROLLS ROYCE—Silver Spirit—4-door sedan, $98,500. **Silver Spur**—4-door sedan, $109,000. **Camargue**—2-door sedan, $150,800. **Corniche**—Convertible, $156,000. **(Automatic transmission, power steering, power disk brakes, radio, air conditioning** standard on all models.) (Prices do not include dealer prep fee.)

SAAB—900 Series—3-door hatchback, $11,100; 4-door sedan, $11,420. **900-S**—3-door hatchback, $13,850; 4-door sedan, $14,310. **900 Turbo**—3-door hatchback, $16,940; 4-door sedan, $17,400. **(Power disk brakes and power steering** standard on all models. **Radio** standard on 900 Turbo. **Air conditioning** standard on 900-S and 900 Turbo. **Automatic transmission** is $390 on all models, 5-speed manual is standard.) (Prices do not include dealer prep fee of $60.)

SUBARU—2-Door Hatchbacks — Standard hatchback (4-speed), $5,118; DL hatchback (5-speed), $6,123; GL hatchback (5-speed), $6,854; GL hatchback (automatic), $7,164; GL hatchback (4-wheel drive), $7,403. **4-Door Sedans**—DL sedan (5-speed), $6,860; GL sedan (5-speed), $7,259; GL sedan (automatic), $7,569; GL sedan (4-wheel drive, automatic), $8,680. **4-Door Wagons**—DL wagon (5-speed), $6,899; GL wagon (5-speed), $7,498; GL wagon (automatic), $7,808; DL wagon (4-wheel drive), $7,448; GL wagon (4-wheel drive), $8,047; GL wagon (4-wheel drive, automatic), $8,357; GL Turbo wagon (4-wheel drive, automatic), $10,303. **2-Door Hardtops**—DL hardtop (5-speed), $6,776; GL hardtop (5-speed), $7,452; GL hardtop (automatic), $7,762; GL Turbo hardtop (4-wheel drive, automatic), $11,063. **BRAT (4-wheel drive)**—GL, $7,723; GL (automatic), $7,723; GL Turbo (automatic), $10,108. **(Power disk brakes, radio** standard on all models. **Power steering** standard on GL sedan, GL wagon, GL hardtop and all BRAT models. **Air conditioning** standard on Turbo wagon, Turbo hardtop and turbo BRAT.) (Prices include dealer prep fee.)

TOYOTA—Starlet—3-door Liftback (4-speed), $5,898; 3-door Liftback (5-speed), $5,948. **Tercel**—Standard 3-door Liftback (4-speed), $5,098; Deluxe 3-door Liftback (5-speed), $5,998; Deluxe 3-door Liftback (automatic), $6,298; SR-5 3-door Liftback (5-speed), $6,818; Deluxe 5-door Liftback (5-speed), $6,183; Deluxe 5-door Liftback (automatic), $6,488; Deluxe 5-door wagon (5-speed), $6,588; Deluxe 5-door wagon (automatic), $6,888; Deluxe 4x4 wagon (6-speed), $7,458; SR-5 4x4 wagon (6-speed), $8,278. **Corolla**—Deluxe 4-door sedan (5-speed), $6,498; Deluxe 4-door sedan (automatic), $6,848; LE 4-door sedan (5-speed), $7,198; LE 4-door sedan (automatic), $7,548; Deluxe 5-door Liftback (5-speed), $6,748; Deluxe 5-door Liftback (automatic), $7,098; Deluxe diesel 4-door sedan (automatic), $7,398; Deluxe diesel 5-door Liftback (5-speed), $7,298. **Corolla Sport**—SR-5 hardtop coupe (5-speed), $7,598; SR-5 hardtop coupe (automatic), $8,098; SR-5 Liftback sport coupe (5-speed), $7,778. **Camry**—Deluxe 4-door sedan (5-speed), $8,148; Deluxe 4-door sedan (automatic), $8,848; LE 4-door sedan (automatic), $10,098; Deluxe 5-door Liftback (automatic), $9,098; LE 5-door Liftback (automatic), $10,448; Deluxe turbodiesel 4-door sedan (5-speed), $9,248. **Celica**—ST sport coupe (5-speed), $7,099; ST sport coupe (automatic), $8,139; GT sport coupe (5-speed), $8,799; GT sport coupe (automatic), $9,239; GT-S sport coupe (5-speed), $10,589; GT 3-door Liftback (5-speed), $9,149; GT 3-door Liftback (automatic), $9,589; GT-S 3-door Liftback (5-speed), $10,919. **Supra**—L-Type coupe (automatic), $15,074; Supra coupe (5-speed), $15,724; Supra coupe (automatic), $16,324. **Cressida**—4-door sedan (5-speed), $13,795; 4-door sedan (automatic), $14,195; 4-door wagon (automatic), $14,355. **Van Wagon**—Deluxe Van Wagon (5-speed), $8,998; Deluxe Van Wagon (automatic), $9,498; LE Van Wagon (5-speed), $10,498; LE Van Wagon (automatic), $10,998. **Land Cruiser**—4-door wagon (4-speed), $13,768. **(Power disk brakes** standard on all models. **Power steering** standard on Camry LE, Celica GT-S, all Supra, all Cressida, LE Van Wagons and Land Cruiser. **Radio** standard on Tercel SR-5, Corolla LE, all Corolla Sport, Camry LE, Celica GT and GT-S, all Supra, all Cressida, LE Van Wagons and Land Cruiser. **Air conditioning** standard on all Supra and all Cressida.) (Prices include dealer prep fee.)

TOYOTA PICKUP TRUCKS—Pickup Trucks (2-wheel drive)—Standard short bed (4-speed), $5,998; Standard long bed (5-speed), $6,298; Standard long bed (automatic), $6,708; Deluxe long bed (5-speed), $6,998; Deluxe long bed (automatic), $7,408; Deluxe Xtra Cab (5-speed), $7,238; Deluxe Xtra Cab (automatic), $7,648; SR-5 short bed (5-speed), $7,998; SR-5 long bed (5-speed), $8,168; SR-5 Xtra Cab (5-speed), $8,278; SR-5 Xtra Cab (automatic), $8,688; Deluxe long bed (diesel engine, 5-speed), $7,598; three-quarter ton (5-speed), $6,998; commercial cab/chassis (4-speed), $6,578; Camper cab/chassis (4-speed), $6,848. **Pickup Trucks (4-wheel drive)**—Standard short bed (5-speed), $8,298; Deluxe long bed (5-speed), $8,958; Deluxe Xtra Cab (5-speed), $9,198; SR-5 short bed (5-speed), $9,828; SR-5 long bed (5-speed), $9,998; SR-5 Xtra Cab (5-speed), $10,148; Deluxe long bed (diesel engine, 5-speed), $9,558. **(Power disk brakes** standard on all models. **Power steering** standard on SR-5 4-wheel-drive models. **Radio** standard on all SR-5 models.) (Prices include dealer prep fee.)

TVR — Coupe, $27,862; convertible, $27,862. **(Automatic transmission, power steering, power disk brakes, radio, air conditioning** standard on both models.) (Prices do not include dealer prep fee of $200.)

VOLKSWAGEN—(In the Volkswagen listing, FI means Fuel Injection)—**Rabbit L**—Sparmeister 2-door hatchback (diesel, 4-speed), $6,390; 2-door hatchback (carburetor, 4-speed), $6,530; 2-door hatchback (diesel, 5-speed), $6,600; 2-door hatchback (5-speed, FI), $6,865; 2-door hatchback (automatic, FI), $7,065; Sparmeister 4-door hatchback (diesel, 4-speed), $6,800; 4-door hatchback (carburetor, 4-speed), $6,740; 4-door hatchback (diesel, 5-speed), $6,810; 4-door hatchback (FI, 5-speed), $7,075; 4-door hatchback (automatic, FI), $7,275. **Rabbit GL**—4-door hatchback (carburetor, 4-speed), $7,130; 4-door hatchback (5-speed, FI), $7,465; 4-door hatchback (automatic, FI), $7,665. **Rabbit GTI**—2-door hatchback (5-speed, FI), $8,350. **Rabbit Convertible**—Convertible (5-speed), $10,980; convertible (automatic), $11,405. (All Rabbit models except convertible are built in the U. S.) **Jetta**—2-door sedan (diesel, 4-speed, California only), $7,390; 2-door sedan (diesel, 5-speed), $7,390; 2-door sedan (5-speed, FI), $7,630; 2-door sedan (automatic, FI), $8,055; 4-door sedan (diesel, 4-speed, California only), $7,610; 4-door sedan (diesel, 5-speed), $7,610; 4-door sedan (5-speed, FI), $7,850; 4-door sedan (automatic, FI), $8,275. **Jetta GL**—4-door sedan (5-speed, FI), $8,210; 4-door sedan (automatic, FI), $8,635; 4-door sedan (turbodiesel, 5-speed), $9,210. **Jetta GLI**—4-door sedan (5-speed, FI), $8,690. **Scirocco**—Coupe (5-speed), $10,870; coupe (automatic), $11,295. **Quantum GLS**—4-door sedan (5-speed, FI), $12,980; 4-door sedan (automatic, FI), $13,405; 4-door wagon (5-speed, FI), $13,780; 4-door wagon (automatic, FI), $14,205. **Quantum GL**—4-door sedan (turbodiesel, 5-speed), $13,530; 4-door sedan (turbodiesel, automatic), $14,045; 4-door wagon (turbodiesel, 5-speed), $14,330; 4-door wagon (turbodiesel, automatic), $14,845. **Vanagon**—7-seater (4-speed), $11,675; 7-seater (automatic), $12,100; 9-seater (4-speed), $11,730; 9-seater (automatic), $12,155. **Vanagon GL**—7-seater (4-speed), $12,175; 7-seater (automatic), $12,600. **Vanagon Camper**—4-speed, $15,800; automatic, $16,225. **Power disk brakes** standard on all models. **Power steering** and **air conditioning** standard on Quantum. Radio standard on Rabbit convertible, Scirocco and Quantum.) (Prices do not include dealer prep fee.)

VOLVO—GL Series — 2-door sedan (overdrive), $11,330; 2-door sedan (automatic), $11,720; 4-door sedan (overdrive), $11,960; 4-door sedan (automatic), $12,350; 4-door wagon (overdrive), $12,385; 4-door wagon (automatic), $12,775. **GL Series**—4-door sedan (overdrive), $14,995; 4-door sedan (automatic), $15,385; 4-door wagon (overdrive), $15,550; 4-door wagon (automatic), $15,940. **Diesel** (not available in California)—4-door sedan (overdrive), $15,480; 4-door sedan (automatic), $15,770; 4-door wagon (overdrive), $16,035; 4-door wagon (automatic), $16,325. **Turbo**—2-door sedan (overdrive) $16,540; 2-door sedan (automatic), $16,930; 4-door sedan (overdrive), $16,850; 4-door sedan (automatic), $17,240; 4-door wagon (overdrive), $17,405; 4-door wagon (automatic), $17,795. **760-GLE**—4-door sedan (automatic), $21,225. **760-GLE Turbo Diesel** (not available in California)—4-door sedan (overdrive), $22,035; 4-door sedan (automatic), $22,470. **(Power disk brakes, power steering** standard on all models. **Air conditioning** standard on Diesel models, Turbo models and all 760-GLE models.)

Options/Equipment

The American consumer still loves to load up new cars with power, comfort and luxury items. Even with the trend toward smaller vehicles during the past decade, the demand for loaded interiors continues to grow. The 1983 model year was no exception. Along with the recovery in sales came a renewed demand for full-size luxury models, performance engines and new electronic options.

Power steering and brakes are pretty nearly standard equipment among domestic car models. Where they are optional, their popularity continues to grow. Other power equipment items like power side-windows and rear window defrosters, sometimes called defoggers, also continued gaining popularity on 1983 models.

The industry installed power steering in 90 percent of its domestic models. Power side-windows, which tend to fluctuate more or less with sales of more expensive and larger cars, increased to a 39 percent penetration from 30 percent penetration in the 1982 model year.

Rear window defrosters showed a 60 percent penetration, up from 55 percent in 1982. This option has been steadily growing in popularity over the years. It is still standard on only a few high-priced luxury lines.

Electronic componentry is one of the fastest-growing optional equipment areas. Digital clocks and electronic instrument panels, for example, have gained a lot of new ground in the options listing. Digital clocks in one form or another ended up on 43 percent of domestically produced cars in 1983, up from 34 percent the previous year.

Electronic components gain ground

Digital clocks are offered in various combinations by themselves or with various types of radios. General Motors, for example, offers digital clocks with AM pushbutton radios; AM/FM stereo electronically tuned radios (ETR), excluding seek/scan functions; and AM/FM stereo cassette with graphic equalizer ETR, excluding seek/scan. The use of AM-FM stereo radios reached 41 percent of domestic cars in 1983.

Electronic instrument panels went on 3 percent of domestic models last year, up from nearly 2 percent in 1982. They are still limited in availability, but have become standard on some models, like Pontiac 6000-STE.

Meanwhile, tilt and tilt/telescopic steering wheels continue to gain because of their convenience in smaller models. Tilt wheel was carried on 50 percent of industry production, up from 46 percent in 1982. Tilt/telescopic, confined to GM cars, was carried on 5 percent of production, up from 4.5 percent. Its an item GM still reserves for its high-priced lines, like Corvette, where it's standard.

The talking car made its debut at Chrysler in 1983. The talking car or EVA, Electronic Vehicle Alert, gives 11 messages concerning mechanical and safety functions. The voice, which is male, also says please and thank-you and cuts into the radio when it needs to speak.

For 1984, the EVA is part of the electronic instrument panel on the new Laser. Standard equipment includes a 22-feature electronic monitor, electronic navigator, electronically tuned radio with digital clock and a computer-controlled fuel-injected powerplant.

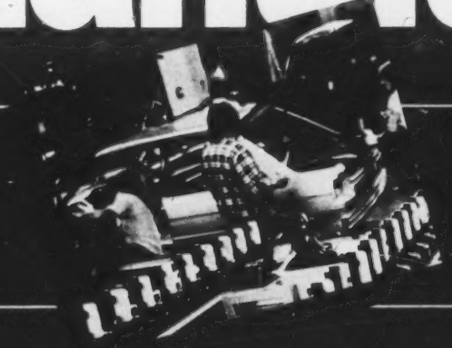
Manufacturers



Domestic auto manufacturers have emerged from the long recession leaner, tougher and more competitive. Aggressive new-product programs were launched in 1983, a year marked by a dramatic improvement in sales and a return to profitability.

General Motors and Chrysler Corp. posted record earnings for the calendar year. Chrysler repaid $1.2 billion in loans guaranteed by the federal government — an action that was taken seven years early and will go down in business history books as a financial miracle.

GM in 1983 earned a record income of $3.7 billion on record sales sales of $74.6 billion. GM attributed its success to an improving economy, higher production volumes and the continuing spirit of cooperation between the company and its employes. GM's record allowed the company to pay about $640 to each eligible employe through a new profit sharing program.

Chrysler earned a record $927.4 million in 1983 compared with an operating loss of $68 million in 1982. Chrysler's financial turnaround became a reality after the company completely restructured its operations. Importantly, Chrysler kept its new-product programs on track during its struggle. At the start of the 1984 model year its new lineup included two new sports cars and the industry's first garageable mini-van/wagon.

Also on the upswing for 1983, Ford Motor Co. reported net income of $1,867 million compared with a loss of $658 million in 1982. Ford called the report the largest one-year turnaround from a loss position in U. S. corporate history.

A dramatic return to profitability

The turnaround was made possible by higher sales, a strong reception of Ford new cars and trucks, and the cumulative effect of several years of productivity improvements and restructuring actions.

Ford profits for 1983 substantially exceeded those earned in 1979—the last year of profitability before the recession—despite the fact that unit sales in 1983 were almost one million units lower than in 1979.

Outside the U. S., Ford earned a profit of $351 million in 1983. Its position in overseas markets remained strong. For the 19th consecutive year, Ford sold more vehicles overseas than any other U. S.-based manufacturer. In Europe, Ford's 12.6 percent car-market share was a record for the second consecutive year.

American Motors reported a net loss of $146.7 million last year compared with a net loss of $153.5 million the previous year. AMC ended 1983 on a positive note, however, reporting a profit of $7.4 million in the fourth quarter of the year. It was the company's first quarterly profit after 14 consecutive quarters of losses.

AMC attributed its improvement to the success of its Renault cars and new Jeep vehicles. It was a record year for the Renault nameplate in the U. S. — 179,419 sales compared with 91,981 in 1959, the prior record year.

In 1983 American Motors entered a joint agreement to build Jeep vehicles in the People's Republic of China. The aggressive effort gives AMC entry into the vast auto market in China and positions the company to expand in Asia.

1983-1982 FINANCIAL RESULTS

	Net Sales 1983	Net Sales 1982	Net Profit (Loss) 1983	Net Profit (Loss) 1982	Profit (Loss) 1983	Profit (Loss) 1982
American Motors	$ 3,271,720,000*	$ 2,392,957,000*	($ 146,730,000)	($153,474,000)	($ 2.11)	($2.85)*
Chrysler Corp.	$ 13,240,400,000	$ 10,044,900,000*	$ 700,900,000	$170,600,000	$ 5.79	$1.84
Ford Motor Co.	$ 44,454,600,000	$ 37,067,200,000	$1,866,900,000	($657,800,000)	$10.29	($3.64)*
General Motors	$ 74,581,600,000	$ 60,025,600,000	$3,730,200,000	$962,700,000	$11.84	$3.09
TOTAL	$135,548,320,000	$109,530,657,000	$6,151,270,000	($321,526,000)		

*Restated. AMC sales have been restated to reflect the 1983 sale of AM General. If AM General sales were included, AMC's 1983 sales would be $3,428,000,000; 1982 sales, $2,878,000,000. Chrysler sales have been restated to reflect the 1982 sale of Chrysler Defense. If Chrysler Defense sales were included, Chrysler's 1982 sales total would be $10,057,000,000. Ford's 1982 per-share loss was restated to reflect the three-for-two stock split that occurred in 1983. Actual per-share loss for 1982 was $5.46.

GM income and sales soar

'Turnaround year we've been waiting for'

General Motors earned a record net income of $3.7 billion on record sales of $74.6 billion during 1983. Chairman Roger B. Smith and president F. James McDonald said the earnings provided a profit-sharing fund of $322 million to be distributed to some 531,000 U.S. employes—a payout unprecedented in American business history.

The net income and sales records established in 1983 surpass the previous record for net income of $3.5 billion set in 1978, and the prior sales high of $66.3 billion in 1979. Earnings per share of $11.84 were not a record. The record of $12.24 per share was set in 1978 when fewer shares were outstanding.

Net income for the fourth quarter of 1983 totaled $1,297 million, which was a record for any quarter, surpassing GM's previous record of $1,257 million earned in the first quarter of 1979.

Smith and McDonald noted that inflation was reflected in the gross dollars of sales and earnings and made the year seem even better than it was. "Inflation-adjusted data," they said, "show we have a long way to go to achieve meaningful records. Still, 1983 was a very good year for General Motors."

The two executives pointed out that GM's new profit-sharing plans would pay about $640 to each eligible employe who worked a normal schedule throughout 1983. Overtime could increase that amount for the hourly employe to about $700, and perhaps more. In reflecting on the inaugural payout, they stated, "No other company anywhere in the world, at any time in the past, has ever shared such a large amount of profit with its employes."

The 1983 earnings represented an increase of $2,767 million, or $8.75 per share, over 1982 results. The improving economy and higher production volumes contributed to this success. Much of the increase, however, is directly attributable to the continuing spirit of cooperation between GM and its employes which produced outstanding improvements in product quality and operating performance throughout the year, Smith and McDonald said. Earnings also benefited from increased income from General Motors Acceptance Corp.

Worldwide factory sales of cars and trucks to GM dealers increased 24 percent from the prior year, totaling 7.8 million units during 1983. Dollar sales also increased 24 percent compared with 1982, and GM's profit margin improved from 1.6 percent of sales in 1982 to 5.0 percent in 1983.

Smith and McDonald described 1983 as "the turnaround year we have been working for," and said the corporation made advances in a number of areas during its 75th anniversary year. They cited actions which streamlined GM's operations; the announcement of Project Saturn to develop a new process for building small cars; progress in forming a joint venture in the U.S. with Toyota; the start-up of two new U.S. assembly plants designed to produce a new series of luxury cars; and advancements in equal employment opportunity.

They were confident that GM's aggressive product programs, combined with continuing efforts to maintain superior financial strength and achieve international cost competitiveness, "will provide GM with the appropriate resources and flexibility to strengthen its competitive position for the longer term."

The two executives expressed concern about economic conditions in a number of countries vital to GM's overall success, but pointed to the corporation's record retail sales performance overseas in 1983 as "a demonstration of our ability to compete outside North America in today's economic climate."

Recognizing that "continued success is no certainty," Smith and McDonald expressed confidence that 1984 can be another good year for GM. They cited the highest level of consumer confidence in more than a decade, plus their expectation that the U.S. economy should continue to expand for five years or more, "given a national resolve to avoid a significant renewal of inflation and to ease worries about interest rates."

They reiterated their anticipation that the industry could sell 14 million new cars and trucks in the U.S. during 1984, and that worldwide car and truck sales should reach 60 million units a year some time in the 1990s.

Other highlights of GM's 1983 financial report include:

• Cash and marketable securities rose at year-end to $6,217 million, an increase of $3,091 million over 1982.

• Working capital at year-end stood at $5,891 million, an increase of $4,2.3 million above the December 1982 level of $1,658 million.

• Total debt decreased from $5,634 million at year-end 1982 to $4,392 million at year-end 1983. Over the same period, the ratio of total debt to capital (debt plus stockholders' equity) decreased from 23.6 percent to 17.5 percent.

• The income tax provision of $2,224 million reflects GM's increased profitability during 1983.

• Exchange and translation activity amounted to a loss of $52 million in 1983, compared with a gain of $348 million in 1982. This was primarily due to the required adoption of accounting standard No. 52 covering the translation of foreign currency financial statements.

• Capital spending during 1983 totaled $4,007 million, compared with $6,212 million in 1982. It is anticipated that capital spending will be approximately $6 billion in 1984.

• $180 million was provided for the GM bonus plan in 1983, following three consecutive years in which earnings were not sufficient to generate funds for bonuses.

• Equity in earnings of nonconsolidated subsidiaries and associates (primarily General Motors Acceptance Corp. and Motors Insurance Corp.) totaled $983 million, an increase of 43 percent above the 1982 level of $688 million. GM's 1983 annual report was mailed to stockholders in March.

Following is a comparison of GM's 1983 and 1982 financial reports:

(Dollars in millions except per share and hourly amounts.)

Strong comeback for Ford

'A leaner and more competitive company'

Ford Motor Co. net income in 1983 totaled $1,867 million compared with a loss of $658 million in 1982.

Commenting on the results, chairman Philip Caldwell said, "Ford's 1983 profit improvement of $2.5 billion represents the largest one-year turnaround from a loss position in U.S. corporate history. This achievement was made possible by a combination of higher industry sales, a strong reception of our new cars and trucks, and the cumulative effect of several years of productivity improvements and restructuring actions."

Ford's balance sheet was strengthened substantially during 1983. Stockholders' equity increased $1.5 billion to $7.5 billion at December 31, and worldwide debt was reduced by nearly $1 billion to $3.7 billion. Cash balances increased by $1.6 billion to $3.2 billion at December 31.

"Ford has emerged from one of the most challenging and difficult periods in its history," Caldwell said, "as a leaner and more competitive company. We have made major reductions in our cost structure. Profits for 1983 substantially exceeded those earned in 1979—the last year of profitability before the recession—despite the fact that our unit sales in 1983 were almost one million units lower than in 1979.

Worldwide dollar sales of Ford products totaled $44.5 billion in 1983, up 20 percent from 1982. Factory sales of Ford cars, trucks and tractors were 5,002,000 units, up 660,000 units or 15 percent from the prior year.

On a geographic basis, net income in the U.S. totaled $1,516 million in 1983, compared with a loss of $1,118 million in 1982. The improvement reflected higher car and truck industry volumes, continued achievement of operating efficiencies, lower marketing costs, a more profitable sales mix, and higher car and truck market shares. Material and labor cost increases in excess of vehicle price increases were partial offsets. Dollar sales in the U.S. were $28.4 billion in 1983; factory sales were 2,694,000 units, up 28 percent from 1982.

Ford's share of the U.S. car market was 17.2 percent in 1983, up 0.3 of a point from a year earlier. Ford's car share increased throughout 1983 to 18 percent in the fourth quarter, the highest quarterly share in three years, reflecting good sales results from the steady stream of all-new cars introduced during the year—Ford Thunderbird and Mercury Cougar, Ford Tempo and Mercury Topaz, and the new continental Mark VII.

In trucks, Ford was the top-selling name in the U.S. in 1983 with a market share of 31.3 percent, up 0.7 of a point from 1982. The new Bronco II, introduced in March 1983, provided a strong entry in the fast-growing compact utility vehicle market segment. Ranger, in its first full year of production, was the compact truck sales leader. In addition, the light conventional F-Series truck was the best-selling nameplate in the U.S.—car or truck—for the seventh consecutive year, and the Ford Econoline continued to be the best-selling van.

Outside the U.S., Ford earned a profit of $351 million in 1983. This was $109 million lower than in 1982, reflecting adverse foreign-exchange effects, principally in Europe and Latin America, higher costs associated with new-model introductions, and higher marketing costs in Europe. The decline also reflected one-time deactivation costs associated with the planned closing of noncompetitive

Chrysler record earnings

'Year of dramatic improvement'

Chrysler Corp. posted record operating earnings of $927.4 million in 1983 compared to an operating loss of $68 million in 1982.

Lee A. Iacocca, board chairman, said, "Chrysler made major gains in 1983. It was a year of dramatic improvement with revenues up 33 percent, profits up 312 percent, factory unit sales up 26 percent and hourly employment up 26 percent. Chrysler won its long battle for independence in 1983. With more cash on hand, we were able to repay the holders of our government-backed notes and put our financial house in order."

Chrysler settled with its lenders, issuing 35 million shares of new stock in the process. The company repurchased warrants from the government, paid the dividend arrearage on perferred stock and paid off a Delaware state loan.

"Most important," Iacocca said, "we kept our product plans on track during the hard times and, in the last quarter of 1983, we executed the most complex product launch in the company's history. We introduced the Chrysler Laser and Dodge Daytona sports cars and the Plymouth Voyager and Dodge Caravan mini wagons/vans.

In 1983 net income was $700.9 million, 312 percent better than in 1982. This produced earnings of $5.79 per common share in 1983 compared with $1.84 per common share in 1982. Chrysler's 1983 earnings were 66 percent better than the previous record profit, set in 1976, when Chrysler was a larger company.

The chairman said, "The operational restructuring undertaken over the last few years produced results extraordinary for any company, especially an automobile company. Our financial position improved dramatically during the year. At the end of 1982, total debt was 69.8 percent of the total of debt plus equity. At the end of 1983 it had fallen to 52.7 percent. Further improvement is anticipated."

Chrysler expects the industry to sell 10.5 million cars and 3.7 million trucks in the United States in 1984, for a 15 percent increase in U.S. car sales and an 18 percent increase in truck sales over 1983.

In this larger market, Chrysler is planning to sell more than a million cars, or 10.6 percent of the domestic market. With sales of the Voyager and Caravan, which are classified as trucks, Chrysler expects to sell more than 500,000 trucks, boosting its share of the truck market from 9 to 14 percent.

The 1983 results included four dramatic financial actions:

- The company repaid the $1.2 billion in loans guaranteed by the federal government. This action was taken seven years early, saving $302 million in interest and government fees. It strengthened Chrysler's balance sheet and helped facilitate its access to traditional credit markets.
- Chrysler cleaned its balance sheet by reclassifying $1.1 billion of preferred stock into common stock, and by exchanging common stock for lender warrants. Chrysler also accelerated the expiration date on 5 million warrants held by the public. These actions increased the number of shares outstanding, from 79,475,287 to 121,811,855. The market value of Chrysler stock rose during the year, with the aggregate market value of outstanding common stock increasing from $1,410.7 million to $3,365.1 million.
- Chrysler placed the winning bid of $311 million for the 14.4 million Chrysler warrants held by the U.S. government. Those warrants have been retired, and with them the uncertainty about their potential dilution and stock-price effect.
- In December, Chrysler resumed preferred dividend payments, and paid all arrearages on the 10 million shares of preferred stock held by the public.

Iacocca said, "The results of 1983 and prospects for 1984 underscore the success of our strategy for rebuilding Chrysler's profitability. During our turnaround we cut the company's size, closing some 20 plants and modernizing remaining facilities, trimming white collar personnel from over 40,000 in 1978 to 21,000 in 1983, and reducing our breakeven point from 2.4 million in 1979 to 1.1 million units in 1983. We cut fixed costs from $4.7 billion in 1979 to $3.54 billion in 1983.

"But we didn't trim budgets for future products. When the long-overdue upturn arrived, Chrysler was ready with a full line of high-value vehicles."

In 1983 Iacocca, after considering retiring, made a decision to stay with Chrysler and accepted a stock grant and stock option offer from the board of directors.

Chrysler's 1983 average worldwide employment figure was 81,478, up from the 1982 figure of 73,714. The total 1983 payroll was $2,446.9 million, up from $1,795.6 million in 1982.

Following is a comparison of Chrysler Corp.'s 1983 and 1982 financial results:

(Dollars in millions)	1983	1982
Net sales	$13,240.4	$10,044.9

AMC ends '83 on upswing

'It has been a long dry spell'

American Motors ended 1983 on a positive note, reporting a profit of $7.4 million for the fourth quarter of the year. It was the company's first quarterly profit after 14 consecutive quarters of losses.

For the full year, AMC reported a net loss of $146.7 million, or $2.11 a share, compared with a net loss of $153.5 million, or $2.85 a share, in 1982. The per-share loss in 1983 reflected the issuance of additional common stock in 1983.

Net sales for 1983 were $3.3 billion compared with $2.4 billion in 1982.

Combined worldwide automobile and Jeep vehicle wholesale sales for 1983 were 383,462 units, up 34 percent from 286,520 units in 1982. Automobile wholesale sales were 270,019 units compared with 195,791 in 1982, an increase of 38 percent. Jeep vehicle wholesale sales were 113,443 units, compared with 90,729 in 1982, an increase of 25 percent.

Paul Tippett, chairman and chief executive officer, and Jose J. Dedeurwaerder, president and chief operating officer, expressed delight over the fourth-quarter profit. "It has been a long dry spell. The positive results stem from our major success with the new Jeep Cherokee and Wagoneer and the continuing success of the Renault Alliance and its new companion, the Renault Encore. Although we did not earn a profit for the full year, 1983 was a year of significant achievement and turnaround for AMC," they said.

"Consumer response to the Alliance was so enthusiastic that the subcompact sedan broke all sales projections, reaching the first-year sales objective of 100,000 units in June

Continued on Page 78

Ford

Continued from Page 75

manufacturing facilities outside the U.S. Partial offsets included a record car share in Europe, improved car and truck industry volumes in Europe and Canada, and a higher truck share in Canada. Dollar sales outside the U.S. were $16.1 billion in 1983; factory sales were 2,308,000 units, up 3 percent from 1982.

Ford's position in overseas markets remained strong in 1983. For the 19th consecutive year, Ford sold more vehicles overseas than any other U.S.-based manufacturer. In Europe, Ford's 12.6 percent car market share was a record for the second consecutive year, reflecting success of the new Sierra, Sierra XR4i and Orion, and strong industry sales in the United Kingdom, where Ford is market leader.

In Latin America, Ford maintained truck leadership in 1983 with a market share of 25.8 percent, an improvement of 3.1 percentage points from 1982, and Ford's car market share increased half a point to 19 percent in 1983. In the Asia-Pacific region, Ford maintained car and combined car and truck sales leadership in Australia for the second consecutive year.

Summing up, Caldwell said, "Results in 1983 demonstrated that success comes from attention to the basics of our business —getting our products and costs right, continuing our investment in quality improvements and advanced technology, and working together in an atmosphere of mutual confidence among our employes, our union, our suppliers and our dealers.

"Many more good years lie ahead. Their realization, however, will require a combination of public and private efforts. It will take continuing determination in the private sector to step up to our responsibility to be competitive. It will also require the pursuit of policies at the national level that both recognize and reinforce the importance of the automobile industry to the overall U.S. economy."

Following is a comparison of Ford's 1983 and 1982 financial reports:

(Dollars in millions except per share and hourly amounts.)	1983	1982
Sales of all products	$44,455	$37,067
Net Income (Loss)	$ 1,867	($658)
Net Income (Loss) per share	$ 10.29	($3.64)
Cash Dividend per share	$ 0.50	00
Average number of shares (in millions)	181	181
Average number of employes worldwide	380,000	379,000
Payroll (in thousands)	$ 9,125	$ 8,865
Total labor costs (in thousands)	$12,348	$11,757
Total cost of an hour worked—U.S. hourly employes	$ 22.67	$ 23.37

AMC

Continued from Page 76

and exceeding that objective for the year by 40,570 units.

"Due mainly to the Renault Alliance and Encore models, our 1983 passenger car sales in the U.S. reached 226,580 units—the highest level in seven years and up 51 percent from 1982," they said. "It also was a record year for the Renault nameplate in the U.S.—179,419 sales compared with 91,981 in 1958, the prior record year.

Sales of four-wheel-drive Jeep vehicles in 1983 were the best since 1979 and up 29 percent from the prior year.

The Jeep Cherokee and Wagoneer SportWagons were the first all-new Jeep line in 20 years.

American Motors achieved other important objectives during 1983. An all-new four-cylinder engine designed by AMC was launched with the new Jeep vehicles in the fall.

As a result of increased Jeep production, all laid-off employes were recalled at Toledo and the Jeep work force was increased by new hires. At Kenosha, only a few hundred employes remained on layoff as 1983 ended. Labor settlements were reached with represented hourly employes at AMC's Canadian facilities in Brampton and Stratford, Ont.

On the international front, a major 1983 development was the signing in May of a joint venture agreement to build Jeep vehicles in the People's Republic of China. Beijing Jeep Corp., the company created by the agreement, began operating in January, 1984. The joint venture gives AMC entry into the vast Chinese automotive market and a strategic manufacturing base for competing in the rapidly growing markets of the Asia-Pacific region. There also was some strengthening in the economies of AMC's important Latin American export markets during 1983.

"The outlook for 1984 is encouraging. We have set attainable goals that are consistent with our long-term strategy and these goals should result in profitable operations for the year," said Tippett and Dedeurwaerder. "Particularly encouraging is the fact that Jeep production at our Toledo plant is now higher than at any time since the plant was acquired from Kaiser in 1970.

"Our worldwide sales goal for 1984 is 450,000 units, an increase of 17 percent from last year. In the U.S., the passenger car market is increasing gradually and the four-wheel-drive market continues to improve dramatically," they said. "Against this backdrop, our strategy has been to launch a consistent stream of new products. So far, this strategy has been validated by the Renault Alliance and Encore and the Jeep Cherokee and Wagoneer. We now need to move forward with more ambitious goals, and plan to expand our passenger car coverage into the compact and intermediate market segments and also expand our coverage in the light truck market."

Dealers

For franchised new car and truck dealers in the United States, 1983 started on a new upbeat mood. There were scattered signs that good times were ahead. While dealers had been plagued in 1982 and 1981 by a constant battle for survival, the enthusiasm for 1983 spelled recovery.

At the 1983 National Automobile Dealers Assn. Convention and Exposition, optimists — dealers, factory officials, auto trade association representatives and exhibitors—filled the halls. Attendance was up substantially from the preceding year.

Dealers got down to business selling cars and trucks. By spring the much-heralded recovery was in full bloom. Rebates and other consumer incentives were no longer a necessity. Interest rates came down and sales went up. Factory rehiring was on the upswing and production lines were rolling.

By year-end sales were even better than predicted. Dealers sold 9.2 million cars and 3 million trucks. Reflecting that improvement, 1983 marked the first time since 1955 that there was an increase in the number of dealerships handling domestic makes.

At year-end there were 20,841 dealerships in operation in the United States, up 42 from the 20,799 counted a year earlier. In the 27 years, 1956 through 1982, the total plunged from 41,018 to 20,799, a drop of 49 percent. During 1983 there were moderate dips in the count during the first and second quarters and then a strong recovery that put the total on the plus side for the year.

Domestic dealer count up first time since 1955

Chrysler Corp. and Ford Motor Co. were the chief factors in last year's gain. Chrysler added 227 dealers, its biggest increase since 1965, and Ford went up 94. It was Ford's greatest upswing since 1957 when it was building a retail organization for a car called Edsel.

Elsewhere, there were dips last year of 120 outlets for General Motors, 63 for American Motors-Renault and 28 for Volkswagen of America. Industry wide there was an aggregate advance of 110. A change in the number of intercorporate duals cut the industry's gain to 42.

The number of dealers in the United States carrying imported cars rose by 85 in 1983, a gain of just one percent, to be sure, but the first full-year gain since 1977. It was the strength of the domestic dealers taking on import lines that made the import dealer number swell.

The number of dealers carrying only imports actually declined during the year. And that decline was more than enough to offset gains in the domestc dealer population in 1983. When everything was tallied, the census found eight fewer dealers at the end of 1983 than one year earlier. The totals were 24,721 compared with 24,729.

Breaking that down, 10,096 dealers carried import lines at year-end. Of those, 3,880 carried only imports. Another 20,841 were domestic dealers, with or without an import line. One year earlier, 10,011 dealers carried imports; 3,930 carried only imports, and 20,799 were domestic dealers.

The overall loss of eight dealerships was the smallest loss since record keeping of import and domestic dealer populations began. The only year to post a gain was 1964.

BIG FOUR FINANCIAL RESULTS

(In millions)

	Sales* Year 1983	Sales* Year 1982	Net Income (Loss) Year 1983	Net Income (Loss) Year 1982
American Motors	$ 3,428	$ 2,878	($ 147)	($153)
Chrysler Corp.	13,240	10,057	701	170
Ford Motor Co.	44,455	37,067	1,867	(658)
General Motors	74,582	60,026	3,730	963
TOTAL	$135,705	$110,028	$6,151	$322

*AMC sales include AM General, which was sold in 1983. If sales were restated to eliminate AM General, 1983 total would be $3.272 billion; 1982, $2,393 billion. Chrysler 1982 sales include Chrysler Defense, which was sold in 1982. If sales were restated to eliminate Chrysler Defense, 1982 total would be $10.045 billion.

Suppliers

The recovery in car and truck sales brought welcome business to the suppliers of the auto industry. The major suppliers of steel, plastics, rubber and aluminum all reported increased production in 1983.

Shipments of reinforced plastics composites in 1983 totaled an estimated 1.923 billion pounds, up 25.8 percent over 1982. Transportation continues to be the top market for reinforced plastics composites.

Metallic plated and coated plastics consumption is expected to double between 1980 and 1990. On a tonnage basis, production will improve from 95 million pounds to 190 million pounds in 1990, representing an average annual gain of 10 percent.

Rubber consumption in North America in 1983 recovered significantly from 1982's level but still was lower than the high level achieved in 1968.

The upturn in 1983 production allows North American steel producers to embark on a plan to upgrade facilities. The modernization projects include continuous annealing lines, continuous casters, hot strip mills and galvanized facilities.

U. S. die casting industry sales climbed 12 percent in 1983 to $5.5 billion, following a decline the previous year. The chemical industry, pulled down by several years of a sagging national economy, posted healthy gains during a much-improved 1983.

Automotive electronic devices represent an extremely high growth market. Non-entertainment automotive electronic devices will jump from $1.06 billion in 1982 to $4.6 billion in 1988. Further increases are expected in electronic fuel injection systems, instrument clusters, climate control, skid control, traction and braking, suspension and steering control.

Rise in output of components and materials

The domestic auto makers increased use of zinc and one-sided galvanized steel in 1983. The typical U. S.-built car contained 55 pounds of one-side galvanized steel, 120 pounds of two-sided and 98 pounds of Zincrometal. The zinc content per car of the three steel types tallied up as .90 pounds for one-side, 3.94 pounds for two-side and .61 pounds for Zincrometal.

The net zinc coating total amounted to 5.45 pounds per average car compared to the 1982 figure of 5.34, a 2.1 percent gain. The use of magnesium continues to gain popularity in the U. S. auto industry. While current use of magnesium is less than one pound per car, estimates run as high as two to three pounds by 1990.

The average U. S.-produced 1984 model car contains 137 pounds of aluminum, two pounds more than 1983 models. For the 1984 model year the auto makers began using aluminum radiators, replacing copper and brass radiators. The industry expects that half of the cars and trucks made in the U. S. will have aluminum radiators by 1986.

American machine tool orders rose 13 percent in 1983, according to the National Machine Tool Builders' Assn. Net new orders of cutting and forming machine tools totaled $1,696 million for the year compared to $1,498 million in the previous year.

In the two basic categories, metal cutting tools recorded an 8 percent order increase while metal forming machine tool orders rose 26 percent.

Zinc

9.6 pounds per car

America's four major automakers averaged a 2 percent increase in per vehicle use of zinc in 1983 models.

The typical U.S.-built car contained 55 pounds of one-side galvanized steel, 120 pounds of two-side and 98 pounds of Zincrometal. The zinc content per car of the three steel types tallied up as .90 pounds for one-side, 3.94 pounds for two-side and .61 pounds for Zincrometal. The net zinc coating total amounted to 5.45 pounds per average car compared to the 1982 figure of 5.34, a 2.1 percent gain.

Since the stamping of steel results in a 35 percent offal factor, the gross amount of zinc consumed to produce the typical 1983 American car actually totaled 8.38 pounds. Approximately 1.25 pounds of zinc was added to that to account for the zinc rich paint incorporated into the average auto, producing a cumulative consumption total of 9.63 pounds.

The 1983 figures revealed a trend toward utilization of heavier zinc coatings by U.S. car makers. Per vehicle use of one-side galvanized, which contains 32.8 pounds of zinc per ton, rose from 52 to 55 pounds, and deployment of two-side galvanized, containing 65.6 pounds of zinc per ton, increased from 116 to 120 pounds. Use of Zincrometal, which has a zinc content of 12.5 pounds per ton, dropped from 109 to 98 pounds.

General Motors achieved the highest per vehicle zinc coating usage of 5.89 pounds, while American Motors had the lowest with 4.22 pounds. Chrysler registered a 5.70 pound rate and Ford used 4.84 pounds.

The varying figures represented diverse zinc coatings philosophies among the manufacturers. For example, Chrysler led the industry in the use of one-side galvanized, incorporating 161 pounds into each average car, while GM and Ford relied more on two sided, utilizing 133 pounds and 122 pounds, respectively. American Motors, on the other hand, was the only carmaker which chose to use no Zincrometal in its 1983 autos, relying solely on one- and two-side galvanized.

ZINC COATINGS CONTENT
Typical U.S. Car—1983

Type	lbs./steel	lbs./zinc
One-side	55	.90
Two-side	120	3.94
Zincrometal	98	.61
Net total (in finished car)	273	5.45
Gross total (zinc consumed)	—	8.38
Zinc rich paint	—	1.25
Cumulative total of zinc consumed	—	9.63

Machine tools

Orders up 13 percent

American machine tool orders rose 13 percent in 1983, according to the National Machine Tool Builders' Assn. Net new orders of cutting and forming machine tools totaled $1,696,050,000 for the year compared to $1,497,750,000 in 1982. However, shipments were down steeply at $1,845,600,000, a 49 percent drop from 1982's total of $3,604,400,000.

In the two basic categories of machine tools, metal cutting tools recorded an 8 percent order increase in 1983 at $1,151,550,000 while metal forming machine tool orders rose 26 percent, totaling $544,500,000. Metal cutting shipments were off 53 percent at $1,372,050,000 and shipments of metal forming machine tools dropped 33 percent to $473,550,000 during 1983.

Magnesium

More applications

World magnesium production during the first half of 1983 dropped 11,400 metric tons from the same period of 1982. Predictions for increased production in the second half of 1983 were positive, as inventories built in 1981 and 1982 dwindled, according to the International Magnesium Assn.

Magnesium continues to gain popularity in the U.S. automobile industry.

While current use of magnesium is less than one pound per car, estimates from a University of Michigan study predict use will be two to three pounds by 1990. This prediction is backed by at least one U.S. auto manufacturer, Chrysler Corp., which expects to reach that poundage by the end of the 1980s.

Chrysler began using magnesium shift handles in 1983 Dodge Shelby Chargers.

Chevrolet Corvette uses die-cast magnesium for the air cleaner and two rocker-arm covers.

Pontiac Fiero utilizes a grille made of magnesium. It is an assembly of three die-cast sections with a center portion and two side panels. The grille is the largest magnesium component used in the U.S. auto industry.

MAGNESIUM PRODUCTION BY WORLD ZONE

Year	U.S. & Canada	Western Europe	Asia & Oceania	Total
1978	143,900	54,000	11,300	209,200
1979	156,400	58,700	11,400	226,500

1982	97,800	52,800	5,780	156,380
First-half 1983	45,800	20,400	2,900	69,100

Source: International Magnesium Assn.

Plastics

Reinforced climb

Shipments of reinforced-plastics composites in 1983 totaled an estimated 1.923 billion pounds, up 25.8 percent over 1982. For 1984 the industry is looking to top the two billion pound "good old days" of 1978 and 1979, according to the SPI Reinforced Plastics / Composites Institute. The '84 forecast is for record shipments of 2.155 billion pounds this year, an increase of 12 percent over the poundage estimate for 1983. The previous high was 2.046 billion in 1979.

For the eighth straight year, land transportation was the top market for reinforced-plastics composites, moving up 28 percent to 458 million pounds in 1983. Increased production of cars and trucks was the major factor in the advance, but new applications, improved materials and innovative production techniques also played a role in the upswing.

Car body panels are the major product in the market, accounting for 76 percent of the reinforced plastics going into cars. The next largest area is underhood applications, followed by passenger compartment parts, electrical applications, and suspension, chassis and frame.

Die castings

Decline ends

U.S. die casting industry sales climbed 12 percent in 1983 to $5.5 billion, erasing 1982's decline, according to the American Die Casting Institute.

Zinc custom die casting sales were up 10 percent and pounds shipped were up 13 percent. Aluminum custom die casting sales were up 13 percent with pounds shipped up 16 percent. Magnesium custom die castings also exhibited growth.

ADCI expects zinc die casting sales to increase somewhat and aluminum sales to rise significantly in 1984.

Industry trends in 1983 included moves by the U.S. auto industry — die casting's largest customer — to reduce costs and increase sales, and many customers pressured die casters to maintain or reduce prices.

Other die casting trends included increased foreign competition in subassemblies and parts for finished products; newer applications and product redesigns in traditional markets; and a decline in captive die casting facilities.

Tires, rubber

Rebound in 1983

The International Institute of Synthetic Rubber Producers Inc., said rubber consumption in North America in 1983 recovered significantly from 1982's level but still was lower than the level achieved in 1968.

Projections of rubber demand through 1988 show a compound annual growth rate of 2.3 percent, which is slightly below the generally accepted GNP projections of 3 to 4 percent annually.

Because of the development of longer wearing and smaller tires, the proportion of total rubber used in tires is projected to decline from 61.9 percent in 1983 to 61.4 percent in 1988. During this same time span, however, synthetic rubber is expected to increase from 72.3 percent to 72.7 percent of the total.

A large portion of this strength is expected to be in ethylene-propylene rubber in non-tire applications.

Meantime, the Rubber Manufacturers Assn. reported U.S. production and shipments of car, truck and bus, and mobile home tires increased in 1983.

SUPPLIERS

Chemicals

Healthy gains

The chemical industry, pulled down by several years of a sagging national economy, posted healthy business gains during a much-improved 1983, according to the Chemical Manufacturers Assn.

CMA said industry sales rose 9.6 percent during 1983 over the year before, to $189 billion. The sales gain, CMA said, was the result of an increase in the volume of products sold—and not the upward movement of prices.

Myron Foveaux, CMA assistant director of government relations for international trade and economics, said sales during 1984 are expected to rise 13 percent above last year.

Steel

Making moves

North American steel producers are making moves to upgrade facilities.

The modernization move falls under four headings: Continuous annealing lines, continuous casters, hot strip mills and galvanizing facilities. In addition, companies are doing a great deal within their mills to improve steelmaking technologies.

Continuous annealing lines of Bethlehem Steel Corp. and Inland Steel Co. came on-stream at the end of 1983. Both facilities produce high-strength and ultra high-strength steels for automotive products. The lines allow for better control of heating and cooling treatments at much faster rates than previously possible.

Continuous casters, which convert liquid steel directly into solid basic forms ready for rolling into finished products, offer improvements in quality and advantages in energy and manpower over the traditional ignot casting - stripping - reheating-primary rolling technique. In a three-year period ending in 1984, domestic steelmakers will have installed 16 new continuous billet and slab casters.

New hot strip mills have computerized operating and quality control systems.

The big push for galvanized capacity is coming from Detroit as a result of car companies' emphasis on vehicles with long-lasting corrosion protection. While hot-dipped galvanizing accounts for the vast majority of production today, there is interest in utilizing electrolytic galvanizing among the North American steel producers. This is a cold process which does not alter the base material's mechanical properties. It produces steels with more uniform coatings, and can make galvanized steel with improved surface quality.

Meantime, further improvement in corrosion resistant cars is a major need perceived by both auto company engineers and steel producers, according to a survey taken by the Committee of Sheet Steel Producers, American Iron and Steel Institute (AISI).

When asked, "Do vehicle producers perceive a need for further improvement in corrosion resistance from today's cars?" with choices ranging from 6 (strongly agree) to 1 (strongly disagree), the car engineers responded with an average of 5.5.

Car company engineers forecast the use of galvanized and other coated steels in a typical car body in 1990 will increase to 413 pounds. A typical 1984 car is estimated to contain 300 pounds of galvanized and other coated steels. The net increase of 113 pounds translates into a 38 percent increase.

Plastics

Plated/coated rise

Metallic plated and coated plastics consumption for both industrial - functional and consumer - decorative purposes is expected to double between 1980 and 1990, according to Margolis Marketing Research Co. On a tonnage basis, total use of plated/coated plastics in the U.S. is forecast to increase from 95 million pounds in 1980 to 190 million pounds in 1990, representing an average annual gain of 10 percent.

The principal reasons for the increase are improved metallizable plastics, advanced equipment technology and larger market demand.

In the mid-1980s significant shifts are occurring. Chrome plating, which dominated the plating/coating on plastics business in the 1970s with more than 90 percent of the total market, is expected to decline to 75 percent.

Vacuum metallizing and sputtercoating are attracting greater attention, while improved basecoats and topcoats are expected to contribute to greater use of vacuum chamber processes. Hot-stamping foil compositions and equipment, especially special-function coats for higher mechanical properties (impact resistance) and higher-speed stampers, are expected to move closer to the limelight during the second half of the decade.

METALLIC PLATED & COATED PLASTICS CONSUMPTION IN U.S. (millions of pounds)

Plastics	1970	1975	1980	1985	1990

Aluminum

Adding pounds

The average U.S.-produced 1984 model car contains 137 pounds of aluminum, two pounds more than in 1983 (see table, Page 92).

Major news for 1984 is that it marks the year when the aluminum radiator began replacing copper and brass in earnest. Ford Motor Co. uses aluminum radiators in its Escort/Lynx and Tempo/Topaz lines. General Motors puts them in its A-body line, its Pontiac Fiero, Pontiac Firebird and Chevrolet Corvette. The Aluminum Association Inc. predicts that half the cars and trucks made in the U.S. will have aluminum radiators by 1986.

Electronics

Rising high-tech

Detroit's emphasis on high-tech cars featuring computerized controls will jump the market for non-entertainment automotive electronic devices from $1.06 billion in 1982 to $4.6 billion in 1988 (in constant dollars), according to a study by Frost & Sullivan.

The rising use of electronic fuel injection systems — which allow for accurate and consistent fuel delivery, fuel economy, and increased power—will help the drivetrain control segment to dominate the auto electronics market, growing from $600 million in 1982 to a market worth some $2.3 billion in 1988, a 50 percent share of the total market. (All figures are for electronics used in U.S.-made cars only.)

With developments in instrument clusters and LCDs, and with new applications in road maps and large area displays, F&S predicts considerable growth in the instruments and displays category. Annual volume is projected to grow from $170 million in 1982 to $875 million in 1988. LEDs are already being used extensively.

Substantial growth in electronics for climate control, skid control, traction and braking, active suspension and load leveling, and steering control is predicted.

ALUMINUM PARTS ON 1984 CARS

BODY APPLICATIONS

Arm Rest Frame, Sheet—AMC, Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac some models.

Carpet Scuff Plate, Sheet — Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac, Ford, Lincoln, Mercury—some models; Chrysler, Dodge, Plymouth, AMC, VW Rabbit (all models).

Door Lock Spacers, Cast — Buick LeSabre, Cadillac de Ville, Chevrolet Caprice, Oldsmobile 88.

Fuel Tank Door and Bezel, Headlamp Opening Doors, Instrument Panel Reinforcement, Sheet—Chevrolet Corvette.

Head Rest Bar, Extruded — Buick, Cadillac, Chevrolet, Ford, Mercury, Oldsmobile, Pontiac—some models; Chrysler, Dodge, Plymouth—all models.

Hood - Inner and Outer, Sheet, Painted; Hinges, Sheet—Oldsmobile Cutlass, Toronado, 88, 98—some models.

Hood Latch Reinforcement, Sheet—Pontiac—some models.

Knee Bar—Extruded, Sheet—VW Rabbit.

Load Floor, Sheet—Buick, Oldsmobile, Pontiac (B-body) station wagon; Ford Mustang, LTD (station wagon); Mercury Capri, Marquis (station wagon).

Luggage Rack and Air Deflector, Sheet, Extruded—Buick, Chevrolet, Oldsmobile, Pontiac — some models; AMC; Ford LTD; Mercury Marquis; Chrysler, Dodge, Plymouth station wagons; AMC—most models; VW Rabbit.

Seat Backs, Sheet—Buick, Chevrolet, Oldsmobile, Pontiac; Ford, Mercury — station wagons; Cadillac Fleetwood.

Seat Frame, Extruded — Ford Mustang; Mercury Capri.

Seat, Front, Adjustment Spacer, Cast — Chrysler, Dodge, Plymouth—some models.

Seat-Power Adjustment Assembly, Forging, Sheet—Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac—some models.

Steering Wheel—Buick — some models; Ford Mustang; Mercury Capri; VW Rabbit.

Sun Roof Hatch Frame, Sheet, Extruded — AMC; Chevrolet; Chrysler, Dodge; Ford, Lincoln, Mercury; Plymouth; Pontiac; VW Rabbit—some models.

Tailgate Hinge, Extruded — AMC Jeep Cherokee and Wagoneer.

Tulip Panel, Sheet—Buick Skylark, Oldsmobile Omega.

BRAKE SYSTEM

Brake Drums, Cast Composite—Buick Regal; Cadillac — some models; Chevrolet—some models; Oldsmobile Cutlass; Pontiac Firebird; Ford LTD, Mustang; Mercury Capri.

Brake Silencer Pad, Cast — Dodge Omni; Plymouth Horizon.

Calipers and Mounting Plates, Cast—Chevrolet, Pontiac Fiero.

Master Cylinder, Cast — AMC, Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac — most models; Ford, Lincoln, Mercury; Chrysler, Dodge, Plymouth—all models.

Master Cylinder Primary and Secondary Piston Wheel Cylinder Piston, Cast—Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac; Ford, Lincoln, Mercury; Chrysler, Dodge, Plymouth —all models.

Pedal Bracket, Sheet—Chevrolet Corvette.

Power Brake Booster Plate, Sheet—Ford Escort, Mercury Lynx.

Proportioning Valve, Extruded —AMC Jeep; Cadillac DeVille; Pontiac Fiero; Ford Escort, LTD, Crown Victoria; Lincoln—all models; Mercury Lynx, Grand Marquis; Renault Alliance; VW Rabbit.

Splash Shield, Sheet — Chevrolet Corvette; Dodge Aries, Omni; Plymouth Horizon, Reliant.

BUMPER SYSTEMS

Bumper, Face Bars—Extruded, Anodized — Ford Tempo, LTD station wagon (rear), Escort; Mercury Topaz, Marquis station wagon (rear), Lynx; Dodge Omni, Rampage, Caravan T-115; Plymouth Horizon, Scamp, Voyager T-115; AMC Eagle, Jeep Cherokee, Jeep Wagon; VW Rabbit.

Bumper, Face Bars, Sheet, Chrome Plated — Lincoln Town Car.

Bumper, Face Bars, Sheet, Anodized—Buick Skylark, Oldsmobile Omega.

Bumper Reinforcements, Extruded—Mercury LN7 (front).

Bumper Reinforcements and Brackets—Sheet — Buick Century, Electra, LeSabre, Regal; Cadillac DeVille, Eldorado, Seville; Chevrolet Caprice, Corvette, Impala; Oldsmobile, Cutlass, 88, 98, Toronado; Pontiac—most models; Ford—most models; Lincoln—most models; Mercury—most models; Dodge Omni; Plymouth Horizon (2-door).

Override, Shield, Sheet—Chevrolet Corvette.

Skid Bar Plate, Sheet—Chevrolet Corvette.

CHASSIS, STEERING AND SUSPENSION

Frame Extension—Sheet, Spring Anchor Plate—Sheet, Spring Protectors — Sheet, Spring Seat — Sheet, Stabilizer Bracket — Sheet, Stabilizer Insulator — Sheet, Steering and Rear Knuckle — Forged; Power Steering Pump Bracket — Cast, Power Steering Reservoir Bracket — Cast, Upper and Lower Control Arms — Forged, Wheel Spindle Control Rods—Forged—Chevrolet Corvette.

Power Steering Bracket, Cast—Chevrolet Corvette; Ford — all models; Lincoln — all models; Mercury—all models.

Power Steering Pump Housing —Ford Mustang.

Rack and Pinion Housing, Cast — AMC — most models; Buick Skylark, Century; Cadillac — some models; Chevrolet Citation, Celebrity, Chevette. Oldsmobile Ciera, Firenza, Omega; Pontiac 2000, 6000, Phoenix; Ford Escort, Tempo; Lincoln — some models; Mercury Lynx, Topaz; Chrysler, Dodge, Plymouth; VW Rabbit.

Steering Column Bracket, Extruded—Chevrolet Corvette; Ford pickup.

Steering Column Gear Housing, Cast—Chevrolet Chevette, Corvette; Pontiac 1000; Ford Mustang; Mercury Capri; Chrysler — most models; Dodge Aries, Omni; Plymouth Reliant, Horizon; VW Rabbit.

DRIVETRAIN AND TRANSMISSION ACCESSORIES

Carrier - Forward/Reverse, Reactor Connector, Intermediate Band Servo Cover and Piston, Kickdown Servo Rod Guide, Cast—Ford, Lincoln, Mercury—some models.

Clutch Pistons, Cast — Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac — some models; Chrysler, Dodge, Plymouth — most models.

Forks, Cast — Buick, Chevrolet, Oldsmobile, Pontiac — some models; Chrysler, Dodge, Plymouth—most models.

Governor Body, Lower and Upper Valve Body, Cast — Ford, Lincoln, Mercury; Chrysler, Dodge, Plymouth — some models.

Housing; Transaxle, Transmission, Clutch, Convertor, Extension, Cast — Most makes and models.

Output Shaft Retainer, Cast — AMC; Chrysler, Dodge, Plymouth.

Pump Body, Cover, Support, Cast — Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac — some models.

Rear Band Servo Piston, Cast—AMC; Ford, Lincoln, Mercury; Chrysler, Dodge, Plymouth — some models.

Stators, Cast — Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac; Ford, Mercury, Lincoln; Chrysler, Dodge, Plymouth; AMC — some models.

Transfer Body Plate, Cast — AMC Eagle, Jeep Wagoneer, Cherokee; Dodge Omni; Plymouth Horizon.

Propeller Shaft, Rear Wheel Drive Shafts—Extruded Forged, Driveline Support—Sheet, Rear Axle Carrier Housing — Cast, Differential Housing—Cast, Rear Axle Cover Assembly — Cast, Accelerator Pedal, Sheet — Chevrolet Corvette.

ENGINE AND ACCESSORIES—HEATING AND COOLING

Air Conditioning: Evaporators—Brazing Sheet, Condensor Coils — Finned Tube, Line Tubing, Muffler—Sheet, Suction Control Valve, Skived Fin Condensor, Compressor Piston—Cast, Compressor Housing — Cast, Mounting Brackets, Cast—Most makes and models.

Fan Blades, Sheet — Buick, Cadillac, Chevrolet; Chrysler, Dodge; Ford, Lincoln, Mercury; Oldsmobile, Pontiac; Plymouth —some models.

Radiator, Tube and Sheet — Buick Century — some models; Chevrolet Camaro, Ciera—some models; Ford Escort, Mercury; Pontiac—most models; VW Rabbit.

Radiator Hose Support — Chevrolet Corvette.

Radiator Shroud, Sheet — VW Rabbit.

Radiator Support Assembly, Sheet—Ford, Lincoln, Mercury —some models.

Water Inlets, Outlets, Water Pump Housing, Cast — Most makes and most models.

Water Pump Mounting Bracket, Sheet—Ford Mustang, Mercury Capri; Dodge Aries and Omni; Plymouth Reliant and Horizon.

ENGINE

Block, Cast—Cadillac 4.1-liter.

Cylinder Heads, Cast — Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac — some diesels; Ford, Lincoln, Mercury — some models; Chrysler, Dodge, Plymouth — most models; Renault Alliance, Encore; VW Rabbit.

Intake Manifold, Cast — All makes, most models.

Pistons, Cast — All makes and models.

Front Cylinder Cover, Cast — Most makes, most models.

Timing Chain Cover, Cast or Sheet—All makes, most models.

Oil Pan, Cast — Ford Tempo, Mercury Topaz.

Oil Filter Base, Sheet — Dodge Omni, Plymouth Horizon; AMC — some models. **Cast** — most makes, some models.

Oil Filter Cap, Sheet — Pontiac —most models; Ford—most engines.

Oil Pump Body, Cast — Most makes, most models.

Rear Cover Plate, Alternator Bracket, Sheet—Cadillac Fleetwood, Seville; Ford—some models; Mercury—some models.

Rocker Arm Pivot, Cast — Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac—some models.

Cam Shaft Housing, Sheet — Chevrolet Chevette.

Cam Gear, Cast—Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac — most models; Chrysler, Dodge—most models; Plymouth —some models.

Drive Belt Tensioner, Cast — Chevrolet Corvette.

EMISSIONS, FUEL, ELECTRICAL

Air Cleaner Tray and Cover, Sheet — Ford — some models; Mercury—some models.

Accelerator Pump Cover, Cast—Ford, Lincoln—some models.

Air Pump Bracket, Cast—Buick —some models, Chevrolet Corvette; Ford, Lincoln, Mercury—some models; Chrysler, Dodge, Plymouth—all models.

Air Pump Housing, Cast—Most makes, most models.

Carburetor: Air Horn, Body, Spacer, Cast—Most makes, most models.

Fuel Pump Body, Throttle Body Injector, Cast—Most makes and models.

Fuel Filler, Tube Drawn—AMC —some models. VW Rabbit.

Fuel Pump Plate, Sheet—Chevrolet Corvette.

Alternator Housing, Heat Sink —Cast—All makes and models.

Alternator Bracket, Cast — Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac; Ford, Mercury, Lincoln—some models.

Distributor Housing, Cast — All makes and models.

Ignition Module, Cast — Most makes, some models.

Miscellaneous Engine Components: Engine Temperature Sensors, Front Wiring Harness, Fuel Injectors—All makes, most models.

Miscellaneous Fasteners - Screw Machine/Upset Parts: Ashtray Rivets, Distribution Cap Insert, Drive Pinion Gear for Power Door Locks, Headlamp Adjusting Screws, Ignition Cast Insert, Seat Belt Actuator Pins, Stator Rivets, Brake Valve Parts, Windshield Wiper Bolt—All makes, most models.

TRIM MOLDINGS—Sheet, Anodized

Body, Dashboard, Door, Fender, Grill — some. **Lights** — some. **Rocker Panel**—some. **Roof, Window, Windshield** — most makes and models — Buick; Cadillac Fleetwood, Seville; Chevrolet; Chrysler, Dodge, Plymouth—all models; VW Rabbit.

Door Belt Trim Support—Buick, Cadillac Fleetwood, Seville; Chevrolet; Chrysler, Dodge, Plymouth — all models; VW Rabbit.

Door Guards — Sheet, Stainless Steel — Clad — Buick Riviera; Cadillac Eldorado; Oldsmobile Toronado.

Wheel Opening Moldings — Cadillac Cimarron; Buick; Chevrolet; Oldsmobile; Pontiac; Ford, Lincoln, Mercury — most cars; Chrysler — E-Class, Fifth Avenue, New Yorker; Dodge 600, 600ES, Diplomat, Aries; Plymouth Reliant — most cars; AMC Concord, Eagle; VW Rabbit.

WHEELS

Forged — Buick Skylark, Skyhawk; Chevrolet Pickup/Van; Ford — most models; Lincoln Continental; Mercury — most models; Jeep Wagoneer, Eagle. **Sheet** — Chevrolet Corvette — spare.

Cast — Buick Century, Electra, Regal, Riviera; Cadillac Cimarron, Eldorado, Seville; Chevrolet Camaro, Celebrity, Citation, Corvette; Pontiac 2000, 6000, Bonneville, Firebird, Phoenix; Ford — most models; Lincoln — most models; Mercury — most models; Chrysler — optional all; Dodge—optional all; Plymouth —optional all; VW Rabbit.

WHEEL ACCESSORIES—Sheet, Anodized

Hub Caps — Buick; Chevrolet; Ford, Lincoln, Mercury — most models; Chrysler, Dodge, Plymouth—all models.

Trim Rings — Pontiac 1000 and 2000; Dodge Omni, Aries; Plymouth Horizon, Reliant; GMC — all models.

Wheel Covers — Buick, some models; Chevrolet — some models; Pontiac — some models; Chrysler—some models.

Spare Tire Carrier, Extruded — Ford Bronco.

Et cetera

This year's Et cetera includes a variety of charts, including auto scrappage rates, U. S. new car inventories, trends in prices of used cars, auto ownership costs and auto makers advertising expenditures.

During the year ended June 30, 1983, a total of 6.2 million cars were not reregistered and are presumed to have been scrapped, according to figures compiled by R. L. Polk & Co.

This compares with 6.9 million autos scrapped in the previous year and with the record scrappage total of 9.3 million during 1978-79.

Automobiles not reregistered during the period amounted to 5.8 percent of the car population, the smallest percentage since 1958-59 and a drop of less than one percent from 1981-82.

The registered passenger car population in the U. S. was 108.9 million on June 30, 1983, up 2.09 million from the previous year.

The number of trucks in use in the U. S. hit an alltime high of 38.14 million in mid-1983, up 1.16 million from one year earlier. It reversed a three-year decline in growth rates.

At 2.65 million, the number of new truck registrations was the highest since mid-1980. At 1.5 million, the number of trucks scrapped was slightly greater than mid-1982 but still well below the alltime high of 1.92 million sent to the scrappers in 1978-79.

Although new-car registrations in the year ended June 30, 1983 increased for the first time since 1979, more Americans held onto their older models longer than at any time since 1950, according to Polk.

The median age of the U. S. auto-

Car population, scrappage and inventory trends

mobile population hit 6.5 years in 1983, up from 6.2 years in the previous year.

New-car registrations between July 1, 1982 and June 30, 1983 numbered 8.3 million, an increase over the previous year's 7.9 million. At the same time, the number of cars 15 or more years of age grew by 1.08 million to a record 7.9 million registered.

The prices of used cars sold at auction were strong throughout 1983. The average "sold" price at wholesale auction opened 1983 at $4,646 and reached a high of $5,241 in October.

The price dipped to $4,308 in December, following the trend posted at holiday time in previous years. The price of used cars bounced back stronger than ever at the start of 1984 and reached their highest average ever, at $5,359 in January. Prices are compiled by Automotive News from used-car auctions throughout the country and computed on a simple average basis.

U. S. new car inventories in 1983 were on the low side throughout the year. A 60-day supply of cars is considered ideal for the industry.

There were only three months of 1983 in which new car inventories were above the 60-day mark—in January, February and March. This is considered normal. The first quarter is the time when auto makers are busy building supplies for the spring selling season.

As new-car sales climbed in 1983, the industry didn't stockpile cars as it used to do. The days of heavy inventories are over for the domestic industry. New-car inventories reached the low point of the year in June and July when a 47-days supply was recorded.

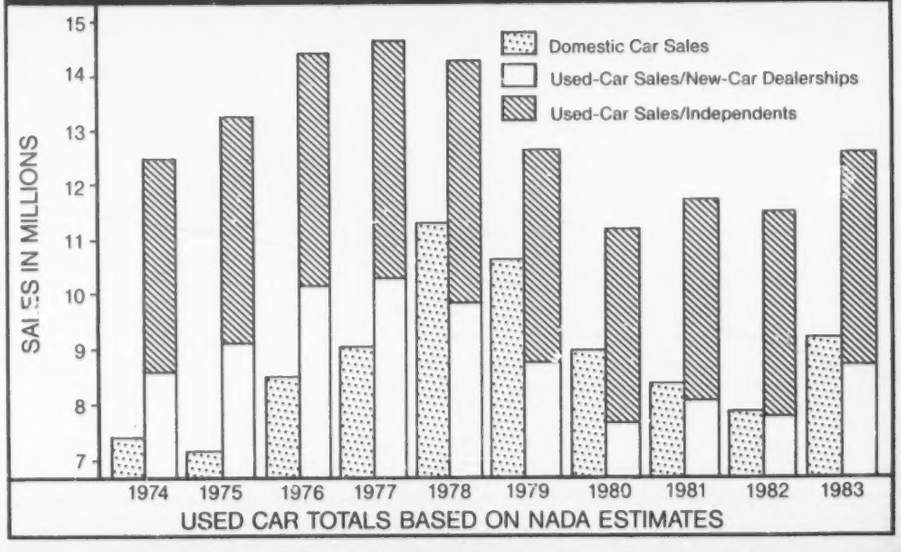
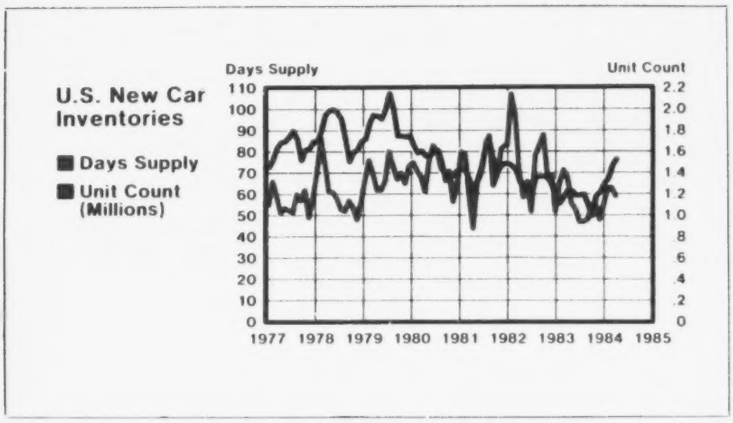
NEW & USED-CAR SALES COMPARISON



USED CAR TOTALS BASED ON NADA ESTIMATES



U.S. AVERAGE ANNUAL COSTS TO OWN AND OPERATE SELECTED 1984 MODELS

Make/Model	Cyl./Engine	Drivetrain	Operating (Variable)	Ownership (Fixed)	Total
Subcompact					
Chevrolet/Chevette	4/1.6L	RWD	$1,430	$2,428	$3,858
Ford/Escort L	4/1.6L	FWD	1,430	2,549	3,979
Compact					
Ford/Mustang L	4/2.3L	RWD	1,610	2,875	4,485
Plymouth/Reliant	4/2.2L	FWD	1,530	2,725	4,255
Intermediate					
Ford/LTD	4/2.3L	RWD	1,650	2,929	4,579
Oldsmobile/Ciera LS	4/2.5L	FWD	1,600	2,924	4,524
Mercury/Marquis	4/2.3L	RWD	1,650	3,014	4,664
Dodge/600	4/2.2L	FWD	1,610	2,973	4,583
Sports Specialty Cars					
Chevrolet/Camaro	4/2.5L	RWD	1,730	3,208	4,938
Chrysler/Laser	4/2.2L	FWD	1,490	3,215	4,705
Luxury					
Lincoln/Continental	8/5.0L	RWD	2,230	5,726	7,956
Cadillac/Eldorado	8/4.1L	FWD	2,130	5,704	7,834

BASIS: All costs based on 3 years/60,000 miles of ownership. All cars similarly equipped, including AT, PS, PB, AC, tinted glass, AM radio, wheel covers, body side moldings, and remote left mirror. Operating expenses include gasoline, oil, maintenance, and tires. Ownership expenses include licensing, depreciation, financing, taxes, and insurance ($100 deductible for comprehensive, $100/300/50M for property damage and personal liability, plus $250 deductible for collision).

*—Adjusted to reflect transfer of 1,310,916 passenger vans to truck total.

(1)—Each year many trucks are issued passenger car license plates due to their intended usage or local state laws. Beginning in 1966 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.

(2)—Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 approximately 181,000 passenger cars registered to fleets at out-of-state addresses have been included.

Adjustments for the absence of Oklahoma and other states have been made where applicable.

Upcoming convertible bows for stockholders

American Motors unveiled its first convertible in 17 years at last week's annual stockholders' meeting in Toledo. Based on the Renault Alliance, the convertible will go on sale this fall as a 1985 model. A 1.7-liter engine and five-speed transmission will be standard. Story on Page 3.

breaking news

GM profits are a record $1.6 billion for quarter

DETROIT. — General Motors reported that sales and profits for the first quarter were the highest of any quarter in its history. The company had net income of $1,614 million on sales of $22.9 billion. The previous highs were achieved just one quarter earlier with profits of $1,297 million on sales of $20.8 billion in the final three months of 1983. The first-quarter profits were 2½ times the $653 million in the first quarter of last year, and sales were up 37 percent from last year's $16.7 billion.

Audi boosts prices and dealer discount

TROY, Mich.—Volkswagen of America has increased the dealer discount and the prices on most Audi models. The discount rose to 15 percent from 14.5 percent on Audi 4000 units and to 17.5 percent from 16.5 percent on the Audi 5000 series. Price hikes on the 4000 were $85 on the GT Coupe, $260 on the four-door sedan and $330 on the Quattro four-door sedan. On the 5000 line, the boosts were $410 on the four-door sedan, $435 on the wagon and $455 on the Turbo four-door sedan.

Hawkins to head ITT auto operation

DETROIT.—Art Hawkins, formerly senior vice president and general manager of Walker Mfg. Co., a division of Tenneco, is joining ITT this week as head of its Automotive Products Worldwide operation, headquartered in suburban Bloomfield Hills. Hawkins had held a number of engineering and administrative positions at Chrysler Corp. before joining Walker.

California outlet on market for $15 million

Prices of dealerships rise

By Michelle Krebs
Staff Writer

The boom in new-car sales has triggered a dramatic turnaround in the dealership market.

What was a buyer's market only six months ago has turned to a seller's market, and the increased demand has caused price tags on dealerships to soar. Some industry observers say prices have never been higher.

Prices vary depending on location, the kind of franchise and the franchise's track record.

The highest prices are being demanded for dealerships — particularly those that sell high-ticket European models such as Mercedes-Benz and BMW as well as the popular Japanese brands — in growing areas including California, Florida and the rest of the Sunbelt.

Robert McElwaine, president of the American International Automobile Dealers Assn., said he knows a Mercedes-Benz dealership in Southern California is on the market for $15 million.

"That's the highest I've ever heard of. Maybe it's a new world's record," he said.

He said a BMW/Rolls-Royce dealership in Southern California sold recently for $3.5 million. The purchase arrangement included only the dealership, not the property on which the dealership stands, and requires an additional $42,000 a month in rent.

• "If you want to come to Denver to try to buy a dealership, you'd better bring bags of money," said William Barrow, executive vice president of the Metropolitan Denver Auto Dealers Assn. and the Colorado Automobile Dealers Assn.

"You could buy a bunch of Ford stores two years ago for inventory," Barrow added. "Today it's difficult, at least in Denver, to buy a Ford store at all. Ford has come on stronger than anyone ever thought it could two years ago."

Barrow noted the price also depends on how badly the owner wants to sell and how much cash he wants up front.

Dealer consultants say this is the time for dealers to sell. However some, who may have contemplated selling, now are reluctant. After two years of limited profits, dealers are seeing the cash roll in and are hesitant to sell out until they've made back some of their losses.

"If someone is going to sell,

Creative financing emerging as dealership prices climb. Page 50.

now is the time," said dealer consultant Lloyd Howard.

On the other hand, buyers have seen the last of the good deals.

"People wanting to buy a dealership waited to see if the car business turnaround was for real. They waited to see if it would last beyond two months," Howard added. "Some waited too long to get a good buy."

• Few bargains remain. While price tags have soared out of sight, the amount of Blue Sky that sellers demand has skyrocketed as well. (Blue Sky is the amount the seller receives on anticipated future profits.) A million dollars in Blue Sky is not uncommon.

"A year or two ago, when business was bad, a dealership sold without any Blue Sky," Howard said. "Today, they are taking top dollar. GM, Ford, Lincoln - Mercury dealerships and popular imports are getting healthy Blue Skys — as much as one to three years of potential profit.

"If a dealer made $800,000 in the past year, he's not going to sell unless he gets at least that much in Blue Sky," Howard added.

"We're seeing all kinds of prices," said Martin Swig, dealer/owner of the San Francisco AutoCenter. "We're hearing about a half million and a million dollars in Blue Sky in addition to assets."

Industry observers see the trend continuing through at least the next six months.

"The number of people who want dealerships far outnumber those who are selling — just like when Coors set up distributorships," said Kim Ross, of the New Car Dealers Assn. of Dallas. "And in a growth market, there are plenty of people with plenty of money."

Administration to fight domestic-content law

WASHINGTON. — With domestic-content hearings before a Senate committee only a few weeks away, the Reagan Administration is again prepared to offer vigorous opposition.

Commerce Secretary Malcolm Baldrige has taken the occasion to write Senator Robert Packwood, Oregon Republican, that the proposal violates the General Agreement on Tariffs and Trade (GATT), would invite retaliation from trading partners and would be a job-loser.

Packwood, already on record as an opponent of domestic content but yielding to a plea for hearings from Senator Don Riegle, Michigan Democrat, who sponsors the UAW-backed measure, has set several hearings.

Two will be in Washington; one will be in Portland, Ore., where dock workers and exporters to Japan may oppose it; one will be in Des Moines, where farmers may also oppose it, and one will be in Michigan, where auto workers may be heard along with auto companies, the former for the bill and the latter against it.

Baldrige, calling it anti-consumer, predicted a domestic-content law would increase auto prices 4.5 percent or about $450.

He called the domestic auto industry the "real success story" of the 1983 recovery, with each week bringing more good news.

He noted the 17-percent improvement in sales in 1983 over 1982 and predicted an even better 1984.

He also noted that productivity rose and so did employment. In short, neither the U. S. economy nor the domestic auto industry need protection, he said.

Last November, the domestic-content bill passed the Democratic controlled House, 219-199. Passage in the Republican-controlled Senate, especially with opposition from the Reagan Administration, is thought less likely.

Packwood, in an address to the Automobile Importers Assn., issued a strong warning to the Japanese that their country needs to open its market to beef, citrus and wood.

He pleaded with representatives of Japanese companies in his audience "not to make it so difficult politically that it becomes almost suicide to be on your side."

Packwood referred to a Ford Motor Co. statement dismissing the opening of Japan to more U. S. beef as being "symbolic" since the amount of beef was equal only to about 19,000 cars, but Packwood stressed that in countries in the Far East, "symbolism" is very important.

Even if moves made toward freer trade are not always equivalent, he said, small moves put the burden on American industry to compete with the Japanese.

While telling the importers that he has in the past been with them, it was clear that Packwood was warning that he could not always be counted on unless American companies have greater access to the Japanese market.

Changes sought include chain outlets, minimum investment

Work begins on 1985 GM franchise

By Richard Johnson
Staff Writer

General Motors dealers in the U. S. are seeking to ease corporate restrictions on chain ownership and reduce minimum investment standards for dealer principals as they begin work on a new franchise agreement to replace a pact which expires next year.

But after winning several major concessions in a basic sales contract approved in 1980, NADA representatives do not foresee any sweeping changes in the 1985 agreement.

The dealer organization is concentrating instead on a variety of technical matters, according to Robert Daly, NADA executive director for communications and industry relations. The most glaring issue pitting U. S. dealers and manufacturers — the question of fleet subsidies — is being left to the legislative arena.

Daly said NADA will focus more attention on corporate dealer relations policy behind

DeLorean's attorneys move for dismissal

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Defense attorneys began cross-examining the first government witness in the John Z. DeLorean drug trafficking trial here and moved for dismissal after they learned the FBI agent in charge of the sting operation threw away some of his original notes for the case.

Benedict Tisa, an FBI agent who posed as a crooked banker under the name James Benedict, admitted that he "probably threw away" some notes from the case.

That admission came under intense questioning by Howard Weitzman, who was trying to determine the cause of inconsistencies in the government-produced notes and reports on the case.

Weitzman noted that some of the documents carried date notations of 1983 rather than 1982. The entire investigation was conducted during 1982.

Tisa said the errors came while he was transcribing notes for the government last year.

Judge Robert M. Takasugi took the defense motion under consideration and had yet to rule by presstime.

Earlier in the week, Tisa concluded his testimony for the government by playing audio and video tapes that showed DeLorean seeking funds for his faltering auto company.

• The tapes also detailed the involvement of John Valestra, another undercover agent, who posed as John Vincenza, an underworld drug dealer, who would receive half the stock in DeLorean Motor Co. by investing up to $60 million in drug funds in the company.

Government tapes also showed DeLorean contacting William M. Hetrick, who was also netted in the sting operation, and telling him to go ahead and pick up "monkeys," a codeword for kilos of cocaine.

The last videotape shown by the prosecution was the now-famous tape showing DeLorean toasting the drug deal with undercover agents and calling the cocaine "better than gold" and saying that the drug deal came "in the nick of time."

That tape was made just moments before the former auto maker was arrested on drug conspiracy charges Oct. 19, 1982, at the Sheraton Plaza la Reina at the Los Angeles airport.

DeLorean's attorneys contend that the last tape was staged in that DeLorean came to Los Angeles seeking funds for his car company and was not expecting to see or deal with any drugs and that the government brought the 55 pounds of cocaine into the room only to make it appear that their client was committing a crime.

The government, although it agrees that DeLorean was not expecting to see the drugs, said it used the cocaine to gather additional evidence against DeLorean and to gauge the former auto maker's reaction to the drugs as it related to the deal.

Safety group warns owners of 1981-83 X-cars

WASHINGTON. — The Center for Auto Safety has issued a consumer advisory telling owners of some 1.5 million 1981-83 General Motors X-body cars to be extra careful in braking on slick roads and to take these cars into GM dealers to check front-brake caliper-pin corrosion.

The center cited 1,000 reports of spin-out after braking and said these cars — with 19 reported deaths — are almost as deadly as the much publicized 1.1 million '80 GM X-body cars, now involved in a trial in Federal court.

The center also attacked NHTSA for "similar footdragging" on these later X-body cars and for not issuing a governmental consumer advisory.

GM issued a strong reply to the center's action.

A GM spokesman said, "There is no safety-related problem due to caliper-pin corrosion on the 1981-83 X-cars."

Profit reported; convertible unveiled

AMC enjoys festive annual meeting

By Kathleen Hamilton
Financial Editor

TOLEDO.—Even without the chairman and president touring the auditorium in a new convertible, last week's annual meeting of American Motors stockholders had to be the most upbeat in four or five years. There were profits to report.

But the red Alliance convertible didn't hurt the mood. Driven by President Jose Dedeurwaerder, it was a prototype of what will be coming off the Kenosha (Wis.) line in the summer of 1984.

The last time AMC built a convertible was 17 years ago: The 1968-model Rambler Rebel SST. Although the Alliance was designed with help from ASC (American Sunroof), Southgate, Mich., it will be built on the AMC line with regular Alliances.

The new 1.7-liter four-cylinder engine, which will be an option on Alliance and Encore in 1985, will be standard equipment on the convertible. The two-door convertible will be offered in two equipment levels. Upscale DL and lower-line L.

Although AMC officials wouldn't give price tags, they said they would be competitive with the Chevrolet Cavalier, Pontiac 2000 Sunbird and Volkswagen Rabbit convertibles. That would put the Alliance convertible in the $11,000 to $12,000 range.

Sales are expected to be 7,000 to 8,000 in the first year, Dedeurwaerder said. Renault will not be offering a similar model.

The top is electrically operated. Tonneau cover is soft. Front shoulder harnesses fit into a widened area behind the B-pillar. That means rear passenger seating is reduced from three to two. Extra reinforcement will increase body weight slightly, an AMC spokesman said.

AMC also is looking at ideas for a minivan, Dedeurwaerder told reporters after the meeting. It would be "significantly" different from offerings of other makers and could be ready for production 18 months after a decision is made, he said.

He ruled out a derivation of the Alliance platform. That probably leaves a version of a Renault minivan that is in the works for Europe.

During the meeting, Chairman J. Paul Tippett told shareholders that, "barring major surprises in areas beyond our control—such as interest rates, inflation and general consumer confidence—we expect to be profitable for 1984 as a whole, although there could be a quarter where we break even or have a slight loss."

• Gains still have to be made in product, market position and profitability, he said. Dividends will not be paid this year, in order to funnel money into product development, he said later.

A proposal by stockholder Evelyn Y. Davis, to ensure corporate non-partisanship in political matters, received 2.8 percent of stockholder votes despite the fact that the person who introduced it for her said he was voting against it.

Davis wasn't at the meeting, and Tippett found someone to second the proposal only after telling shareholders that SEC rules demanded a second for the proxy proposal.

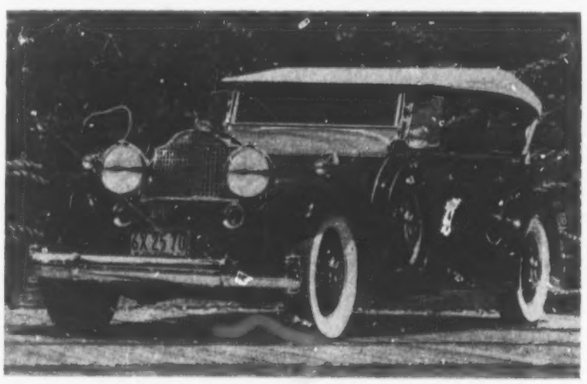
A proposal by shareholder Carl Olson to refuse to trade with Communist facilities using forced labor got 2.0 percent of the vote. The proposal was aimed at AMC's joint venture with China and with Renault's contract to build a plant in the Soviet Union. Renault owns 46 percent of AMC. Tippett said AMC doesn't trade with anyone using forced labor.

The 14 AMC directors were reelected overwhelmingly, and Touche Ross & Co. was returned as auditors.

FTC chairman is cleared in GM defect case

The Chairman of the FTC did not abuse the discretion vested in him because he participated in settling a GM defect case even though he had some two years before received from GM some $75,000 for work done in unrelated areas.

Federal Judge Harold H. Greene, in a case brought by the Center for Auto Safety, stopped short of disqualifying James C. Miller III and thus failed to send the GM transmission/diesel/camshaft case back to FTC. It is now being settled by arbitration before local Better Business Bureaus. An appeal is always possible.



Autos of 1932

A Packard Dual-Cowl Phaeton is one of a dozen automobiles from 1932 which will be featured June 1-Oct. 14 at the Natural History Museum, Los Angeles, as part of a series of exhibits commemorating the Xth Olympiad and the lifestyle of the period.

Deal's groundbreaking turns into an inside job

BEDFORD, O. — Participants in Bedford Toyota-Volvo's groundbreaking did not allow a little rain to spoil their parade.

Forced indoors by the weather, they ceremonially turned the first shovelfuls of dirt in a wheelbarrow inside the dealer's existing showroom.

In San Francisco area

Dealers escape earthquake damage

By Joseph Bohn
Marketing Editor

Fortune seemed to be smiling on California car dealers. Some of them might have lost a sale, but they suffered no real damage from last week's earthquake in the San Francisco area.

Most of the quaking occurred in the Morgan Hill area. There, Don Murtos Chevrolet had the "scary experience" of "cars jumping up and down" but no physical damage, according to Len Lofano, general manager.

"They (cars) didn't jump that high — probably no more than an inch or two," Lofano said, indicating no damage beyond a few bins in the parts department falling over.

Eight miles away in Gilroy, Calif., Marx Chevrolet-Buick had a power outage for about three hours, losing phone contact, but also escaping any real damage.

• "We didn't sell any cars yesterday (April 24) afternoon," said Bill Hija, general manager. "People were more concerned about damage to their homes." But none of the dealers in Gilroy really encountered any substantial damage, he added.

Farther away, in San Jose, Courtesy Chevrolet lost its phone contact for half an hour, and "that was all," said Charles Peradotto, general sales manager.

In San Mateo, European Volvo had "no damage that I know of," according to a dealership salesperson.

In Hollister, Calif., at Tipton Motor Sales, Jim Cangiamilla, sales manager, said "the only thing we had around here was a (damaged) restaurant. We were shaken up pretty good, but other than that it was all right."

"Most of these buildings can pretty much take a quake," he said.

"I talked to several dealers. They said they were shaken up pretty good, but didn't have any real problems," he concluded.

Worldwide partnership being formed

Dana, ZF to merge transmission units

TOLEDO. — Dana Corp. here and Zahnradfabrik Friedrichshafen (ZF) of West Germany, one of Europe's biggest transmission makers, have agreed in principle to merge truck transmission operations worldwide.

They are forming a partnership called ZF-Spicer International. Completion of the amalgamation is expected to take three to four months.

North American operations will be headquartered here under under ZF-Spicer North America. Other operations will be based in Friedrichshafen, Germany, Dana said.

The form and amount of capitalization has not been determined, Dana said. Each company will transfer to the partnership its truck transmission manufacturing facilities. ZF International will have eight plants in four countries, Dana said.

Regional subsidiaries will be responsible for manufacturing and marketing highway truck transmissions within their geographic areas.

Referring to the increasingly international nature of the truck market, Gerald B. Mitchell, Dana chairman and chief executive officer, said: "The only way a component supplier will be able to serve this market is to become an international supplier on a major scale. Our customers have asked us to do just this."

Component manufacturers must be able to produce where trucks are made if they are to survive, he said.

• Mitchell said costs of product development to meet world needs region by region would be huge and essentially unproductive. "This is a good venture for ZF and Dana and for the people of both companies," he said.

ZF is an important maker of passenger-car transmissions for the European market. The partnership involves truck transmissions only, the companies said.

"ZF's strengths lie in synchronized heavy-duty transmissions and automatic and manual transmissions for light trucks. Dana's lie in synchronized medium-duty and non-synchronized heavy-duty transmissions," he said.

"Dana gains access to a first-class product line which meshes nicely with our existing products — basically without duplication — and the ability to manufacture our products in Brazil and on the European continent where our customers want them produced.

"ZF gains a marketing and manufacturing position in North America and the United Kingdom which will benefit that company," Mitchell said.

• Mitchell pointed to international ownership of several truck makers which are Dana and ZF customers. He mentioned Renault and Mack, Volvo and White, Mercedes and Freightliner.

He said International Harvester, General Motors and Iveco are developing international marketing strategies.

Dana facilities included in the deal are in Toledo; Jonesboro, Ark.; Knoxville, Tenn., and Wolverhampton, England. ZF's include those in Freidrichshafen and Sorocada, Brazil.

Dana said approval by several government agencies in the countries involved is required as is further negotiation of a definitive agreement between the two companies.

'84-model Jeep sales exceed full '83 total

SOUTHFIELD, Mich. — American Motors said last week that Jeep sales for the first 6½ months of the '84 model year surpassed the total for the entire '83 model year.

The company said that model-year sales through April 20 totaled 70,756, compared with 69,738 for the full '83 model year.

Dealers snap up Maratonas

In its first try at a U.S.-modified version of the GTV-6 coupe, Alfa Romeo North America scored a sellout: All 150 Maratonas were sold during recent dealer business meetings. Here, Lee Hjelsand, dealer in Belmar, N. J., hands his order form to Sales Director Joseph E. Cooley Jr. New York-New Jersey District Sales Manager William Allan looks on. The Maratona, featuring special aluminum wheels and U.S.-made plastic spoiler and hood, is $21,750.

Ford 2nd-quarter profit sets second record in row

By Kathleen Hamilton
Financial Editor

Ford Motor Co. set its second straight quarterly profits record by announcing first quarter profits of $897.2 million ($4.90 a share).

It was four times the 1983 first-quarter net income of $211.2 million, and a significant improvement over the old record, set in the final quarter of 1983, of $781 million.

Sales also set a record for any quarter: $13.01 billion, up 30 percent from the year-earlier $10.04 billion. The old sales record was $12.58 billion, set in the first quarter of 1979.

Unit sales rose 25 percent above the year-earlier total of 1.14 million cars and trucks to 1.42 million.

Ford's U.S. unit sales rose 44 percent to 816,603; outside the U.S., unit sales were up 6 percent.

Ford turned from a net payer of interest to a net receiver during the year. Last quarter, it received $41.2 million more than it spent on interest; one year earlier, its payments exceeded interest income by $42.5 million.

Its cash balance more than doubled, from $1.67 billion at the end of the first quarter of 1983 to $4.35 billion at the end of the most recent quarter.

Ford said its profit outside the U.S. more than doubled, from $100 million to $214 million. The turnaround is good news for Ford, because its foreign operations had been less profitable last year than in 1982.

Top sales post at Toyota goes to McCurry

TORRANCE, Calif. — Toyota Motor Sales, USA, Inc., has named Robert B. McCurry, 60, to the new position of group vice president — sales, marketing and distribution.

Robert B. McCurry

McCurry had served as general manager of Toyota's Los Angeles region since Jan. 1, 1982.

Prior to joining Toyota, he spent 28 years as a sales executive with Chrysler Corp. He was group vice president in charge of North American sales, parts and service when he left Chrysler in 1978.

After his departure from Chrysler, he became general manager of Mid-Atlantic Toyota Distributors, Inc., a privately owned Toyota distributorship serving five states and the District of Columbia.

McCurry's appointment is one of several executive assignments and organizational changes which become effective tomorrow (May 1).

Max Jamiesson, 51, formerly vice president, division manager in the sales department, has elected to take early retirement from Toyota.

Harold A. Bracken was named to fill the new position of group vice president, parts and service. Bracken, who was previously group vice president, sales and distribution, has been with Toyota since 1972. Prior to that, he was with Gulf States Toyota, a private Toyota distributorship in Houston, and with Ford Motor Co.

McCurry and Bracken will report to TMS/USA President Yukiyasu Togo.

New positions and executives reporting to McCurry are:

Robert A. McMillan, vice president, sales — Toyota Motor Distributors, who will oversee the nine Toyota regions. His previous position was vice president, distributor operations.

Hiroshi Imai, vice president, sales — private distributors, is responsible for private distributor operations. He previously was vice president, sales coordination.

C. Bruce Campbell, corporate manager — Vehicle Processors, Inc., formerly corporate parts manager, is responsible for VPI, a subsidiary of TMS/USA which operates automotive processing facilities.

• Also reporting to McCurry are Warren E. Christell, vice president marketing; Alvin E. Hagen, vice president dealer development; E. Barney Brogan, corporate public affairs manager, and James E. Press, corporate distribution and planning manager.

New positions and executives in the parts and service departments reporting to Bracken are:

Robert W. Schrandt, corporate customer relations manager, formerly corporate service manager.

Robert E. Bennett, corporate service manager, formerly national technical services manager.

Richard J. Gallio, corporate

Domestic cars strong, up 33 pct.

January registrations climb 25 pct.

By Jenny L. King
Staff Writer

New-car registrations in January showed a considerable gain over the preceding three years and came within a few thousand units of 1980 and 1979 levels.

According to figures compiled by R. L. Polk & Co., 747,231 new domestic and imported cars were registered in 48 states, with manufacturers' sales records supplying numbers for Oklahoma and New York.

The total was up 25.52 percent from 595,294 in January of 1983 and was the best for the month since the 749,305 recorded in 1980. In 1979, the January total was 753,884.

Domestic registrations the first month of this year were up 33.46 percent over 1983, climbing to 552,284 from 413,813. Imports, up 7.42 percent from 1983, dropped 4.40 percentage points in market share, falling to 26.09 percent from 30.49 percent last year. This year's registrations were 194,947 compared with 181,481 in January, 1983.

For the month, the Big Three improved their share of the total, while American Motors, the imports and miscellaneous domestics lost stature.

GM was up 1.67 percentage points, to 43.26 percent from 41.59 percent last year. Ford picked up an additional 2.23 percentage points, climbing to 19.34 percent from 17.11 percent, and Chrysler was up 0.87 percentage points, to 9.07 percent from 8.20 percent.

In addition to the imports' 4.40 - percentage - point drop in January, AMC was down 0.34

C-P extending cut-price offer on child safety seats

DETROIT. — Chrysler-Plymouth is extending its "Handle With Care" child safety seat program, which provides consumers with an opportunity to save on the purchase of a child seat.

It has been extended through July 31, 1984. The original deadline was April 30.

The three seats are: The "Infant Love Seat" for children (from birth to 20 pounds), the Century 200 "Safety Car Seat" (birth to 43 pounds) and the "Safe-T-Rider II" (up to age 10 or 65 pounds).

C-P said 42 states have laws requiring the use of child restraints and/or safety belts for young passengers.

Total is 232,156, highest since 1979

Mid-April car sales rise 22 pct.

By Jenny L. King
Staff Writer

The domestic industry's 22.08-percent sales increase in mid-April brought to 11 the number of consecutive reporting periods in which sales have been up this calendar year.

It was the best April 11-20 total for the home team since 1979 and was more than 40,000 units ahead of the 190,163 retail deliveries a year ago.

The six major domestic auto makers joined forces to sell 232,156 new cars, best for the period since the 246,203 sold in 1979.

Year-to-date sales through April 20 were up 34.97 percent, to 2,437,160 from 1,805,760 last year.

General Motors' 26.48-percent mid-month increase was the largest gain among the Big Three, and Honda, up more than threefold, paced the Little Three. GM reported sales of 143,743 passenger cars, up 30,000 units from 113,651 last year. Honda was up 286.13 percent, to 3,089 from an estimated 800 units a year earlier.

Ford Motor Co. sales of 49,891 were up 18.55 percent from 42,084. Chrysler Corp. reported a 13.40-percent increase, climbing to 28,253 from 24,914. American Motors estimated sales of 5,265 were down 20.23 percent from the year-ago 6,600. Volkswagen reported sales of 1,915 U. S. Rabbits, down 9.58 percent from 2,114.

• GM's share of the market increased to 61.92 percent from 59.77 percent during the period. Ford slipped to 21.49 percent from 22.13 percent. Chrysler was down to 12.17 percent from 13.10 percent. AMC dropped to 2.27 percent from 3.47 percent, VW had 0.82 percent compared with 1.11 percent and Honda grew to 1.33 percent from 0.42 percent.

Among the domestic makes, only AMC and VW were down for April 11-20. AMC plunged 75.00 percent, to 500 from 2,000 last year, and VW was off 9.58 percent, to 1,915 from 2,114.

Plymouth was up 6.37 percent, Chrysler was up 14.74 percent and Dodge was up 19.73 percent. Ford climbed 9.23 percent, Mercury was up 41.92 percent and Lincoln was up 24.24 percent.

At GM, Chevrolet was up 12.86 percent, Buick was up 16.75 percent, Cadillac was up 20.20 percent, Pontiac was up 44.77 percent and Oldsmobile shot up 51.47 percent.

With nine selling days this year and last, the daily rate reflected the totals' comparison: Up 22.08 percent, to 25,795 from 21,130.

Oldsmobile's Cutlass Supreme was the top-selling nameplate for the period with 11,865 units to its credit. Second was Chevrolet Cavalier at 11,706, followed by Chevrolet Celebrity at 10,188, Oldsmobile 88 at 9,278 and Cutlass Ciera at 8,402.

New officers in Eastern Ohio

Fred Martin, second from right, Fred Martin Ford, Austintown, has been named president of the Automobile Dealers Assn. of Eastern Ohio. Passing the gavel to Martin is Bob Eddy, Austintown Chrysler-Plymouth, past president. Serving as officers with Martin are Jack Brownlee, left, Brownlee Pontiac-Subaru, Youngstown, and Robert Sainato, Sainato Motors, Warren, vice president.

AMC makes it two straight with profit for 1st quarter

By Kathleen Hamilton
Financial Editor

American Motors reported a profit of $5.12 million (3 cents a share) for the first quarter, making it two straight quarters of black ink after 14 of red.

The showing was a $71 million turnaround from the 1983 first-quarter loss of $66.08 million ($1.21 a share). And in 1983, AMC still owned its profitable AM General defense subsidiary. So the turnaround in the auto and Jeep sectors was even bigger: $91.58 million.

Sales of $1.08 billion set a record for the quarter for auto and Jeep operations. The old record was $681.65 million, set in the first quarter of 1980. But AMC made only $1.30 million then — about a quarter of its most recent net income total.

AMC paid virtually no taxes for the quarter. It would have paid $3.4 million if it hadn't earned tax credits with its three years of losses. AMC has about $300 million worth of credits and tax-loss-carryforwards left, said Finance Vice President Jean-Marc Lepeu.

Strong Jeep sales were credited for much of the profit.

Unit sales rose 46 percent, from 77,782 to 113,487. Gains were registered in both autos (up 5 percent) and Jeeps (up 206 percent).

AMC Chairman Paul Tippett said the company expects to be profitable this year, although it could slip into the red for a quarter.

AMC's net income is after it expensed out $1.7 million in profit sharing for the employe investment fund. That is a payment toward the $120 million to $150 million in loans and interest payments that AMC expects to be repaying to its employes over a three-year period.

Toyota boosts U.S. car prices average of $310

TORRANCE, Calif. — Toyota Motor Sales has increased U. S. car prices an average of $310, or 3.4 percent. The company attributed the hike to the strengthening of the Japanese yen against the dollar.

Truck prices went up an average of $50, or 0.6 percent, and there was no increase on Standard and Deluxe series trucks with two-wheel drive and manual transmission.

Toyota said the combined car-truck boost averaged $233, or 2.7 percent.

Increases ranged from $150 on the Tercel SR-5 three-door Liftback to $464 on the Cressida four-door sedan and wagon and $470 on the LE Van.

By series, the hikes were: Tercel, $175 or 2.6 percent; Corolla, $276 or 3.9 percent; Celica, $352 or 3.7 percent; Camry, $377 or 4 percent; Supra, $364 or 2.3 percent, and Cressida, $464 or 3.3 percent.

GM Canada donates 'popemobile' parts

OTTAWA. — General Motors of Canada is donating the engines and chassis of two heavy-duty pickup trucks which will be modified to serve as transportation for Pope John Paul II during his visit to Canada Sept. 9-12.

The popemobile will feature protective canopies made of clear plastic laminate.

News roundup

Saab recalls 8,000 cars

ORANGE, Conn.—Saab-Scania of America is recalling mid-1983 Saab 900, 900S and Turbo models because an electrical cable between the alternator and the starter motor may rub against the brake line. Damage to the cable's insulation could cause a short circuit and possibly a fire.

Volvo to launch spending program

GOTEBORG, Sweden. — A $2.5-billion investment program has been announced by Volvo. About half the funds will be spent on product and about half on new facilities, which will have the effect of increasing capacity by 10 percent. The program runs through 1989. "This is easily the company's largest investment program ever," said Roger Holtback, president of Volvo Car Corp. Volvo plans to finance the program itself.

Taiwan begins auto export

TAIPEI, Taiwan.—Hue Loong Motor Co. has exported 100 Sunny 303 sedans to the Dominican Republic. It is Taiwan's first volume export order for passenger cars, although it has exported small numbers of light trucks in the past. Hue Loong is a Nissan licensee.

Saab to build a 900 cabriolet

NYKOPING, Sweden.—The board of Saab Car Division has approved production plans for the cabriolet version of the 900 series. The car will be made from the end of 1985 at the Finnish Unsikakupunki factory on the two-door chassis. The factory already produces the special long-wheelbase 900 known as CD.

Isuzu R-car allotment increased

WHITTIER, Calif.—Isuzu, Ltd., has increased by 20 percent the number of vehicles American Isuzu will be able to sell under the fourth year of VRA (voluntary restraint agreement). Isuzu, which will be allowed to export 49,500 vehicles by MITI, has increased the U. S. subsidiary's volume from 16,800 to 20,000 vehicles. The balance, 29,500, will be marketed by General Motors, which will sell the new R-car though Chevrolet dealers under the Spectrum nameplate.

60 Detroit-area dealers subpenaed in FTC probe

By Richard Johnson
Staff Writer

An estimated 60 Detroit-area auto dealers were subpenaed last week in connection with an FTC investigation of possible anti-trust violations by retailers in the region.

The federal agency's Bureau of Competition issued subpenas seeking information concerning business hours, leasing and sales policies, tradein payments and labor rates charged by dealers for repair and servicing of motor vehicles.

FTC spokesmen have refused to confirm or deny whether an investigation is underway in Detroit or anywhere in the U. S. A NADA spokesman last week said she was unaware of any similar FTC activity elsewhere in the nation.

The subpenas were sent to dealers in Wayne, Oakland and Macomb counties in the Detroit metropolitan area, where most sales outlets have for the past several years stuck to a sometimes controversial practice of closing on weekends and most evenings.

The subpenas order dealers to produce any documents or communications with other dealers regarding business hours. Federal investigators are also probing for company records which may reflect whether dealers have jointly set values for new and used cars, tradeins, leasing and service labor. The FTC is seeking all related documents and materials dating back to 1965.

Local dealers have said the standard practice of closing on Saturdays and Sundays, and staying open late on only Mondays and Thursdays evolved over the years. Dealers have consistently denied that the uniform Detroit-area business hours result from an express agreement or any manner of collusion.

The subpenaed dealers have been ordered to testify before Bureau of Competition staff at hearings to be held in Detroit beginning in May. Carl Hevener, senior attorney in the Bureau of Competition's Office of Evaluation in Washington, said staff hearings conducted during such inquiries are closed sessions.

Daniel Hayes, Detroit Auto Dealers Assn. executive vice president, was unavailable for comment late last week. A spokeswoman for the Michigan Automobile Dealers Assn. said the organization had not been officially notified of the subpenas.

One lap winners

DARIEN, Conn. — The winning vehicle in the One Lap of America endurance run that began here and ended here one week and 8,800 miles later, was a 1984 Chevrolet Caprice wagon. It was driven by Team Holstein, three men from Warren, Vt.

Despite volume rise, January registrations show

Import penetration falls to 26 pct.

By Jenny L. King
Staff Writer

Imports dropped to 26.09 percent of total new-car registrations in January, 1984, down from 30.49 percent a year earlier.

Total new imports registered the first month of this year were 194,947, according to figures compiled by R. L. Polk & Co. That number was up 7.42 percent from 181,481 in the same month of 1983. But the overall strength of the market, paced by healthy domestic new-car sales, forced the imports to accept a smaller piece of the total pie.

For the month, five of the top 10 imports increased their share of the import-only segment and five lost ground.

Most noticeable gain was Honda's 3.75 - percentage - point increase. Honda moved into second place after Toyota and grew to 19.29 percent from 15.54 percent a year earlier. Honda figures include both imported models and Accords built and sold in the U. S.

Volkswagen, which also includes imports and domestics, climbed 0.43 percentage points over a year's time. Volvo was up 0.19 percentage points, Mercedes-Benz was up 0.25 percentage points, and Audi gained 0.59 percentage points.

• Toyota dropped 2.73 percentage points, to 21.01 percent from 23.74 percent. Nissan was off 2.68 percentage points; Mazda dropped 0.78 percentage points; Subaru was down 0.04 percentage points, and BMW lost 0.29 percentage points.

The top 10 imports claimed 88.92 percent of the import total this January, down from 90.29 percent a year earlier.

Japan's share of the import market dropped to 73.24 percent from 78.39 percent. West Germany was up to 12.29 percent from 11.26 percent. The U. S. cars which Polk counts as imports more than doubled to 7.49 percent from 3.58 percent, and Swedish imports were up to 4.74 percent from 4.27 percent.

Numbers of imports by country of origin in January for both years were:

	Jan., 1984	Jan., 1983
Japan	142,777	142,272
West Germany	23,956	20,438
United States	14,593	6,502

Sporty Sigma for Australia

Mitsubishi Australia's sporty Sigma GSR sedan has a large front air dam, charcoal bar grille and full-width air spoiler at the rear.

Reuss says GM's courting its dissatisfied customers

By Roger Rowand
Engineering Editor

SOUTHFIELD, Mich. — For every customer who complains about a problem, there are 26 with problems who don't complain through retail channels.

Those who don't tell their retailers about their complaints do tell their friends, neighbors and relatives. They wreak havoc for whoever manufactured and sold the product in question.

General Motors wants to reach its dissatisfied and vocal new-car customers and turn them around, said Lloyd Reuss, vice president and group executive, Chevrolet-Pontiac-GM of Canada group. He spoke at the annual Automotive / Petroleum Industry Forum meeting of the American Petroleum Institute here.

"We have to find them. We have to actually solicit complaints," Reuss said.

Referring to service data, Reuss said: "Of those who do complain, we're able to satisfy about 70 percent.

"If we're able to do a good job of satisfying them the first time, we not only win them as customers but they tell their friends, neighbors and other people about their satisfactory experience. It's very important."

That 70 percent figure arises from studies of business in general, not only the auto business.

He said in the auto industry the most influential data base used by new-car buyers is composed of friends and relatives, not advertising.

"Word of mouth is still far and away the most powerful advertising we can get," Reuss said. "We're trying to make it easier to complain, fix those complaints the first time, and depend on that word of mouth to get around."

Pa. law requires local governments to 'buy American'

HARRISBURG, Pa. — Gov. Richard Thornburgh has signed legislation requiring the state and local governments in Pennsylvania to buy American-made or assembled cars and trucks.

State Senator Clarence Bell, Delaware County Republican, sponsor of the proposal, said the new law would mean more jobs for American auto and steel workers.

The legislation, which becomes effective in June, also applies to motorcycles, tractors and earthmoving equipment.

If the vehicles are assembled in this country, a majority of the parts must be American-made.

A qualification in the new law provides that foreign-made cars may be purchased only if the cost of American-made vehicles is "unreasonable."

Campaigning to lead 4-cylinder market

Mitsubishi Australia revises Sigma

SYDNEY, Australia. — Mitsubishi Australia has launched an aggressive campaign to regain its position as leader of the four-cylinder market.

The recovery plan involves a national sales headquarters located in Melbourne instead of at the company's plant in Adelaide. A fresh onslaught on the fleet market will be made and a range of new passenger vehicles launched.

The latter includes a revised version of the locally made Sigma range, an imported turbocharged Cordia coupe and three new models to be announced before midyear.

Mitsubishi has sold 240,000 Sigmas in Australia since the launch of the GE in 1977. This makes it one of the most successful four-cylinder cars ever in Australia. But sales have recently slowed sharply, following the introduction of front-drive rivals from Ford and General Motors Holden's.

Mitsubishi Australia has been disappointed with sales of the Lonsdale version exported to the UK but said that a greatly enlarged dealer network will rectify matters this year.

According to sales chief Doug Coleman, Mitsubishi will sell around 69,000 vehicles in Australia this year, enough to ensure 12 percent of the market.

Coleman acknowledged that Sigma is no longer the top-selling four-cylinder car and fielded questions about the forthcoming locally made front-drive version. Industry sources say that it is at least 12 months away.

Coleman's marketing strategy is based heavily on the popularity of the optional 2.6-liter engine now fitted in 60 percent of new Sigma sedans and wagons.

The optional engine has been a trump card for the company, being very popular with owners who use the car for towing. Mitsubishi remains the only car on the market offering buyers a choice of 1.6, 2.0 and 2.6-liter engines.

Coleman said he expects to gain a bigger share of the fleet market thanks to more suitable specifications and the popularity of the 2.6 engine for business use.

The new-look GK range is substantially the same car as before, with a significant improvement in sound insulation and better seats. Carburetor and ignition changes improve fuel economy and reduce the hot-start problems experienced by some owners.

The new range, which is on sale now, consists of sedans and wagons in four levels of trim. Central door locking has been added to the option list.

The sporty GSR is the most distinctive model in the group and has a large air dam in the front, charcoal bar grille and full-width air spoiler at the rear. Larger (15-inch) alloy road wheels are fitted with low profile steel-belted tires.

An extended drive over a variety of road conditions confirmed that Sigma remains the quietest four-cylinder car available.

The general road manners are almost unchanged, apart from "taller" gearing for the GSR (because of the larger wheels) and a less direct axle ratio for the automatic 2.0 model.

Mitsubishi Australia executives are confident that sufficient changes have been made to give Sigma a new lease on life. They say it will account for 40 percent of Mitsubishi sales this year.

Brock designing '85 sports car for Custom Coach

PASADENA, Calif.—Designer Peter Brock has signed with California Custom Coach here on a new high-performance sports-car project, according to Cecil Gold, California Custom Coach president.

Brock and Gold are heading a team that is designing a front-engined two-seater.

The prototype of this limited-production automobile is slated to preview early this summer with introduction as an '85 model, Gold said. The price will be between $25,000 and $27,000.

Brock directed several projects for Shelby American from 1962 to 1967. He was primarily responsible for the development of the Shelby Daytona Cobra Coupe.

Mendenhall school expands facilities

HIGH POINT, N. C. — A 7,200-square-foot addition has been completed at the Mendenhall School of Auctioneering here. This brings the total training area to 17,000 square feet.

Also added was an audio-visual video cassette system with studio video camera and monitor. The school conducts four classes each year. They are held the first two weeks in February, May, August and November.

Domestic cars strong, up 33 pct.

January registrations climb 25 pct.

Continued from Page 4

percentage points, to 2.24 percent from 2.58 percent, and miscellaneous domestics were completely erased, down to 0.00 percent of the market from 0.03 percent. Only 27 miscellaneous domestics were registered in the month.

• The lineup of 12 domestic makes remained unchanged January to January with two exceptions: AMC dropped to 11th place from ninth, and Chrysler moved from number 11 to number nine.

In the domestics-only market, Ford and Chrysler increased their shares at the expense of the competition. Ford was up to 26.17 percent from 24.61 percent, and Chrysler edged up to 12.27 percent from 11.80 percent. GM dropped to 58.53 percent from 59.83 percent; AMC was down to 3.03 percent from 3.72 percent, and miscellaneous makes slipped to 0.00 percent from 0.04 percent a year earlier.

The size-class categorizing showed imports holding onto the largest single share of the market, 26.09 percent, followed closely by U.S. intermediates at 25.84 percent. Compacts had 17.49 percent, subcompacts had 12.93 percent, standards had 9.19 percent and luxury models claimed 8.46 percent.

A year earlier, imports represented 30.49 percent of the market, intermediates had 24.41 percent, compacts had 16.12 percent, standards had 12.22 percent, subcompacts had 11.23 percent and luxuries had 5.53 percent.

Excluding imports, the January market-class segments were: Intermediates at 34.97 percent, compacts at 23.65 percent, subcompacts at 17.50 percent, standards at 12.43 percent and luxury cars at 11.45 percent.

Twelve months earlier, intermediates accounted for 35.11 percent of the total, compacts had 23.19 percent, standards had 17.59 percent, subcompacts had 16.16 percent and luxuries had 7.95 percent.

A Scrambler and a scrambler

The Jeep Dealers Assn. of Dallas/Fort Worth provided a Jeep Scrambler as the official press vehicle and pace car for the St. Paul's Hospital/Prestonwood 10K race. Pictured with the vehicle is race winner Bill Rodgers.

Subaru builds new facility in Cherry Hill, N.J.

CHERRY HILL, N. J. — Subaru of America is constructing a new corporate headquarters here.

Harvey H. Lamm, president and chief executive officer of the firm, said, "We're staying in the neighborhood — where we have established our roots and where our employe loyalty has grown strong."

The new headquarters will be about two miles from the current Subaru headquarters in Pennsauken.

The seven-story office building will be located on a 12-acre plot. The new facility will provide 115,000 square feet of office space, including a conference center.

It is designed for an eventual accommodation of more than 500 people, but about 350 Subaru employes are expected to occupy the building when it is completed in the fall of 1985.

Dealer bringing complaint against Toyota distributor

RALEIGH, N.C.—Richard J. Goodman, president of Goodman Toyota, Inc., here, is accusing Southeast Toyota Distributors, Inc., Deerfield Beach, Fla., of violating the law by not giving the dealership enough new cars to sell.

The law that Goodman referred to was enacted last year by the State Legislature and requires distributors to deliver cars "in reasonable quantities relative to the dealer's facilities and sales potential in the dealer's relevant market area."

Goodman said that he would take his complaint to the North Carolina Division of Motor Vehicles.

Collector car auction slated for San Diego

MISSION VALLEY, Calif. — Rick Cole will host the fifth San Diego Collector Car Auction at the Scottish Rite Center here, May 5 and 6.

More than 300 collector automobiles will hit the auction block, including a selection of movie and TV vehicles from a private collection.

Makers produce 171,242 cars for week

16 assembly plants work overtime

By Joe Wilssens
Staff Writer

Domestic auto makers scheduled overtime at 16 assembly facilities last week and saw production bounce back following the prior week's Good Friday-shortened build.

U. S. auto manufacturers slated completion of 171,242 cars last week, 35.14 percent above the previous week's 126,712 and up 25.60 percent from last year's 136,340.

So far this year the U. S. auto makers have built 2,822,648 cars, up 38.25 percent from the 2,041,781 built in the comparable period last year.

Breakdown by company last week was: General Motors, 35.81 percent; Ford Motor Co., 24.45 percent; Chrysler Corp., 16.76 percent; Honda Motor Co., 1.61 percent, and Volkswagen of America, 1.37 percent.

American Motors had no production last week because its Kenosha facility, source of Alliance and Encore, was closed for inventory adjustment. The plant is scheduled to reopen today (April 30).

Ford worked overtime at four plants last Saturday: Atlanta, Kansas City, Wayne and Wixom. Atlanta builds the LTD, Marquis and Thunderbird. Kansas City produces Tempo and Topaz, while Wayne assembles Escort, Lynx and EXP. Wixom builds Lincoln, Mark VII and Continental.

Chrysler worked daily nine-hour shifts at Belvidere, Newark and St. Louis No. 1 and No. 2. Jefferson worked daily 8½ hour shifts. All four plants worked last Saturday. Belvidere builds Omni, Horizon, Charger and Turismo: St. Louis assembles Daytona, Laser, Aries, Reliant, LeBaron, Dodge 600, Diplomat, Gran Fury and Fifth Avenue. Newark assembles Aries, Reliant and LeBaron wagon. Jefferson builds Aries, Reliant, LeBaron, Dodge 600, Chrysler E-Class, New Yorker and Caravelle.

Belvidere, Newark, St. Louis and Jefferson will work the same daily overtime shifts this week, but only Belvidere will work this Saturday.

GM worked last Saturday at eight plants — two shifts at Oklahoma City, Lordstown, Framingham, Doraville, Arlington, Cadillac-Detroit and Flint. Van Nuys will work overtime on one shift.

Oklahoma City builds Century and Celebrity; Lordstown, Cavalier and Pontiac 2000; Framingham, Celebrity and Cutlass Ciera; Doraville, Cutlass Ciera and Century; Arlington, Monte Carlo, Cutlass Supreme, and Detroit, Cadillac and Olds 68. Flint builds the LeSabre, Caprice, Impala and Regal, and Van Nuys assembles Camaro and Firebird.

GM's Flint plant built its final rear-wheel-drive Buick Electra last Tuesday (April 24).

Japan's Nippon Kokan to buy 50 percent of National Steel

PITTSBURGH.—National Intergroup, Inc., parent of National Steel Corp., is selling half of National Steel to Nippon Kokan, of Japan.

National Steel is a major supplier of automotive steel through its subsidiary, Great Lakes Steel, Ecorse, Mich.

A joint venture, agreed upon in principle, will be formed with payment of $273 million in cash and $19 million in notes to National by Nippon Kokan.

The Japanese firm was a member of a Mitsubishi-led coalition of Japanese firms which tried unsuccessfully to acquire Ford Motor Co.'s Rouge steel works in 1982.

That deal fell through because the Japanese group objected to the stance of the UAW steelworkers at the plant, it said.

Things may be different at National Steel where the United Steelworkers union represents some 8,000 at the two plants.

Union President Lynn R. Williams said he had assurances no steelworker's employment will be adversely affected by the sale. He said the union soon will enter discussions with National Intergroup and Nippon Kokan, which he called Japan's second largest steel producer.

In addition to Great Lakes, the partnership will include Midwest Steel, Granite City Steel and Hanna Mining Co.

Truck production tops a million, 49 pct. above '83

Domestic truck production topped the one million mark last week as assembly levels returned to normal following the Good Friday holiday the previous week.

The makers hit the one million build Tuesday (April 24), seven weeks earlier than the milestone was reached in 1983. So far this year, 1,045,502 have been completed, 49.09 percent more than the 701,274 built at this time in 1983.

Truck manufacturers targeted production of 64,113 trucks last week, 32.39 percent better than 48,466 completed during the prior week's holiday-shortened schedule. The tally was 30.02 percent above the year-ago week's 49,309.

Ford Motor Co. scheduled Saturday (April 28) overtime at its Kansas City and Twin Cities (Minn.) facilities.

General Motors scheduled Saturday overtime at Detroit, Lordstown (O.), Pontiac No. 6 and St. Louis.

At Chrysler, the Warren (Mich.) facility worked two 8-hour daily shifts last week.

Canadian makers 15 pct. above '83 in car production

Canadian auto production returned to normal levels last week despite a lack of action at American Motors. The Good Friday holiday had shortened work schedules and decreased output the previous week.

Canadian auto makers slated production of 23,606 cars last week, 25.80 percent more than the prior week's 18,765. The total was 6.96 percent lower than the 25,373 assembled in the year-ago week.

To date this year, the manufacturers have completed 376,270 autos, 15.53 percent better than the 1983 total of 325,698 at this point.

AMC did not schedule production at its Brampton (Ont.) facility last week to reduce inventories.

Truck assembly last week was targeted at 17,818, up 37.15 percent from the 12,992 trucks built the previous week. The total was 47.54 percent above the year-ago week's 12,077.

So far this year, truck production has climbed to 281,183 units, a 66.71 percent improvement over the 168,670 trucks which were assembled at this time in 1983.

Chrysler Corp. estimated production of 2,370 Dodge Caravans, 2,190 Plymouth Voyagers and 912 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 74,859.

Brock touches off a furor on quota; panic subsides

The storm created in Washington last week by U. S. Trade Representative William E. Brock's call for an end to Japanese auto quotas in response to big bonuses for U. S. auto executives, had abated somewhat by week's end.

Vice President George Bush toned down Brock's strong statement, made early in the week, by saying there has been no official Reagan Administration decision on whether to press Japan for an extension of the "voluntary" quotas.

In Detroit, auto makers and the UAW lined up as would be expected, both on the issue of bonuses and on quotas.

In New York, auto analysts predicted the Japanese share of the U. S. market would rise, but probably to no higher than 30 percent, if quotas were lifted.

The only surprising responses came from the import industry: Despite the profits realized by import-car dealers under quotas, a spokesman for their association called for an end to the quotas.

Honda of America — which could surge ahead of other Japanese makers in the U. S. under quotas because it is the only one with U. S. car manufacturing capability — reiterated its free-trade stance.

And Subaru of America — which, along with the other smaller Japanese importers, is suffering disproportionally under quotas—said it is basing its planning on continuation of the quotas.

• Brock told the Washington Post last week the Administration's reluctance to extend the quotas is "a mile wide and a mile deep." When pressed, Brock told reporters he was not speaking for the President directly, but that he knew of no one in the White House who would disagree with him.

Indeed, Commerce Secretary Malcolm Baldrige and Chief White House Economic Advisor Martin Feldstein both have called for an end to the Voluntary Restraint Agreement (VRA) when it expires next March 31.

UAW President Owen Bieber asked to meet with Vice President Bush before he leaves for trade talks with Japan next month. Bush said he cannot meet with Bieber but offered a meeting with his staff.

In a Washington press conference, Bush said he will not tell the Japanese the U. S. expects the VRA to end next year.

But Trade Representative Brock called the restrictions an "embarrassment" to the U. S. He said their continuation cannot be justified after the recent disclosure of "unbelievable new management bonuses."

The bonuses will increase the costs of U. S.-made cars, he said.

With "U. S. cars already costing $1,500 to $2,000 over the competition's cost of production, then the industry will be in here saying, 'We need another four or five years of protection,'" he said. "It's hard not to feel a little bit 'had' at this point."

• Michigan Senator Donald Riegle, a Democrat, said Brock's proposal to end the quotas would push the U. S. toward recession in 1985 and worsen the U. S. trade deficit.

"If Japanese car penetration goes from 23 percent to 40 percent, over one million additional American workers will lose their jobs," he said.

Riegle cautioned both management and labor that if they do not temper their compensation demands, "a national climate will be created where those of us who are fighting to help the industry and the workers will increasingly find our arguments falling on deaf ears."

The "voluntary" quotas were imposed by the Japanese government more than three years ago under pressure from the U. S. The original three-year agreement called for an annual auto ceiling of 1.68 million. The agreement was extended to a

Pared-down Riviera

The 1986 Buick Riviera, scheduled to be assembled at GM's Poletown facility in Detroit, retains its typical verticle-barred grille but otherwise is understated as it shrinks to a wheelbase of 108 inches from 114 inches and a length of 185 inches from the present 206.6 inches. Powerplant choices include cross-mounted gasoline or diesel V-6 engines.

NEW YORK. — On both the distribution and dealer levels, Porsche Cars of North America is rapidly building its organization to meet the Sept. 1 deadline when it will be marketing its cars in the U. S.

Several key elements have been taken care of, or are close to solution. Perhaps most importantly, in light of the controversial beginning of the company, dealer sales agreements have been mailed to the dealers who currently hold franchise agreements from Volkswagen of America and its distributors.

John A. Cook, president of Porsche America, stressed that the agreements went out 30 days ahead of the anticipated schedule. (See story on Page 8.)

Cook also outlined several other key elements under development in the chain of distribution.

1. He denied rumors that Porsche was negotiating with VW to resume distribution and also denied that the company was negotiating with any other auto importer to distribute in the U. S.

2. Sites have been selected for the Western and Eastern distribution centers and parts warehouses and construction will begin shortly. The site of the corporate headquarters has also been selected and offices leased.

3. Air freight of cars is being considered as a method of shipping product to the U. S. as an alternative to using cargo ships.

4. All top executives have been hired by the company though Cook would not reveal their names since some have not left their present positions with other companies.

5. Parts have been ordered from Germany to start service operations on the Sept. 1 start-up date.

• The distribution and parts warehouse sites are key to the operation and both are located at airports, Cook said.

In the West, Porsche America has purchased 15 acres at the Reno airport. This will serve as a storage, pre-delivery and parts warehousing site. A 20,000-square-foot pre-delivery center will be built along with a 100,000-square-foot parts building.

In the East, the company

New products rolling in under eased quota

Japanese set to flex muscle in U. S.

By Joseph Bohn
Marketing Editor

Importers of Japanese cars are busily refilling their supply pipelines and getting ready to flex their market muscle, as new products roll in under what may be their last year of voluntary restrictions.

For Toyota, more liberal quotas, which began in April, provide a chance to push its new 4Runner four-wheel-drive utility vehicle, at the same time a new Cargo Van is arriving in dealerships.

Honda figures it will get enough cars from Japan and Marysville, O., to set an industry record for the highest number of per-dealer car sales this year.

For Nissan, the allotments will give it a chance to beef up 200-SX and 300-ZX sales, and refocus its marketing attention toward cars, easing off a little on trucks.

Nissan's inventory dipped to 15 days' car supply at the end of March, the lowest it's ever been — but mid to late May should see dealers, particularly in the Midwest and East, begin restocking, said Chuck King, senior vice president and general manager of sales.

For Honda, the April 1-March 31 quota period should produce banner sales of over 500,000 cars. Honda's quota was upped to 372,000, and it expects another 140,000 out of Marysville.

The importer is currently signing up new dealers, but not as many as originally anticipated.

Rick Caille, manager of market representation, figures that Honda can get its sales job done with 875 to 900 dealers, rather than the original 1,000 it planned.

Projecting about 875 dealers by calendar year's end and 502,000 sales, Caille estimates that per-dealership sales will climb to 574 in 1984 which will eclipse the previous record 541 car sales per dealership set by Toyota in 1980.

Caille said Honda wants to keep dealership sales and profits high and feels it can increase volume and market share mostly through existing dealers.

Therefore, a minimum of new points are planned — some in metro markets and some in larger single-point markets, being established mostly for customer convenience.

In 1983, Honda averaged 494

breaking news

It's April '85 for Ford Aerostar minivan

DEARBORN. — Ford Motor Co.'s downsized van, the Aerostar, was due to go into production late this year. Things have slipped, however, and Job One rolls in early 1985. The company now is shooting for an April showroom date. Some of Ford's most substantial successes have gone on sale April 17.

New model rolled out in India

MADRAS, India.—Maruti Udyog, Ltd., has started production of a new small passenger car here in a joint venture with Suzuki. Suzuki reportedly has a 26-percent interest in the operation, with an option to increase this to 40 percent. Under the agreement, Maruti is licensed to build cars, vans, microbuses and light trucks with 800 to 1,000-cc engines. Production plans call for 20,000 cars in 1985, rising to 100,000 by 1988.

Combined total tops year ago by 17 pct.

Sales swell despite import setback

By Jenny L. King
Staff Writer

Everything was coming up roses for the domestic auto makers as April sales climbed 24.35 percent from their year-ago level.

Dandelions sprouted in the imports' garden, where the total was down 5.28 percent and market penetration shriveled to its smallest share in nearly five years.

Domestic sales totaled 721,091 in April, up 24.35 percent from 579,911 in 1983 and the best for April since 1979 when 763,702 new cars were delivered.

With 25 selling days this year compared with 26 in '83, the daily rate increase was even more impressive: Up 29.32 percent, to 28,844 from 22,304.

April import sales drooped 5.28 percent, to 174,311 from 184,034, carving out a 19.47-percent share of the month's total market. That was their lowest penetration since October, 1979, when their piece was 19.09 percent. Just a year ago, imports earned 24.03 percent; the record for April was 28.93 percent in 1981.

Total new-car sales reached 895,402, up 17.21 percent from 763,945 a year earlier.

Year-to-date domestic sales were up 33.32 percent, to 2,715,427 from 2,036,833. In the past four months, 763,292 new imports were delivered to customers, down 1.10 percent from 771,794 in 1983. Total sales were up 23.86 percent, to 3,478,719 from 2,808,627.

• Ford Motor Co. paced the domestic auto makers in April with its 39.88-percent sales increase. Ford, Mercury and Lincoln dealers combined efforts to deliver 164,055 cars, up some 47,000 units from 117,282 a year ago. General Motors was up 22.86 percent, to 435,908 from 354,804.

Chrysler Corp. reported sales of 86,924 passenger cars, up 10.94 percent from 78,355. American Motors slipped 23.54 percent, to 14,924 from 19,518. Volkswagen moved up 5.86 percent, to 7,119 from 6,725, and Honda surpassed VW and nudged AMC with its sales total of 12,161 U.S.-built Accords, up 276.85 percent from 3,227 a year earlier.

GM's share of the domestic market slipped to 60.45 percent from 61.18 percent in April. Ford climbed to 22.75 percent from 20.22 percent. Chrysler was off to 12.05 percent from 13.51 percent. AMC earned 2.07 percent, down from 3.37 percent. VW sales accounted for 0.99 percent, down from 1.16 percent, and Honda grabbed 1.69 percent, up substantially from just 0.56 percent its first year on the domestics charts.

Buick and Oldsmobile boasted record sales for April and all domestic makes save AMC were on the plus side. Buick was up 12.57 percent to a record 90,785 from 80,646 last year, and Oldsmobile's 102,105 was a best for April and an increase of 16.57 percent over 87,588 a year earlier.

Pontiac was up 54.26 percent, Chevrolet was up 23.41 percent and Cadillac was up 22.95 percent.

At Chrysler Corp., Dodge was up 15.55 percent, Chrysler was up 15.03 percent and Plymouth was up 2.87 percent, Ford Division was up 40.84 percent, Lincoln was up 53.39 percent and Mercury was up 34.39 percent.

AMC was off 76.62 percent, Renault was up 0.07 percent, VW was up 5.86 percent and Honda was up 276.85 percent.

The European importers were busy setting records of their own in April while the Japanese operations, confined by

RWD Electra finale

Bill Lamb, producer of Buick's Factory Whistle radio show, was at the end of the final assembly line when the last rear-wheel-drive Electra was built in Flint. After producing more than 2.6 million Electras since 1959, Buick will continue to assemble LeSabres and Regals in Flint until 1985, when renovations will be completed for production of a new full-size car at Buick City.

Industry optimistic that standards will be delayed

Makers win split in Clean Air battle

Continued from Page 2

the hazardous pollutant section. These are 0.26 particulates for '86 light trucks and 0.08 for '88 light trucks; for '89 model HDs 0.25, and by calendar 1987, a ban on lead in gasoline.

That section would also address ethylene dibromide and benzene in gasoline by mandating EPA standards.

Also up in the air is a Senate bill. Last March, the Senate Environment Committee, 16-2, reported a reauthorization bill for the Clean Air Act, which left current standards untouched, despite industry's pleas for a lessening of CO controls.

The bill does contain strong anti-tampering provisions — extending to individuals — and anti-fuel-switching provisions. An amendment for a ban on lead in gasoline was also expected when the bill got to the floor, although a separate bill exists and could possibly get attention.

• Now, however, the same stalemate that occurred in the last Congress has become a likely scenario once again — that is, the Senate ready to act but reluctant because of seemingly hopeless controversy in the House.

Actually, the real fight is over acid rain with its enormous political ramifications — Western states pitted against Eastern ones, the smokestacks of the former damaging lakes in the East and in Canada and the high sulfur coal of the East vying in price with scarcer low-sulfur coal.

Nitrogen oxides from trucks, although the industry maintains their contribution is miniscule, have some impact, thus their inclusion along with diesel particulate standards because of the connection between NOx and diesel particulates.

The Ruckelshaus lengthy waiver document spells out all industry and California Air Resources Board arguments over diesel particulates, and concludes with EPA supporting California.

For example, industry says trap oxidizers — regardless of their merits—will not be commercially available by '85 model year. Not so, says CARB.

One by one, Ruckelshaus goes through the company arguments about models companies may have to drop from the rich California market. If Daimler-Benz cannot sell diesels weighing over 3,500 pounds, it can still sell smaller diesels and larger gasoline-powered cars. Even if GM cannot sell 5.7-liter and 6.2-liter engine families, hurting it especially in the light-truck areas, these engines represent only one percent and 37 percent of GM car and light truck sales in the state.

GM has two other diesel engine families to use in meeting '85 state standards even though they cannot be used in GM's biggest cars. As for VW's claims that its largest displacement diesels will be knocked out of the market, six '83 and '84 model engine families meet both '85 NOx and particulate standards.

As for Ford's assertion that it would have to drop its two diesel car engines planned for '85 models for large cars and light trucks, EPA says Ford can still sell a diesel line of light-duty trucks and all but its heaviest diesel cars.

Other makers, including Nissan, Toyota, Mitsubishi, BMW and Peugeot, also filed complaints but EPA says all these (except BMW, which now has certification testing underway) have already certified one engine family capable of staying in the state market.

EPA also rejects arguments by makers and their associations that California should set separate standards for cars and small, medium, and big trucks.

As for the availability of trap oxidizers, Ruckelshaus notes, EPA already found there was enough leadtime for its proposed standards.

New type of headlamp gets tentative approval

WASHINGTON. — A new General Motors-designed sealed-beam headlamp system, tentatively endorsed by NHTSA, offers improvements in lighting, aim, vehicle weight and streamlined design and could serve as the standard for future headlamp systems, according to the agency.

NHTSA has granted the petitions of GM and American Motors and has started rule-making on the four-lamp rectangular headlamps, known collectively as Type F, which are about half the size of the smallest headlamps currently permitted by law.

The Type F headlamps "offer the prospect of improved fuel economy through lighter vehicle weight and more aerodynamic front-end design," the agency said in its rulemaking petition on the 92-mm-x-150mm lights.

GM believes the Type F headlamps offer better upper-beam aiming characteristics than current rectangular sealed-headlamps — conclusions in which NHTSA tentatively concurs after discussing the matter with GM.

"In reviewing the lighting improvements offered by GM such as common aiming/seating planes, reduced sensitivity to horizontal mis-aim and improved total light output with little or no increase in glare, the question arises whether such improvements should be required on future headlamp systems," NHTSA said.

Therefore, the agency in this rulemaking seeks comments not only on the Type F headlamps, but on all headlamp systems.

"In making such comments, segregation of such comments on this petition and on future headlighting would help expedite the review of both," NHTSA said.

The agency is soliciting comments on the rulemaking proposal until May 30.

Record sales, profits compared for quarter

By Kathleen Hamilton
Financial Editor

The domestic auto industry recorded its highest quarterly sales and profits totals ever and set quarterly highs in both columns for the fourth consecutive quarter.

Combined net income for the Big Four last quarter was $3.22 billion, up 232 percent from the $970 million made in the first quarter of 1983.

Sales rose only 37 percent year to year, to $41.89 billion from $30.66 billion.

General Motors, Ford Motor Co. and Chrysler Corp. set any-quarter profits and sales records. Sales for American Motors, at $1.08 billion, were only a first-quarter record. Its all-time high was $1.10 billion, set in the final quarter of 1983.

That final quarter of 1983 was when the previous all-quarter records were set for both sales and profits. Combined net income was $2.20 billion; sales, $39.09 billion.

Traditionally, the second quarter of the year is the strongest period for auto sales and profits, and there is no reason to doubt U.S. auto makers will report even better numbers for this quarter.

Last quarter's profit was nearly a $4 billion turnaround from the corresponding period of 1982, when the auto industry reported a combined net loss of $74 million. And that loss was considerably less than the first-quarter losses of 1980 and 1981: $457 million and $591 million.

BIG FOUR FIRST-QUARTER RESULTS
(In Millions)

	Profits (Loss) 1984	Profits (Loss) 1983	Sales 1984	Sales 1983
American Motors*	$ 5	($ 66)	$ 1,083	$ 782
Chrysler Corp.	706	172	4,915	3,100
Ford Motor Co.	897	211	13,009	10,036
General Motors	1,614	653	22,886	16,744
INDUSTRY TOTAL	$3,222	$970	$41,893	$30,662

*AMC figure includes sales of AM General, sold in September, 1983. If restated to eliminate AM General, 1983 sales would be $637 million and 1983 industry total would be $30.517 billion.

But panic subsides at week's end

Brock touches off furor on quotas

Continued from Page 1

fourth year, which began in March, but the ceiling was raised to 1.85 million cars.

The House sponsor of the UAW's domestic-content legislation, New York Democrat Richard L. Ottinger, said he favors scrapping the quota arrangement in favor of his content bill.

He said import penetration had increased from 16.5 percent in 1979 to 22 percent in 1983, and that Japanese penetration of the American car market would jump to 35 or 40 percent if quotas were lifted.

He also said the quotas have failed to bring about competitive small-car manufacturing in the U. S.

"The American companies are meeting Japanese competition by moving their production overseas," he said. "General Motors alone, in its bid to import 300,000 Isuzus and Suzukis, would jeopardize the jobs of 71,400 American workers."

The UAW said 200,000 jobs would be lost and the Japanese market share could rise to 40 percent if the VRA is dropped.

Both Ford Motor Co. and Chrysler Corp. have said that if GM is allowed to import small cars from Japan, they will begin moving small-car production offshore. Ford already has plans to produce small Mazdas in Mexico. That could mean 50 percent of the U. S.-sold cars could be produced offshore, Bieber said.

"If Brock's view prevails, they won't be punishing General Motors for their excessive executive pay—they will be rewarding them, by making it possible for GM to import small cars from Japan and export American jobs," he said.

He criticized U. S. auto makers for not using some of the bonus money to, instead, reduce car prices.

High bonuses at Ford and GM will make bargaining with them this summer tougher, Bieber said. He said he is still hopeful a strike can be avoided.

Expected record second-quarter profits will "underline the belief that it is time for substantial (wage) increases," he said.

• GM said executive pay was actually 6 percent below the 1978 level if inflation is considered. It argued that compensation should have no bearing on trade negotiations. Removal of quotas instead "should be tied to removal of the nontariff barriers which restrict access of American products to Japanese markets," GM said.

* Chrysler 1983 compensation figures incomplete. Stockholders will be asked to approve a bonus payment plan at annual meeting.

**Includes one-time payment equal to amount Bidwell forfeited from former employers by joining Chrysler.

NOTE: Compensation figures include salary, stock and cash bonuses awarded for 1983 and benefits listed in proxy statements. They do not include stock options, granted to all executives listed except for Ford officials. Income generated from the exercise of stock options or stock appreciation rights is not included.

Ford has invested $10 billion in machinery and $7 billion in R&D in the U. S. during the restraint period, Chairman Philip Caldwell said.

"It is surely too soon to give the game away," he said. "When the patient is just recovering from pneumonia, it doesn't make much sense to open the windows and let the cold air blow in."

The industry's problems aren't over, and they can't be solved by mediocre management, he said. Bonuses are necessary to attract and keep good management, he said.

Ford's bonus plan has been in effect 29 years, so the 1983 bonuses "were not a sudden raid on the company's treasury." They were simply the first bonuses in four years, because bonuses are paid only in profitable years, Caldwell said.

Chrysler shareholders have not yet approved a bonus plan for executives for 1983. But its executives have been the most outspoken on the need to continue quotas until taxation and currency barriers are lifted.

"We are surprised our chief trade negotiator would throw away a bargaining chip like the import restraints," Chrysler said. "That is no way to represent American interest abroad or at home."

American Motors refused to comment, saying it expects the debate to continue for another 11 months, when the quota agreement will expire.

Even if quotas are lifted, auto analyst Arthur Davis, of Prescott, Ball & Turben, expects the Japanese Government to closely monitor auto exports to the U. S., in effect maintaining an informal quota.

• The Japanese share will not shoot up suddenly because inventories have to be rebuilt and because of price competition from domestic small cars, he said.

Other analysts agreed. Thomas F. O'Grady, director of automotive services at Chase Econometrics, predicted an unrestrained market would find an import share of about 30 percent.

David Healy, of Drexel Burnham Lambert, said the Japanese share would be 23 to 24 percent, the total import share 29 to 30 percent. The market demand for larger cars will limit a Japanese surge, he said.

Robert McElwaine, president of the American International Automobile Dealers Assn., said that if the record profits, "exorbitant" bonuses and anticipated high wage demands are the result of the quotas, than the Administration should remove the limits now.

Meluzio is sole owner

YORK, Pa. — Don Meluzio has become sole owner of York Chrysler-Plymouth here. He invested in the dealership in 1980 under the Chrysler Marketing Investment Program.

Unhappy diesel owners unite, plan to give GM their terms

By Richard Johnson
Staff Writer

Four consumer groups that were formed to represent unhappy owners of General Motors diesel cars have united under one name and are preparing a letter to the corporation setting ground rules for future settlement negotiations.

The four groups are the Chicago-based General Motors Diesel Users Demanding Satisfaction (GM-DUDS), Lemon-On-Wheels from the New York area, the Seattle-based Consumers Against General Motors and Disgruntled Diesel Owners (D-DOG), of Virginia.

During a recent meeting in Reno, the organizations linked their efforts under the name GM Consumer Group, Intl. Buddy Finkelberg, head of GM-DUDS, said the association represents about 47,000 "card-carrying" members of the four regional groups and about 70,000 diesel owners who are in contact with the organizations.

"The intent is to share the wealth of knowledge we all have and give direction to one another," said Finkelberg. "The executives of each local group will serve on the board of directors."

Customer dissatisfaction stems from Oldsmobile's 5.7- liter, V-8 diesel engine installed in Oldsmobile, Cadillac, Chevrolet, Pontiac and Buick models from 1978 through 1981. Owners have alleged a variety of mechanical problems and filed numerous lawsuits against GM, including several class actions.

The four organizations are in various stages of negotiation with GM.

However, GM-DUDS recently broke off talks with the corporation, claiming GM reneged on a promise to compensate for lost cash value and provide an extended warranty. GM spokesmen have denied that cash reimbursement of any lost value or extended warranties were part of their agreement.

The issue of resale value has been the most significant bone of contention between owner groups and the corporation. Finkelberg said a letter being composed by the new group's attorneys seeks to discuss reimbursement for loss of value, extended warranties and reimbursement for repairs.

Finkelberg said the new organization plans "a national promotion" if GM does not proceed with what he termed "fair" negotiations by "late May or early June." He declined to offer details of the promotion.

The FTC last fall approved a nationwide arbitration program to settle owner disputes arising from the V-8 diesel and GM gasoline engine and transmission problems. Rulings by Better Business Bureau arbitrators are binding on the corporation, but not on car owners.

Illinois Sunday close upheld; some dealers continue fight

CHICAGO. — A group of dealers interested in doing business on Sundays is challenging a recent Illinois Supreme Court ruling that upheld a "blue law" prohibiting Sunday auto sales in that state.

The law became effective Jan. 1, 1983, but has not been enforced because the case was on appeal.

Attorney Robert E. Gordon, representing a group of about eight dealers doing business on Sundays, said he will first challenge the law by asking for a rehearing, then will take it to the U. S. Supreme Court.

The dealers earlier challenged the law mandating Sunday dealer closings on grounds it discriminated against a particular type of business. Their challenge, upheld by a Circuit Court ruling was overturned.

The Sunday-closing law in its most recent form was initiated by Illinois auto dealer groups representing some 2,000 members, said Dennis M. O'Keefe, attorney for the Chicago Automobile Trade Assn. and the Illinois New Car and Truck Dealers Assn.

An earlier, 1962 Illinois law prohibiting Sunday car sales was overuled by the state's Supreme Court. O'Keefe said about a dozen such state laws have been ruled constitutional; another half dozen have been overturned at the state level. None has been heard by the U. S. Supreme Court, he said.

Company plans better communication with dealers

Rolls-Royce sees 15 pct. sales gain

By John A. Russell
New York Staff Writer

LYNDHURST, N.J. — Anticipating a 15-percent sales increase in 1984, Rolls-Royce Motors, Inc., is taking steps to ensure continued growth by increasing the sales of communication with its dealer body.

Robert Schwartz, recently appointed executive vice president of the company, said that this communication would be a key to Rolls-Royce's planning for the U.S. market.

Schwartz, who assumed his post several months ago, was formerly vice president for North American sales at American Motors.

After coming off a relatively poor 1982, the company rebounded in 1983 to a 15-percent sales increase to 1,050 units. Schwartz expects 1984 to show another 15-percent gain.

But this is not the same market as it was five years ago. For Rolls-Royce, two changes have occurred. The model mix now is dominated by the larger, more expensive ($108,000) Silver Spur and the Rolls-Royce buyer is changing.

As for the model mix, Schwartz said this has been gradually shifting over the past several years until it reached 60 percent Spurs to 40 percent Spirits. At $98,000, the Silver Spirit once led sales for Rolls-Royce in the U.S. with percentages exactly the opposite of today.

But, Schwartz said, "Americans are the kind of customers who want the larger cars" and the extra four inches on the Spur plus several more luxury items seems to be the attraction.

Today, the Rolls-Royce customers are younger, still as affluent, but expecting to have their purchases justified in their minds. In addition, 12 percent are women.

The median age of buyers has dropped considerably over the past several years. Once it was in the mid-50s and today it is in the mid-40s, Schwartz said.

Consumer attitudes also have changed in the past five years.

Rolls-Royce over the years has appealed to the status-consciousness of its customers by bluntly stating that Rolls-Royce cars are the best. Now, however, customers want to see reasons to back up those statements, Schwartz said.

Consequently, Rolls-Royce developed more of a technical advertising campaign explaining the craftsmanship involved in building each automobile. Here, individual craftsman are featured in the copy to stress the technical points.

Schwartz is most adamant on one fact: Rolls-Royce is part of the auto business, not apart from it.

The company faces many of the same problems other manufacturers and importers confront, though on a different scale, he said.

Communication with the 70 dealers is high on his list of priorities.

A dealer meeting has been scheduled for the spring to explain the advertising and marketing strategy now under development.

In line with this, Schwartz said the company would be attending the NADA convention next year, as it did this year, and he also is planning a dealer announcement for new models in December.

Rolls-Royce has not been involved with these types of actions on a regular basis in the past. Schwartz said, "we have to be closer to the dealer organization so we can do it together."

Also, he is planning to take dealers to the factory at Crewe, England, so they can see how the cars are built. Once the dealers see "how it (Rolls-Royce) is different" they can "tell people the difference," he said.

The U.S. market is being emphasized by the factory, he said, since it accounts for 50 percent of Rolls-Royce production. The models now offered in the U.S. are better tuned to the desires of the U.S. buyer, he said, and this will continue.

He is also stressing service and parts. Schwartz said today parts can be obtained overnight and service is being emphasized throughout the organization.

Rolls-Royce intends to hold the line on prices for as long as possible, according to Schwartz. There was not a price increase for 1984 and in 1983 the company had a price reduction. The goal in holding the line on pricing is to expand the market, he said.

Longer rebuttal period set on used-car rule

WASHINGTON. — An extra rebuttal period is being offered by the FTC for the public to comment on NADA's cost-benefit study of the still pending used-car rule. Closing date is May 14.

The decision already has been delayed beyond the usual rebuttal period.

Honda to give up production of midget van, truck

TOKYO.—Honda plans to end production of its TN Acty 550-cc van and truck and subcontract the job to one of its suppliers instead.

Yachio Industry has concluded a deal with Honda under which it will build the midgets starting in the summer of 1985, thus freeing up some extra capacity for Honda's other models at the Suzuka factory.

Yachio is now making three-wheeled cycles, fuel tanks, air cleaners and some minor assemblies for Honda motorcycles. It is investing $40 million in its Yokkaichi plant.

To build the vans at a rate of 10,000-12,000 a month, a body welding shop, paint shop and final assembly shop are to be built covering 400,000 square feet. Honda will supply the pressings and the engines and transmissions.

The timing of the move is significant. By the summer of 1985, Honda will want to install tooling for the XX executive car developed jointly by Honda and BL in time for production to start in 1986.

Whether the XX car will be built at Sayama or Suzuka is not yet known, but the move will give Honda sorely needed capacity.

'Hands-free' cellular phone offered on 1984 Mark VII

DETROIT. — Lincoln-Mercury customers now may order factory-installed "hands-free" cellular mobile telephones on the '84 Continental Mark VII.

The option is priced at $3,700.

The phone system permits persons, after dialing, to talk through a microphone concealed in the headlining of the car and to listen through the car's regular sound system speakers. The driver may talk while keeping both hands on the steering wheel.

The "hands-free" feature ensures that all who ride in the car may talk through the omnidirectional speaker and all who ride may listen.

The phone's dialing buttons are integrated into the Mark VII's console between the two front seats. The only indication that there is a mobile phone in the car is the short pigtail antenna on the deck lid.

Drivers who wish traditional telephone calling or who wish privacy in listening may use a handset integrated into the car's console.

Robert L. Rewey, L-M general manager, said, "As the new mobile phone market takes shape, we plan to offer the 'hands-free' phone on other L-M products."

The telephone is designed to work with cities offering the cellular mobile radio system—to date, Chicago, Washington, Baltimore, Indianapolis and Milwaukee.

Scheduled to be in service by the end of 1984 are Atlanta, Boston, Buffalo, Cincinnati, Cleveland, Dallas, Denver, Detroit, Houston, Kansas City, Los Angeles, Miami, New Orleans, New York, Philadelphia, Phoenix, Pittsburgh, St. Louis, San Francisco, Seattle and Tampa.

The mobile telephone hardware is being supplied by Motorola, Inc.

No hands!

The '84 Continental Mark VII cellular mobile telephone concept car features "hands-free" operation. Driver speaks into a hidden microphone in the headlining of the car and listens through the car's regular entertainment system speakers.

Increases sales at McCafferty Ford

Paint/body work is boon for dealer

LANGHORNE, Pa.—About 18 months ago, Fran DiDonato was called in by Gary Buch, the new owner of McCafferty Ford, to launch the dealership in the paint and body business. Up to that time, the 30-year-old dealership only sold cars.

"All it did have in the way of paint and body service was a painter and body man who did a minimal amount of service, such as taking out a small dent or making a touch-up, DiDonato said.

"Where more work was needed, the job was sent out and this dealership never accepted any body or paint work as such," he said.

When Buch took over, he decided that this had to be changed.

It was quite obvious to the owner that a paint and body shop influenced customers' buying decisions. That for the most part, car buyers wanted to do business with a dealership that also did its own servicing. And since his dealership intended to do this, it might just do other work as well.

At the time, DiDonato was the body shop foreman in another deal. He implored the management to place greater emphasis on its body shop, but there was great reluctance.

"Competition is going to get more intense between new-car dealers and the cost of body repairs is going to increase," DiDonato said.

"In order to sell more cars and to hold down the cost of repairs, it is going to become increasingly more important that a body shop update its equipment. And if it is already doing this, it might just as well take in other work because of its profit-making opportunity.

"The shop that doesn't update itself is going to be out of business. And if it's a body shop in a dealership, it is going to create a hardship on the sale of new cars. And since I was working for a dealership that didn't want to face these facts, it meant that it had nowhere to go."

When Buch told DiDonato to set up a shop the way he thought it should be, he seized the opportunity to develop a growth situation.

"We now have 11 men in our shop, and I am getting ready to put on a couple more," DiDonato said.

"And in the past 18 months, this dealership has been selling more cars than in any other 18-month period. And also doing its paint and body work at a lesser cost.

"Moreover, we are continually attracting more outside work without doing any advertising. We will begin to advertise as soon as we feel that we will be able to handle all the extra work that this will attract to our body shop.

"Right now, word of mouth and satisfied customers are all we need to keep us busy. And body work can be profitable when you have the right equipment and men to do the job."

To place greater emphasis on its new paint and body-work department, McCafferty Ford put up a separate 9,000-square-foot shop. At the suggestion of DiDonato, it was divided into a separate frame and paint area to ensure safer and cleaner working conditions.

"Without question, our equipment and workmanship is responsible for the growing number of estimates that we are now making weekly," DiDonato said.

"We now do better than 100 a week. And we credit the high percentage of work orders that they produce to the appeal that our shop has to the motorist who comes here."

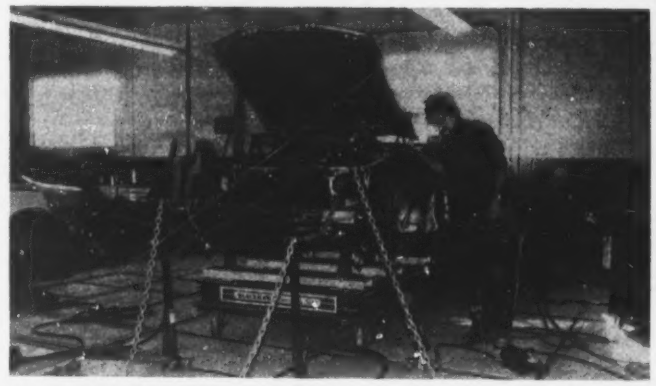
Currently, DiDonato is thinking of adding another bench and paint booth.

"Our body shop has had a tremendous effect on this dealership's direction," said DiDonato.

Office in Washington opened by Subaru

WASHINGTON. — Subaru of America, Inc., is opening a Washington office at 1700 K Street, N.W., Suite 901, Washington, D.C. 20006.

Responsibilities at the new location will be handled by Carina Kjellstrom, Governmental Affairs Washington representative for Subaru.



A good influence

McCafferty Ford, Langhorne, Pa., found that adding a paint and body shop to its new-car sales operations has positively influenced customers' buying decisions.

Japan's first-quarter sales up 5 pct. with record March

TOKYO.—Passenger-car sales set an alltime record in Japan in March at 452,216 units against 413,083 in March, 1983. That increase of 9.47 percent bodes well for the industry for the rest of the year, especially as the year started badly.

January is always a bad month for auto sales and only Toyota and Daihatsu increased sales in January over 1983.

Despite the bad start, overall sales of passenger cars increased by 5.84 percent for the first quarter — up from 803,123 to 849,985 units.

The 550-cc midgets, which have been gaining more ground than the larger autos for some time, are now losing out, increasing sales by about 4 percent against 6 percent for larger cars.

Overall, the biggest surprises were in the top-sellers' list, with the Nissan Sunny (Sentra) coming out as biggest seller not just for March but for the quarter as a whole, when its sales totaled 54,727, against 51,763 Corollas.

This is really bad news for Toyota, since it usually does well in March, the biggest sales month of the year.

Overall, Toyota did sell a lot of cars in March — 182,598 against 162,911 a year ago—but the front-drive Corolla slipped back a little compared with the previous model.

Thanks to the popularity of the Sunny, Nissan was able to increase sales over the period compared with last year, but failed to increase market share. In fact, its share dropped marginally from 30.7 to 30.6 percent, whereas Toyota pushed upwards from 41.6 to a dominant 43 percent.

Honda (7.6 percent), Mazda (7.0 percent) and Mitsubishi (5.4 percent) all lost market share slightly, the difference being that whereas Mitsubishi increased sales, and Honda remained steady, Mazda sales fell back.

The result is that whereas Mazda outsold Honda in the first quarter of 1983, this year the tables were turned—60,800 Hondas were sold against 56,195 Mazdas.

Mitsubishi trailed at 43,000 units, and the new Colt models, despite being introduced last fall, failed to equal sales of the previous model in the same period. The Sigma, introduced at about the same time, however, is about 30 percent ahead of its predecessor.

Whereas diesel auto sales have been increasing rapidly over the past two years, as a number of new models have been introduced, there has now been a mild setback, with sales down from 50,600 to 47,800 for the quarter.

The reduction is fairly widespread across the board, owing to the receding fear of a fuel shortage. If it continues, Isuzu seems certain to suffer most, especially since the R-car replacement for the aging Chevrolet Gemini is not due until late fall at the earliest.

UAW's Ephlin cites job security as top goal

'No single issue' can cause strike

By Marjorie Sorge
Labor Editor

DETROIT. — There is no single issue that could cause a strike during this year's bargaining between the UAW and Ford Motor Co. and the UAW and General Motors, according to union Vice President Donald F. Ephlin.

The union's chief issue in this year's bargaining is job security, and the UAW plans to build on certain issues negotiated in the 1982 agreement. That includes more lucrative profit-sharing formulas at both companies.

Contracts between the UAW, Ford and GM expire at midnight Sept. 14.

But, Ephlin said, given the high profits of the Big Two in 1983 and during the first quarter of this year, the workers "have the right to expect economic increases." He said the workers have not had a real wage increase in three years.

Ephlin also warned that high executive bonuses were sending the wrong message to the workers and government, leading many to believe the industry is no longer in trouble.

"The industry is not back; there are still serious corporate problems," he said.

While Ephlin said he hopes the union chooses to bargain at GM first to set the pattern for the contract, he emphasized that whichever company is chosen as the "strike target," the contract negotiated there will be expected to be accepted by the other company.

The UAW is not looking for a strike in this year's negotiations, Ephlin said, emphasizing that there is no single issue which could back the union into a strike. That happened in 1970, when the major demand was lifting the cap on the cost-of-living-adjustments (COLA) which made a strike "almost inevitable," he said.

• Some analysts have predicted that the UAW has to strike this year because of the high profits, executive bonuses and the need for Owen Bieber, new UAW president, to prove himself as the union leader.

Ephlin said such predictions were "nonsense."

Other analysts have predicted that the union will not strike because it is an election year and it could damage the chances of the Democratic candidate. But Ephlin said a strike is not a political issue and reminded reporters that 1976 was also an election year and there was a strike at Ford.

Ephlin was speaking to reporters following a meeting of the President's Commission on Industrial Competitiveness, of which he is a member.

During last week's meeting, the commission called for greater labor-management cooperation to improve the U.S. competitive position in world markets, but it offered few specifics on how to accomplish that.

The commission did make six recommendations:

1. Endorsed the principle of labor-management cooperation, open communications and worker participation in company decisions.

2. More effective use of computers in elementary and secondary education through software research and teacher training.

3. A public-private sector partnership offering technical assistance to schools, providing coordinated services to assist potential dropouts and other troubled students.

4. Improved trade law practices, including streamlining and clarifying anti-dumping and counter-ailing-duty measures.

5. Congressional enactment of the Foreign Sales Corporation Act (FSC), the Administration's alternative to the Domestic International Sales Corp. (DISC). FSC would allow U. S. firms to establish subsidiaries managed outside the U. S. which would engage in exporting and would become eligible for certain tax exemptions on export income.

6. Incentives to increase the number and quality of engineering graduate students and faculty members and increased funding support for engineering equipment and research.

April sales swell despite setback for import cars

Continued from Page 3

import restrictions, were down for the most part.

Porsche-Audi reported its second monthly record in as many months, BMW had a record April, Jaguar set another record, as did Mercedes-Benz and Saab. Volvo broke into the five-digits arena with whiz-bang sales of 10,360 new passenger cars in April.

Toyota was down 19.12 percent, Nissan was down 26.16 percent, Honda was up a few hundred units, Mazda was down 18.73 percent and Subaru was down 15.05 percent.

With imports slipping to 19.47 percent of the month's market, the remaining pie was sliced as follows: Intermediates with 28.54 percent, compacts with 18.09 percent, subcompacts with 14.32 percent, standards with 11.28 percent and luxury models with 8.30 percent.

Excluding imports, intermediates had 35.45 percent, compacts had 22.46 percent, subcompacts had 17.78 percent, standards had 14.01 percent and luxury cars had 10.30 percent.

Third-period domestic sales were up 20.66 percent, to 278,540 from 230,846. The daily selling rate was up 35.74 percent, to 34,818 from 25,650, with eight days this year compared with nine in 1983.

GM was up 20.56 percent, Ford was up 36.07 percent, Chrysler was up 1.38 percent, AMC was off 26.79 percent, VW was down 12.76 percent and Honda was up 310.50 percent.

The market-class breakdown was 58.94 percent for GM, 23.59 percent for Ford, 12.23 percent for Chrysler, 2.02 percent for AMC, 1.16 percent for VW and 2.06 percent for Honda.

Criss Cadillac opens

PROVIDENCE. — Criss Cadillac Corp., headed by Richard Douglas, has opened here.

Month's total is 730,358 cars

April auto output best since 1978

By Joe Wilssens
Staff Writer

U. S. auto manufacturers wrapped up production in April with their best output for that month in six years.

The makers completed an estimated 730,358 cars last month, up a substantial 36.82 percent over 533,972 assembled in the year-ago month. It was the best April build since 875,652 cars were finished in 1978.

Domestic auto manufacturers slated production of 169,055 units last week, 1.90 percent behind than the prior week's 172,329 and 31.68 percent better than 128,386 finished in the year-ago week.

Year-to-date, 2,992,790 cars have been completed, 37.93 percent above the year-ago total of 2,169,787 at this point. The year's 3-millionth auto is due to be built today (May 7).

Breakdown for last week was: General Motors, 56.44 percent; Ford Motor Co., 22.90 percent; Chrysler Corp., 14.73 percent; American Motors, 2.84 percent; Honda, 1.70 percent, and Volkswagen of America, 1.39 percent.

GM announced temporary layoffs of 2,300 workers on its Lansing B-line and 2,500 on its Lansing G-line. The B-line layoffs have been in effect since March 16, with the workers expected to return June 18. The G-line layoffs are expected to extend from May 6-Aug. 6. GM gave conversion to N-car production as the reason for the layoffs.

Eighteen auto assembly facilities operated extra hours last week.

At GM, Detroit, Flint (B and G lines), Framingham (Mass.), Lordstown (O.) and Oklahoma City worked two shifts Saturday (May 5).

Ford's Atlanta, Chicago, Dearborn, Edison (N. J.), Kansas City, St. Louis, Wayne (Mich.) and Wixom (Mich.) put in extra daily hours. The Wayne facility also operated Saturday.

This week, Ford plans the same daily overtime, with Atlanta, Kansas City and Wixom working Saturday (May 12).

Chrysler slated extra daily hours at Belvidere (Ill.), Jefferson (Detrot), St. Louis No. 1 and No. 2 and Newark (Del.). Jefferson worked two 8½-hour daily shifts while the four other assembly plants operated two 9-hour shifts. Belvidere operated two 8-hour shifts Saturday.

Wirth urges Dole to act on passive-restraint rule

WASHINGTON. — Rep. Timothy E. Wirth, Colorado Democrat and chairman of the House Telecommunications, Consumer Protection and Finance Subcommittee, is urging Transportation Secretary Elizabeth Dole to put a passive-restraint standard into effect "as soon as possible."

A hearing last March before the subcommittee, in which such companies as General Motors, Ford Motor Co. and Mercedes-Benz testified on air bags and automatic seat belts, reinforced Wirth's belief "that strong federal leadership is necessary if we are to begin to move forward and reduce the terrible carnage that occurs daily on our highways," he said in a letter to Dole.

The emotional and political overtones of the automatic crash protection debate have blurred reasonable thinking on the subject, Wirth insisted, and all attempts to introduce air bags voluntarily have failed.

"You now have a rare opportunity to set aside the past and respond to the facts on record," he said. "You have the opportunity, indeed the mandate as supported by the Supreme Court, to deploy a technological vaccine of enormous proportions."

Truck production reaches 6-year high for April

U. S. truck production in April was the highest for that month in six years.

Domestic truck production reached an estimated 256,669 units last month, 35.74 percent above 189,085 built during the year-ago month. It was also the best estimated total for April since 315,994 were finished in 1978.

Truck manufacturers slated completion of 62,556 units last week, down 4.37 percent from the prior week's 65,416, but 26.13 percent higher than the year-ago week's 49,598.

So far this year, the industry has finished 1,109,361 trucks, an impressive 47.86 percent gain over 750,294 finished at this time in 1983.

General Motors Truck & Bus announced the temporary layoff of 2,000 at GM's Baltimore assembly facility. The layoff, which went into effect March 30, is expected to end Aug. 20, and was attributed to conversion to M-van production.

GM had three plants on Saturday (May 5) overtime last week. Detroit worked one shift, while Lordstown (O.) and Pontiac No. 5 operated two shifts.

All six Ford Motor Co. assembly facilities worked daily overtime last week. This week, Ford again plans extra daily hours at all plants and Saturday (May 12) hours at Kansas City.

Canadian makers set April record for truck output

Canadian truck manufacturers posted their best April production total ever, while Canadian auto makers wrapped up their best April in six years.

Auto producers slated production of 97,020 cars during the month, the best output for April since 106,210 units were finished in 1978, and the best any-month build since 105,854 were assembled in May, 1983.

The makers targeted completion of 23,936 cars last week, 1.98 percent greater than the prior week's 23,471 and 9.95 percent above 21,770 assembled in the year-ago week.

To-date this year, the manufacturers have produced 400,071 cars, 14.77 percent ahead of 348,573 completed during the same period in 1983.

April truck production was estimated at 70,573 units. It was the best-ever April build, due to the current truck classification placed on T-115 vans built at Chrysler Corp.'s Windsor (Ont.) facility.

Truck makers slated completion of 17,934 units last week, six more than the prior week's 17,928 and 41.17 percent greater than the year-ago week's 12,704.

So far this year, the Canadian industry has completed 299,227 trucks, a 64.92-percent increase over 181,435 built at this time in 1983.

Chrysler estimated assembly of 2,370 Dodge Caravans, 2,190 Plymouth Voyagers and 912 Mini-Ram Vans at its Windsor plant last week, bringing the year-to-date T-115 total to 80,-296.

Sprint by Suzuki

For Western Chevy dealers May 31

Chevrolet dealers in nine Western states will sell the Sprint, a one-liter minicar manufactured by Suzuki, starting May 31. Base price has been tentatively set at $4,949. Riding on an 88.4-inch wheelbase, the new car is 141.2 inches long, 60.3 inches wide and 53.2 inches high.

Chevy's Suzuki Sprint carries $4,949 sticker

By Matt De Lorenzo
Los Angeles Reporter

SEDONA, Ariz. — Sprint, a one-liter minicar manufactured by Suzuki, goes on sale May 31 at Chevrolet dealers in nine Western states, including Alaska and Hawaii.

Base price has been tentatively set at $4,949, meeting a divisional objective of having an entry-level car at under $5,000. However, the base price for the three-cylinder Sprint is only $41 less than that of the Chevette Scooter, which carries a sticker price of $4,990.

"Pricing is as critical to this product as any we've had," said Robert Burger, Chevrolet general manager. "Everything we've done has been done with an eye to the final price."

In some quarters, the sub-$5,000 price tag tentatively set by Chevrolet may not be considered low enough to prevent a price war among Japanese competitors for the title of lowest-priced car in the U.S.

Aside from the Chevette Scooter, the only other car currently under $5,000 is the Dodge/Plymouth Colt at $4,995. Chevette and Colt are somewhat larger than the Sprint.

Riding on an 88.4-inch wheelbase, the new car has the shortest overall length of any sold in the U.S. at 141.2 inches. Overall width is 60.3 inches and height is 53.2 inches. Curb weight is 1,500 pounds and the three-cylinder aluminum block engine with cast iron sleeves weighs just under 150 pounds.

• While it is left to be seen if the car will retain the lowest-priced status, Sprint wins the fuel economy derby with an EPA rating of 53 MPG city and 68 highway.

The overhead-cam engine produces 48 HP at 5,100 RPM and 57 pounds-feet of torque at 3,200 RPM. The powerplant is mated to a five-speed manual transaxle driving the front wheels. Fourth and fifth gears are overdrive.

The front suspension features MacPherson struts while the

Nissan to assemble Sentra in Tennessee next April

By Marjorie Sorge
Labor Editor

Nissan Motor Mfg. Corp., U.S.A. will begin building the Nissan Sentra two-door notchback at its plant in Smyrna, Tenn., next April, company officials said last week.

The Sentra will be a 1985 model and will be built on the same line as the trucks currently being produced at the facility, according to Jerry Benefield, manufacturing vice president.

Earlier this year, NMMC President Marvin T. Runyon told Automotive News the company would begin to see a profit by 1985. According to Benefield, the addition of the Sentra will increase that profit substantially.

NMMC currently builds trucks at a rate of 10,000 a month (120,000 a year) on one shift. Next April, the number of trucks will be cut to accommodate the car production and there will still be only one shift.

A second shift will be added in September, 1985, Benefield said. Production will increase gradually and plans call for annual output of 100,000 cars and 140,000 trucks within three years plus an increase of 1,100 workers. There are currently 1,900 employes at the plant.

Capacity at the NMMC Smyrna plant is 240,000 units annually. According to Benefield, there are currently no plans to increase that capacity although there is plenty of room on the plant site.

"The Nissan philosophy is to go international and build products in the marketplace where they are selling," Benefield said.

• Nissan sold 214,337 Sentras in the U.S. last year. It produced a total of 556,340 for worldwide distribution. Sentra is the company's top-selling line in this country.

But, like the Nissan philosophy for truck production, the company will never build the total U.S. volume for Sentra regardless of how high the market rises.

"Our plan is always to build the lowest number that can be sold in the U.S., and everything over that will come from Japan," Runyon told Automotive News in an interview earlier this year.

"So if there is a drop in sales of our vehicles, we won't have

breaking news

Second shift due July 9 at GM Orion plant

ORION TOWNSHIP, Mich. — General Motors plans to start a second shift July 9 at its assembly plant here. The plant produces the new front-wheel-drive Cadillac DeVille and Oldsmobile Ninety-Eight. Some 2,300 employes will be added. Priority will be given to Pontiac and Fisher Body employes who lost their jobs when those plants in Pontiac were phased out when the Orion Township plant was built.

Toyota SV-3 due in June

TOKYO.—Due to debut in June is the Toyota SV-3, the mid-engined coupe modeled on the Fiat X 1/9. To be powered by a transversely mounted 1.6-liter 16-valve engine and transaxle, the new car is based on standard strut suspension from the front-wheel-drive Corolla. A prototype was shown at the Tokyo Motor Show last year. Toyota plans to build 4,500 monthly, evidence that, as ever, it intends to tackle the mass market, leaving the specialist market to Lotus, which is due to unveil its new car based on Toyota mechanical components in the fall.

Luxury, standard models are scarce

New-car stocks drop to 53 days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory continued to decline during April and the industry opened May with a 53-day supply, down from a 56-day stock a month earlier and a 59-day supply the month before that.

The May 1 inventory totaled 1,541,985, down a bit from 1,579,155 a month earlier. A year ago, the domestic new-car inventory totaled only 1,193,296 units, which was also a 53-day supply, a reflection of the much higher sales pace this year.

Table on Page 61.

Shortages spread through the industry's lineup, with luxury and standard models in particularly meager supply—although the shortest of all were two subcompacts, the Pontiac Fiero at 12 days and the Honda Accord at 13.

All corporate makers except Ford Motor Co. trimmed their days-supply tallies during April. General Motors accounted for more than the decline in the total unit count, as Chrysler Corp., Ford Motor Co. and Volkswagen all added to their stockpiles during the month.

• GM opened May with a 47-day supply, down from 53 days a month earlier. GM chopped almost 60,000 units from its unit count during April. Fiero was lowest in the industry at 12 days, but a number of GM big-car lines were also short, including Buick Century, LeSabre and Electra, Cadillac DeVille and Olds Cutlass Ciera, 88 and 98.

Ford Motor Co. was the only corporate maker to increase its days-supply figure, opening May

March business 15 pct. ahead of last year

Service volume posts another gain

By Francis J. Gawronski
Service Editor

Although the rate of growth of service and parts business in new-car dealerships in March dipped 10.9 percent below the record-setting pace achieved in February, shop business still registered a healthy increase over the volume recorded in the same month a year ago.

According to the Automotive News Service Index, service and parts business in dealerships in March amounted to 115.3 percent of the volume recorded in March, 1983.

In February, the increase in shop volume was 26.2 percent, the biggest gain in the 23-year history of the Service Index.

March also marked the 11th consecutive month in which shop volume registered an increase over the year-earlier month.

In March, all five indicators used in compiling the Service Index scored impressive gains.

The biggest gainer was shop parts sales, those used on both customer-paid and warranty repairs, which climbed 22.0 percent, while sales of all parts

Preceded deposition in X-car brake case

Peck meeting with GM disclosed

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Former NHTSA head Raymond A. Peck failed to mention a meeting with GM lawyers just five days before those same lawyers took his testimony under oath for possible use in the ongoing GM X-car brake litigation.

In reconvening the deposition and under cross examination by government lawyers, Peck admitted the meeting had occurred, contrary to the impression created in his sworn testimony.

Peck considered the meeting a "casual" one to clarify Congressional testimony he had given a year earlier and not as preparation for a trial which he says he did not even know was imminent.

Both the private meeting with GM lawyers and their later deposition involve issues about the allegedly defective brakes in some 1.1 million 1980 GM X-cars common to both Congressional testimony and the current trial.

Here are some facts:

Peck, now employed by a local law firm, is being represented by NHTSA lawyers because he is a former NHTSA head, but they do not represent him as a person.

Although NHTSA lawyers asked for a protetction order to prevent his being deposed, this was denied.

Peck is himself a lawyer but is not licensed to practice in the District of Columbia. Peck had requested a subpena to testify in this deposition. The law firm with which Peck is associated will bill GM for Peck's services, according to Peck.

• Statements which Peck made while NHTSA administrator to a House Oversight Subcommittee headed by Rep. Tim Wirth, Colorado Democrat, tend to support aspects of GM's defense against the government's suit, but Peck disavows all knowledge of events leading to the filing of the suit as well as even such public knowledge as the date on which the trial was set to start. (Incidentally, the trial, which has been in recess, is scheduled to resume today May 14.)

At immediate issue is Peck's failure to mention a meeting several hours long with GM's assistant general counsel William L. Weber Jr., and with Michael B. Lewiston, of Bodman, Langley & Dahling, of Detroit, at the request of GM Washington Vice President James D. Johnston although Peck was asked directly to list all contacts with GM after he left NHTSA on May 21, 1983.

The suit was not filed until Aug. 3, 1983, and Peck was not involved with the alleged de-

Rapping the gavel

Ford Chairman Philip Caldwell raps the gavel to signal the beginning of the company's annual shareholder's meeting in Detroit last week. Caldwell defended Ford's bonus system.

Bonuses spotlighted at Ford annual meeting

By Michelle Krebs
Financial Editor

Ford Motor Co. Chairman Philip Caldwell had plenty to say about executive bonuses at the auto maker's 29th annual meeting in Detroit last week, but little to say about when he will retire.

Caldwell defended to the nearly 900 shareholders his own $7 million in compensation, which included his bonus and stock options he exercised.

"I did not get cash. I did not invest it in yachts and condominiums, and I didn't run away from the company," he said. "Instead, I invested in the company because I believe in it."

Caldwell said he now owns 113,000 shares of Ford stock compared with the 20,000 he owned last year.

The bonus system, he noted, has been in place for 29 years, approved by the stockholders and administered by outside directors.

The executives who stayed with Ford during the tough times deserved to be rewarded, he said.

"If the management of this company had been inclined to play games, it could have pursued a course of action of short-term decisions and short-term profits," Caldwell said.

"This management did not do that. Instead, it made decisions to ensure the company will be around in the next 80 years."

A shareholder and Ford Motor employe claimed the bonuses indicated an "inequality of sacrifice."

However, Caldwell responded that while executives took major salary cuts, others did not; rather their vacations and fringes were reduced and pay increases were slowed.

• Caldwell sidestepped shareholder questions on when he will retire and who will succeed him. Caldwell will be 65 next Jan. 27.

"I don't have a thing to offer on that," he said, adding that there is no pattern as to how such matters are handled at Ford.

He said he hadn't given any thought to staying on if requested to do so by the board if directors.

Caldwell said Mazda Motor Corp., in which Ford has a 25-percent interest, has not decided if it will use Ford's Flat Rock (Mich.) plant for its vehicle production. The Flat Rock plant is one of three U. S. sites being considered by Mazda.

Ford Motor Co. likes the idea

Keller, Dingell, Williams to address World Congress

The international vehicle industry is gearing up for Automotive News Week, Aug. 26-30, which features the ninth annual Automotive News World Congress and the third annual Automotive News World Expo.

World Congress is a four-day automotive seminar to be held at the Westin Hotel in downtown Detroit.

Thirty-four top-level decision makers from inside and outside the industry will address World Congress attendees.

Among those 34 are: Maryann Keller, money manager with Vilas-Fischer Associates; Rep. John D. Dingell, Michigan Democrat, and Edson Williams, general manager of Ford Truck Operations.

John D. Dingell

Keller will discuss the industry's financial outlook. Dingell's presentation will focus on the current situation of industry-government relations. Williams' topic is the new foreign truck competition.

World Expo, a three-day buy/sell trade fair, will bring leading car and truck manufacturers and hundreds of suppliers and distributors to Detroit's Cobo Hall, which is near the Westin Hotel.

With the show 3½ months in the future, 120 companies have signed up to exhibit automotive materials, machinery, design concepts and service.

Some 28,400 square feet of exhibition space have been spoken for. Last year, 182 exhibitors occupied 37,700 square feet of space.

Once again, more than 50 of the world's major car and truck makers have been invited to staff complimentary buying offices on the show floor.

For further information on both events, advance registration and hotel accommodations, contact: Automotive News Week, 965 E. Jefferson, Detroit, MI 48207. Telephone: (313) 567-9520. Cable address: TWX 810-221-5122 AUTNEW.

Compucheck called industry's most comprehensive diesel-coverage program

Cummins unveils protection plan

By Jack Walsh
Truck Editor

ANAHEIM, Calif.—Cummins Engine Co. has introduced what it calls the trucking industry's most comprehensive engine-coverage program — the Compucheck Protection Plan.

Dave Lynch, general manager, automotive dealer marketing, said Compucheck, the firm's new computerized engine-diagnostic system, and the protection plan will help reduce engine-operating costs, minimize repair time and provide higher resale value.

"Currently, there are nearly 35 Compucheck units in operation in Cummins distributorships in North America, and we expect to have more than 75 installed by the end of September," he said at a press conference here.

Cummins' strategy, he noted, is "to cover all the main trucking arteries by pushing the technology into the industry through our distributor network this year. Next year Compucheck will be available to the rest of the Cummins service network."

The result of a 10-year design and development program, Lynch said, the microprocessor-based Compucheck system measures engine pressures, temperatures and speeds without removing the engine from the truck.

• "We are convinced that truckers who follow a regular preventive maintenance schedule including Compucheck inspections can expect reduced engine-operating costs," Lynch said.

The plan was developed principally for independent truckers and small fleets, he added.

The Compucheck Protection Plan is available to buyers of Cummins NTC-400, NTCC-400 or Formula 400 engines in new trucks. The plan will be expanded in 1985 to other Cummins diesels, Lynch said.

He explained that for $550, selected engine components will be covered for four years or 400,000 miles, provided the owner has the engine Compucheck-inspected every 80,000 miles, follows the maintenance schedule in the Cummins operation and maintenance manual, and has all covered repairs made at Cummins distributors or dealers.

Lynch said field testing conducted at four Cummins distributors has shown that the

Registrations move up in all market segments

Two-month and February registrations of new trucks of all types in the U.S. were up dramatically from a year ago, with increases in all three market segments and all eight weight classifications.

Through February, registrations totaled 584,758 units, according to R.L. Polk & Co. statistics, a gain of 60 percent over the year-earlier 365,407. February tallies were up 71.2 percent, from 176,611 a year ago to 302,360.

GVW Table on Page 44.

New York and Oklahoma figures for 1984 were compiled from manufacturers' sales records. No registrations were available for Oklahoma in 1983.

Light-truck tallies in the first two months totaled 553,512 units and accounted for 94.7 percent of the industry total. They were 61.4 percent higher than last year's 342,867.

The medium-truck count through February was 6,855, a gain of 12.4 percent over the year-ago 6,100. Heavy trucks were up 48.4 percent to 12,246 units, compared with 7,624 in the first two months of 1983.

• There were 312,380 Group 1 tallies through February, an increase of 62 percent over the year-earlier 192,833. The Group 2 count was up 57.5 percent to 235,805 units, compared with 149,741 last year. There were 5,327 Group 3 units, versus only 293 a year ago.

Groups 4 and 5 also recorded impressive gains. The Group 4 total was 101 in the first two months of 1984, compared with 53 a year earlier. Group 5 had 345 tallies, as against 114 last year.

Group 6, the only class to

One of two new Mercedes models

Powered by a 168 horsepower turbocharged diesel engine, the Mercedes-Benz L1317 is one of two new models that feature more power than the trucks they replace.

New Mercedes models feature greater power

PORTLAND, Ore.—Mercedes-Benz Truck Co. is introducing two truck models that feature higher power and other improvements over the models they replace, according to Peter E. Rupp, president.

The new 25,000-pound GVW L1117 and 30,000-pound GVW L1317 replace the L1116 and L1316 models, and are being phased in at the company's Hamtpon (Va.) assembly plant.

The new trucks will cost the same as the older models, Rupp said.

The L1117 and L1317 are powered by a new 168-HP version of Mercedes' 0M352A turbocharged diesel. Torque has been increased by 19 percent to 369-foot pounds, and a peak torque achieved at 1,700 RPM allows the engine to maintain its excellent fuel economy, Rupp noted.

In addition to more power, the engine also features an "aneroid compensator" to adjust fuel mixture when altitude changes, "moly"-coated top compression rings plus reshaped combustion recesses in the piston heads for improved performance, a larger-capacity water pump and increased cylinder-head thickness to handle the higher 17.4:1 compression ratio.

Styleside 4 x 2 added to '84 Ranger lineup

DEARBORN.—The Ranger "S," a 4x2 styleside model with a 108-inch wheelbase, has been added to the Ford compact-pickup line for 1984. It has a suggested retail price of $5,993.

Standard equipment includes a 2-liter, four-cylinder engine, four-speed manual transmission, 1,235-pound payload, vinyl bench seat, argent-painted grille and black windshield molding. A 2.3-liter four is standard in California and high-altitude areas.

25 firms start 2-year test of modified Ranger engine

Natural gas powers Ford pickups

By Arthur M. Flax
Assistant Truck Editor

Ford Motor Co. has delivered a test fleet of 27 natural-gas-powered Ranger pickup trucks to 25 utility and natural-gas-related companies.

Ford initiated the natural-gas vehicle (NGV Ranger) program through the American Gas Assn. and its member companies. The utilities, located in the U.S. and Canada, paid $20,000 to lease each vehicle for the two-year test, according to W. Dale Compton, Ford research vice president.

"While many vehicle operators, especially companies in the natural-gas industry, have modified their cars and trucks to operate on natural gas," Compton said, "this is the first time a domestic auto manufacturer has set out to design and build a fleet of such vehicles for a major test."

He said the test would provide Ford with information on economy, range and performance under actual operating conditions.

The Rangers are equipped with 2.3-liter engines modified to take advantage of the high-octane (130) rating and other characteristics of natural gas.

Compression ratio has been boosted from 9.1 to 12.5:1 and hardened valve-seat inserts compensate for the lack of lubrication with the "dry" fuel.

In addition, a specially designed gaseous fuel mixer replaces the carburetor and the distributor and spark plugs have been specially calibrated.

Compton said a Ranger with

Continued on Page 38, Col. 3

Ford puts on the pressure

These 3,000-pound-per-square-inch pressure, fiberglass-wrapped, aluminum natural-gas tanks were constructed with "space age" processes for Ford Motor Co.'s natural-gas-powered Ranger pickup trucks, set for testing by 25 utility fleets.

Dear DYATRON:

Outstanding Chevrolet HONDA

Dear DYATRON:

We have a 120-unit Chevrolet-Honda dealership here in Andover, Massachusetts and have been using a remote batch parts inventory system for the past 15 years. It's been fine until now, but lately customer demand is making us work overtime just to keep up. Can you help us convert to a cost-efficient in-house system so that we can get home at night?

No Weekends in Bay State

DYATRON CORPORATION

Dear No Weekends:

Conversion from a remote batch system to an in-house/micro system can be accomplished in several ways, but we have the feeling that the ECLIPSE S-20 from Data General with DYATRON parts control software is what you're looking for. We call this package CARSway II and it's perfect for a dealership of your size.

CARSway II includes not only parts in stock, but also invoicing, universal parts system, locations, manufacturer data, stock ordering, price updating, inventory analysis, and more.

CARSway II can be used as either a stand-alone parts control station or for other management functions, such as accounting, showroom profit, F&I, DCS, payroll, and leasing. Of course, we could explain these services in greater detail and give you an idea of costs if you would call us toll-free at 1-800-633-3625.

Have a good week ... since you have no weekends.

DYATRON

Outstanding Chevrolet HONDA

Dear DYATRON:

Just back from a long weekend on Cape Cod. What a time! Thanks for the quick installation of CARSway II and the terrific service people you sent in the flesh and on the phone. The conversion was smoother than we'd ever dreamed possible. Thanks especially for the national parts locator. Now that I have the parts locator plus weekends, I'm thinking about building my own car from scratch. I think I may love the car business. My kid called me Mario Andretti when I passed a carload of old ladies on the way back from the Cape. Cars are wonderful machines I told him. Then I told him all about the time I ...

Total 584,758 through February

Registrations move up in all market segments

Continued from Page 16

show a drop in January, with a 10.5 percent loss, scored an 8 percent increase on 6,409 units for the 1984 two-month period, compared with 5,933 in 1983.

Group 7 registrations climbed 17.8 percent, from 7,121 during the first two months of 1983 to 8,389 this year. The Group 8 count jumped 71.7 percent, from 9,319 last year to 16,002.

• The success of the Dodge and Plymouth minivans and downsized Jeep Cherokee and Wagoneer led to increases in market share for these nameplates.

Dodge had 57,499 registrations through February and accounted for 9.83 percent of the industry total. Its share was up 1.59 percentage points from a year ago, when it had 8.24 percent on 30,108 tallies.

Plymouth's penetration was 1.28 points higher than a year ago, rising from 0.35 percent on 1,285 tallies in 1983 to 1.63 percent this year on 9,514 units.

Jeep's 21,056 registrations through February accounted for 3.60 percent of the total, an increase of one point over last year, when its 9,517 units took 2.60 percent of the market.

No. 1 Ford's 170,816 registrations in the first two months accounted for 29.21 percent of the industry total, a decrease of 2.85 points from the year earlier 32.06 percent on 117,139 tallies.

Second-place Chevrolet took 28.13 percent with 164,476 tallies. Its share was down 1.94 points from the 30.07 percent on 109,883 units last year.

HD registrations continue climb through February

Heavy-duty truck registrations continued their sharp rise in February, with 12,546 tallies, up 64.6 percent over last year's.

The two-month total was 24,391, an increase of 48.4 percent over the year-ago.

According to R. L. Polk & Co. statistics, Group 8 registrations for the first two months were up 71.7 percent to 16,002 units, compared with the previous year's 9,319.

Group 7 registrations increased to 8,389, a gain of 17.8 percent over the year-earlier 7,121.

International continued to lead Ford with 5,464 units through February, compared with Ford's 4,600 units.

Ford and International also were the biggest market-share losers. Ford's 4,600 tallies represented an 18.86 percent share of the market, down 5.31 percentage points from its year-earlier share of 24.17 percent on 3,973 units.

International's 5,464 tallies, representing 22.40 percent of the market, was off 1.90 points from last year's 24.30 percent on 3,995 units.

Kenworth's 9.33 percent share on 2,276 units represented the biggest boost in penetration, a gain of 4.42 points over the 4.91 percent share on 808 units during the same period last year.

White, Peterbilt, Freightliner, GMC, Autocar and Western Star also increased their market share for the first two months of 1984. Chevrolet, Mack, Volvo Mercedes-Benz and the miscellaneous group suffered losses.

Honda owners in N.Y. area get BBB mediation

NEW YORK. — Honda owners in the New York area may now settle their unresolved complaints through the Better Business Bureau as the result of an agreement between the Better Business Bureau of Metropolitan New York and American Honda.

The service will be available at all 140 BBBs throughout the U. S. and supplements the existing NADA - sponsored AUTOCAP program used by Honda since 1981.

The program allows access to BBB mediation and arbitration for owners of all Honda models beginning with the 1978 model year.

Owners of new and used Hondas are eligible for the program, as well as Honda lessees for all matters except those involving title to their cars.

The BBB will work with the customer and Honda to mediate the complaint, the bureau said. If mediation fails, a BBB volunteer arbitrator will hear the case and issue a decision within 10 days of the hearing.

Honda joins General Motors, Volkswagen, Audi, Porsche and Nissan in the BBB's Autoline program for mediation and arbitration of consumer complaints. Last year, the Autoline program in metropolitan New York handled more than 4,300 complaints, of which more than 90 percent were resolved by mediation.

Priced between $14,000 and $25,000

Alfa to use sedans to grow in U.S.

By John A. Russell
Staff Writer

ENGLEWOOD CLIFFS, N.J. —Breaking into the luxury performance sedan market is not simple, but within 18 to 24 months Alfa Romeo intends to enter this segment in what will be an entirely new approach for the company.

Until now, Alfa Romeo has been known for its sports cars in the U.S. though it markets a full line of sedans in Europe.

However, according to Ernesto Vettore, president of Alfa Romeo here, the sports-car market is limited and if the company wants to grow, it must introduce sedans. The initial announcement that the company would enter the sedan market was made several months ago.

Details are now coming to the forefront. There will be two sedans ranging in price from $14,000 to $25,000.

The lower-priced model, a four door powered by a 2.5-liter 6-cylinder engine, will be introduced first — probably in 1986. The second will follow in 1987 or 1988.

The second car will be Alfa's entry in the luxury sedan market. It will represent a breakthrough for the company in both marketing and engineering.

On the marketing side, it represents Alfa's move into the $20,000-plus sedan market which is dominated by the German manufacturers.

Alfa Romeo does not market such an upscale sedan in Europe. According to Vettore, it will be a front-wheel-drive car, but he declined to reveal any further details.

• Executives, both here and in Europe, indicated that these cars are being designed with the U.S. in mind.

As Vettore commented, "The U.S. now accounts for one percent of the Alfa Romeo production and is commanding 20 percent of the time and effort of the staffs in Italy."

The sedans are 18 months to two years away. Vettore and Joseph E. Cooley Jr., sales and marketing director, are using the time to revamp the organization in the U.S. as well as expand the current product lineup.

With only the Spider convertible and the GTV-6 coupe available, both men are focusing their attention on those two products.

The Spider will be expanded from one model to three over the next year. In June, the Spider Graduate will make its appearance at under $14,000.

This car represents a move to attract a "traditional" sports-car market of younger buyers.

It is a new marketing platform, according to Vettore and Cooley, an entry-level car without many of the standard equipment items of the current model such as power windows and leather interior.

For 1985, there will be a face-lifted Spider and another model added to the list. This top-of-the-line Spider will be loaded and include a custom hard top. With the three models, the Spider prices will range from below $14,000 to above $20,000.

Also in 1985, the company is planning "action" on the GTV-6. But neither of the men would specify what type of action may be taken.

However, some indication may be gained from the special edition Maratona which will be in dealer showrooms this month. Only 150 have been built and Cooley said all have been ordered by dealers.

"It is sold out," he said, on the wholesale level and some dealers already have advance orders for the car.

Listing for $21,000, the Maratona is a move by Alfa Romeo to spark interest in the GTV-6 with a design concept.

Fender flares, louvered windows, a new front spoiler and other features have been added to the basic car. And the work is being done in the U.S. at the port.

Don Black, chief of engineering here, said the cars are ordered with some of the normal treatment omitted so the work can be done here.

The goal was to create a lower-profile car without tampering with the mechanicals.

And it is at the port that another key element in the Alfa chain has been added — quality control. Before the cars are shipped to the dealers, a complete inspection and necessary work are done at the port.

Quality has become a key at both the factory and here. The Spider has been a major focus of this quality drive, and Vettore said the goal is to have a reputation for improved quality. This includes both the product and the dealer network.

There are now 117 dealers in the network and Cooley wants this raised to around 175 before the sedans arrive in the U.S.

Upgrading the dealer network as well as adding new, committed dealers is another task at Alfa, but Cooley and Vettore stressed that it is a slow process and cannot be rushed.

DeRollo is Pontiac dealer

Frank DeRollo, seated, signs a Pontiac dealer agreement for DeRollo Pontiac-Buick, Stockton, Calif. Pontiac San Francisco zone personnel witnessing the signing are Robert J. Durant, left, zone manager, and Gary G. Mattila, business manager.

May opens with 53-day supply

Domestic stocks' slide continues during April

Continued from Page 1

at 61 days compared with 57 a month earlier. The corporation's shortest line was the hot-selling Lincoln Town Car at 25 days.

Chrysler Corp. had a 66-day supply May 1, little changed from 67 days a month earlier. In shortest supply was Plymouth Gran Fury with a 21-day stock.

American Motors had an 87-day supply May 1, up slightly from 86 days, while Volkswagen of America had a 97-day supply of U.S.-built Rabbits, down from 100 days, and Honda had a 13-day stock of U.S.-built Accords, down from 20 days.

The May 1 domestic new-car inventory was divided this way: GM, 53.62 percent; Ford Motor Co., 26.01 percent; Chrysler Corp., 14.79 percent; AMC, 3.38 percent; VWoA, 1.78 percent, and Honda, 0.42 percent.

A month earlier, the domestic inventory was divided as follows: GM, 56.00 percent; Ford Motor Co., 24.45 percent; Chrysler Corp., 14.01 percent; AMC, 3.39 percent; VWoA, 1.67 percent, and Honda, 0.48 percent.

• By size class, subcompacts increased their supply during April, while compacts held steady and the bigger car segments dipped.

On May 1, the industry had the following days supplies by market class: Subcompact, 59; compact, 66; intermediate, 48; standard, 48, and luxury, 44.

The May 1 domestic inventory was divided this way among the market segments: Subcompact, 19.51 percent; compact, 27.83 percent; intermediate, 31.72 percent; standard, 12.54 percent, and luxury, 8.40 percent.

A month earlier, the inventory was divided as follows: Subcompact, 18.87 percent; compact, 26.91 percent; intermediate, 33.66 percent; standard, 12.16 percent, and luxury, 8.40 percent.

The May 1 days-supply figures by market class were:

Subcompact — Fiero, 12; Accord, 13; Horizon, 48, Omni, 51; EXP, 51; Escort, 59; Turismo, 61; Charger, 64; Chevette, 69; Pontiac 1000, 75; Daytona, 76; Laser, 76; Lynx, 83; Alliance, 87; Encore, 88, and Rabbit, 97.

Compact — Cavalier, 45; Firebird 52; LeBaron, 60; Mustang, 63; Reliant, 66; 2000 Sunbird, 67; Camaro, 68; Skyhawk, 68; Dodge 400, 69; Aries, 81; Firenza, 84; Tempo, 85; Eagle, 87; Topaz, 92; Capri, 103, and Cimarron, 124.

Intermediate — Cutlass Ciera, 31; Century, 33; Cutlass Supreme, 37; Marquis, 39; Pontiac 6000, 40; Celebrity, 42; LTD, 46; Citation, 47; Skylark, 49; Malibu, 52; Regal, 54; XR7, 59; Omega, 59; Dodge 600, 70; Chrysler E Class, 70; Grand Prix, 71; Bonneville, 72; Phoenix, 72; Thunderbird, 76; New Yorker E, 94.

Standard — Gran Fury, 21; Olds 88, 31; LeSabre, 36; Grand Marquis, 50; Crown Victoria, 54; Chevrolet, 57; Parisienne, 70, and Diplomat, 132.

Luxury — Lincoln, 25; Cadillac, 33; Electra, 35; Olds 98, 36; Seville, 43; Riviera, 45; Eldorado, 47; Corvette, 51; Toronado, 61; Mark VII, 94, and Continental, 94.

Memories for Vermeil

Pictured with Jack Lindsay, right, at the opening of Jack Lindsay Cadillac (formerly Webb Cadillac), Jenkintown, Pa., is Dick Vermeil, former Philadelphia Eagles head coach. Vermeil said he repaired cars like this 1941 Cadillac Fleetwood Derham sedan in his father's auto repair shop.

Import stocks rise in April; Japanese shipments resume

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars finally began climbing in April as Japan resumed shipments with the opening of a new year of voluntary restraints.

New imported cars in dealer and port inventories totaled 221,547 on May 1, a 33-day supply, compared with 212,315 a month earlier, a 27-day stockpile. A year ago, there were 294,703 new imported cars in stock, a 42-day supply.

The increase during April was due almost entirely to Japanese lines replenishing their dried-out pipelines, as the stock of German and other European cars declined during the month.

Even more dramatic was the turnaround in the inventory of new imported trucks — all Japanese-built — which jumped from 61,009 on April 1, a 25-day supply, to 82,378 on May 1, a 68-day stockpile. A year ago, there were 91,961 new trucks in stock May 1, a 78-day supply.

Much of the increase in the days-supply figure for Japanese cars and trucks was the result of the lower selling rate in April, caused by the depletion of stock.

The combined imported car and truck inventory May 1 totaled 303,925, a 37-day supply, compared with 273,324, a 27-day stock, a month earlier and 386,664 a year earlier, a 45½-day supply.

• The inventory of Japanese-built cars in the U.S. rose to 106,908 units May 1 from its lowest-ever level of 94,499 a month earlier. The May 1 stock of Japanese cars represented a 24-day supply, up from 16 days a month earlier.

Japanese nameplates and their May 1 days-supply figures were: Honda, 12; Toyota, 14; Mazda, 21; Subaru, 37; Mitsubishi, 39, and Isuzu, 111.

In addition, Chrysler Corp. had a 66-day supply of Mitsubishi-built cars, including Dodge and Plymouth Vista, 42; Dodge Colt, 53; Plymouth Colt, 57; Dodge Conquest, 71, and Plymouth Conquest, 79.

West German-made cars in inventory May 1 totaled 78,927, a 59-day supply, compared with Mercedes-Benz, 24; Porsche, 28; 84,116 April 1, a 67-day stock.

German nameplates and their May 1 days-supply figures were: Audi, 57; BMW, 59, and Volkswagen, 91. (The VW figure is for imports only; VW also had a 97-day supply of U.S.-built Rabbits.)

Days-supply figures for other European lines included: Jaguar, 18; Alfa Romeo, 24; Saab, 31; Volvo, 41; Peugeot, 48, and Renault, 267.

Days-supply figures for imported pickup trucks May 1 were: Mazda, 46; Toyota, 50; Nissan, 56; Mitsubishi, 63; Chrysler/Mitsubishi, 165, and Isuzu, 171.

Senate committee approves odometer anti-tampering bill

WASHINGTON. — An odometer anti-tampering bill has cleared the Senate Commerce Committee, carrying an amendment that calls for auto maker development and use of tamper-proof odometers.

The rollback-proof odometer amendment was added by Senator John C. Danforth, Missouri Republican and chairman of the Senate Surface Transportation subcommittee, to a bill introduced by Senator James J. Exon, Nebraska Democrat.

Supporters of Exon's bill agreed to the amendment with the provision it not be tied to a six-month deadline that specifies implementation, by all 50 states, of an on-title mileage record for all vehicles.

The Senate Commerce Committee's odometer legislation would require mileage readings printed in "bank note intaglio printing process" on the face of vehicle titles as a requirement of registration or transfer of ownership in all 50 states.

An odometer anti-tampering bill has been introduced on the House side, but no action has been taken on the matter.

The odometer registration bill is supported by the vehicle makers and auto dealers.

Auto industry witnesses have testified that a truly tamper-proof odometer may be an impossibility, but proponents of the standard argue that odometers can be made far more tamper-resistant than those currently being used.

Bonuses highlight Ford meeting

Continued from Page 3

of an incentive compensation such as profit sharing for all its employes, Caldwell said. General Motors has indicated it would negotiate for profit sharing instead of cost of living increases and annual improvement raises in the upcoming contract talks with the UAW.

However, Caldwell noted that profit sharing cannot be an "additive" thing.

"You can't have everything and profit sharing on top of it," he said. "You have to have a proper mix."

Caldwell wouldn't indicate the direction of car prices on 1985 models, but he said that car prices have gone up by one point less than the Consumer Price Index.

As for interest rates, Caldwell said the consumer confidence factor appears to be offsetting the rise in interest rates.

"I wouldn't want to see them go anything like they were before," he said. "Over 20 percent would be disastrous."

Cresong ready to go

NORTHFORK, W. Va. — Leonard C. Cresong has signed franchises to operate Gregory J. Chevrolet-Olds-Cadillac, Inc., here.

Dealer Investment opens new headquarters

INDIANAPOLIS.—Dealer Investment Service Co. has opened a 155,000-square-foot headquarters here.

The company provides products and services for improving the operations and profitability of its more than 1,000 automobile dealership clients.

Six weeks earlier than in 1983

Makers build year's 3-millionth car

By Joe Wilssens
Staff Writer

U.S. auto manufacturers reached another milestone last week as they assembled the three-millionth automobile of 1984. It was built last Monday (May 7), nearly six weeks earlier than in 1983. Last year, the three-millionth mark was reached June 16.

So far this year, the industry has completed 3,159,849 cars, 36.89 percent higher than last year's 2,308,371.

With overtime scheduled at 15 assembly plants last week, domestic auto makers slated production of 170,543 units, 3.00 percent greater than the prior week's 165,571 and 22.49 percent better than the year-ago week's 139,233.

Of last week's estimated car production in the U.S., General Motors accounted for 54.80 percent followed by Ford Motor Co., 22.97 percent; Chrysler Corp., 16.36 percent; American Motors, 2.82 percent; Honda, 1.67 percent, and Volkswagen of America, 1.38 percent.

The number of GM employes on indefinite layoff will drop to 46,000 this week, 1,000 fewer than last week. The workers are being recalled to a number of GM component plants to support planned assembly schedule increases, according to a GM spokesperson.

GM's Wilmington (Del.) plant completed its build of Chevette and Pontiac 1000 models last week and is expected to remain down until mid-August when the facility will begin production of B-cars. The plant conversion affects 3,300 workers.

GM led last week's overtime list with seven plants working two Saturday (May 12) shifts. They were: Arlington (Tex.), Fairfax (Kans.), Flint (B and G lines), Janesville (Wis.), Linden (N.J.), Pontiac and Lakewood (Ga.).

Ford scheduled Saturday overtime at its Atlanta, Kansas City and Wixom (Mich.) facilities last week.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two 9-hour daily shifts last week while Jefferson (Detroit) worked two 8½-hour daily shifts. Newark and both St. Louis facilities also scheduled two 8-hour Saturday shifts. Jefferson Assembly worked two 8½-hour Saturday shifts.

GM-Toyota venture taking applications for 2,500 jobs

FREMONT, Calif.—The joint venture between General Motors and Toyota, New United Motor Mfg., Inc. (NUMMI), opened its employment office here to applicants for the venture's 2,500 jobs, and 2,800 of the 5,000 former hourly employes at the huge GM plant here said they want to go back to work.

Tom Klipstine, NUMMI spokesman, said the company "has pledged that at least a majority of the employes to be hired will be veterans of the plant. If the various skills we need are not among the 2,800 applications we now have, we will look outside, but our first priority is to hire from the former work force."

Klipstine said the 2,800 applicants will be informed of the new company's hiring procedures no later than the end of May and that candidates for the first shift, which is expected to begin production in December, will be asked to attend summer pre-employment work training classes.

A second shift is expected to be added sometime during 1985.

The joint venture is filling foremen and sub-foremen jobs. Those who get those jobs will be called team and group leaders and as many as 300 supervisors will be sent to Japan for training at Toyota facilities there.

Team leaders, according to Klipstine, will be UAW members who will represent the hourly employes. Group leaders, Klipstine said, will be considered "management personnel."

Job applications from those who have not worked with GM here are being sent to the California Employment Development Department, which will help the joint venture in evaluating and training employes.

Truck production moves upward to 63,926 for week

With overtime scheduled at three assembly facilities, domestic truck manufacturers slated production of 63,926 units last week, 1.96 percent greater than the prior week's 62,700. The build was 23.98 percent higher than the year-ago week's 51,563.

So far this year, the industry has completed 1,173,431 trucks, a 46.36 percent improvement from 801,743 trucks assembled at this time in 1983.

General Motors scheduled two Saturday (May 12) overtime shifts at St. Louis and Janesville (Wis.).

Ford Motor Co.'s Kansas City facility also scheduled extra Saturday hours.

Canadian makers reach 1984 peak in car output

Canadian auto manufacturers stepped up production last week and slated their best weekly build for 1984.

Canadian auto makers estimated completion of 24,502 units last week, 3.53 percent greater than the prior week's 23,667. The total replaces the former 1984 peak of 24,166 cars finished during the week ended March 31. Although last week was a 1984 high, it was 12.48 percent below the year-ago week's assembly of 27,994.

To date this year, the manufacturers have finished 424,304 autos, 12.25 percent above 377,998 units completed during the same period in 1983.

Canadian truck manufacturers saw production slip slightly last week from the previous week, but it was still a substantial improvement over the year-ago week's build.

Truck makers targeted completion of 17,980 units last week, down 307 from the prior week's 18,287, but a solid 47.14 percent increase over the year-ago week's 12,220.

Year-to-date, 317,560 trucks have been completed, 62.51 percent higher than 195,414 finished during the comparable 1983 period.

Chrysler Corp. recorded a model year milestone May 9 as the 100,000th T-115 minivan was assembled at the company's Windsor (Ont.) plant. Two shifts are presently producing 912 vehicles a day, double the output before the second shift was added in January.

Chrysler estimated production of 2,286 Dodge Caravans, 2,274 Plymouth Voyagers and 912 Mini Ram Vans last week, bringing the year-to-date T-115 total to 85,615.

GM, Toyota set December for startup at Fremont plant

By Matt DeLorenzo
Los Angeles Reporter

FREMONT, Calif. — New United Motor Mfg., Inc. (NUMMI), last week announced it intends to produce its first car by December and introduced the management team at a press conference here.

Headed by President and Chief Executive Officer Tatsuro Toyoda, NUMMI is owned equally by Toyota Motor Co. and General Motors and has taken over the shuttered GM assembly plant to produce a small Corolla - class vehicle for distribution in 1985 by Chevrolet dealers.

The top management of the company has a decidedly Japanese look, with eight of the top 13 slots filled by personnel from Toyota. Only two of the officials are from GM with three coming from companies other than NUMMI's parents.

In addition to Toyoda, other officials coming from the Japanese car company include Kan Higashi, executive vice president; Kosuke Ikebuchi, vice president, manufacturing; Kiyoshi Hibino, general manager, inspection; Yasumasa Nishi, general manager, finance and treasurer; Nobuyoshi Nishioka, chief coordinator, engineering staff group; Koichiro Noguchi, general manager, purchasing, and Susumu Uchikawa, general manager, production control.

Joining NUMMI from GM are Robert Hendry, general manager, general affairs and comptroller, and Alan Perriton, advisor, materials management. Hendry formerly served on GM's Financial Staff, and Perriton was director, Materials Management Staff.

Gary L. Convis, general manager, plant; D. William Childs, general manager, human resources, and Dennis Cuneo, gen-

Rogers' Rascal

Three-wheeled prototype microvan

Rogers Intr Auto, Inc., Vancouver, B. C., is debuting this prototype three-wheeler, called the Rascal, at the Los Angeles Auto Expo this week. The 126-inch-long microvan rides on an 88-inch wheelbase. Production is scheduled to start next year. Story on Page 38.

breaking news

Dodge dropping Rampage

DETROIT.—Chrysler is planning to discontinue its domestic small Dodge Rampage pickup truck, beginning with the '85 model year. Dealers, who were notified last week, attributed the move to sagging sales and the vehicle's lack of clearcut identity as either a car or truck. The Plymouth version, Scamp, was discontinued last year.

Art Center to confirm Swiss campus

VEVEY, Switzerland. — Art Center College of Design, Pasadena, Calif., will shortly confirm details of the European campus it is to establish near here. The development appears set to become a serious alternative to the London Royal College of Art's Automotive Design Unit, the only one of its kind in Europe.

BMW forms high-tech venture

MONTVALE, N. J.—BMW of North America has formed a venture capital company called BMW Technology Partners to invest in high-technology industries applicable to its business. Partners are Churchill International, of San Francisco, and BMW Ventures, a subsidiary of BMW AG, as well as BMW of North America.

Cash incentive offered on Tempo, Topez

DETROIT.—Ford Motor is running a dealer cash incentive on Tempo and Topaz from May 11 to June 10. Dealers get nothing for 0-20 percent of a Tempo or Topaz objective; $250 per unit for 20-60 percent of objective, and $400 for 60 percent and over, nonretroactively.

U.S. dealer total continues to rise; up 7 for quarter

By John K. Teahen Jr.
Managing Editor

Reflecting the happy days in the auto industry, the number of dealerships handling domestic makes of passenger cars increased during the first quarter of this year.

The rise was small — only 7 outlets — but any upturn at all is unusual in the first three months of the year.

The latest Automotive News census found 20,848 domestic-car establishments in business on April 1, compared with 20,841 on Jan. 1.

It is the only first-quarter gain in the 23 years that Automotive News has been compiling dealer totals on a quarterly basis, and it's safe to say that there have been mighty few other years in "modern history" when the total has climbed in the January-March period.

Possibly in 1955 and/or 1950, when the dealer count went up for the full year, and certainly in some of the early post-World War II years when the manufacturers were rebuilding their retail organizations.

This year's rise of 7 compares with a dip of 48 in the first three months of 1983. The 1983 figure was encouraging since it followed first-quarter drops of 276 in 1982, 221 in 1981 and 258 in 1980.

• Last year, the industry trimmed its dealer loss to 28 in the second quarter and then had increases of 94 in the third quarter and 24 in the fourth for a full-year advance of 42 outlets. It was the first full-year gain since 1955.

In the first quarter of this year, Chrysler Corp. showed a rise of 30 outlets and Ford Motor Co. was up seven. There were slips of 15 for American Motors-Renault, 10 for General Motors and six for Volkswagen. Factoring in a change in the number of intercorporate duals gave the domestic industry a gain of 7.

The first-quarter advance marked the third consecutive quarter in which the domestic dealer count has climbed. At the risk of being repetitious, it's the only time that has happened in the 23 years for which quarterly figures are available.

In fact, there have been only five other quarterly upturns during those 23 years, and three of those occurred in 1963 and 1964. The others were the first quarter of 1973 and the fourth quarter of 1977.

All figures in this article and in the accompanying tables refer to the net change in the dealer population, both for the individual corporations and car lines and for the domestic industry as a whole.

• Franchise totals continued to grow in the first quarter of this year. Each of the Chrysler Corp. makes had a sizeable upturn, and there were advances for every Ford Motor Co. make and for four of the GM lines.

Plymouth fared best, adding 39 franchises, followed by gains of 36 for Chrysler and 35 for Dodge car. Mercury added 13 selling agreements; Ford car, 8, and Lincoln, 7. At GM, there were jumps of 10 each for

U. S. dealers complain they can't compete

More Americans shopping for new cars in Canada

By Richard Johnson
Staff Writer

Some U.S. dealers along the Canadian border have reported an increase in the number of U.S. citizens buying cars in Canada to take advantage of a favorable exchange rate and the lack of an import duty.

The

NEWSPAPER
AN

new along the border, but dealers is some areas—particularly in upper New York state and Maine—say crossover sales have picked up in recent months.

With the American dollar now valued at almost $1.30 against the Canadian dollar, spokesmen at some U.S. outlets say they with Canadian dealerships on certain models.

Depending on the car, U.S. dealers have cited price differences for customers ranging from a few hundred dollars to $2,500. An official with the Federation of Automobile Dealer Assns. of Canada (FADA) estimated that U.S. citizens can realize a savings of 8-10 percent on some cars.

The situation has prompted a few dealer organizations in the U.S. to contact both auto manufacturers and Washington lawmakers in search of a solution. But the matter has been overshadowed by the broader issue of overall U.S.-Canadian trade relations.

Purchases by U.S. citizens in Canada are already limited by differences in emission and safety standards between the two countries. Most cars sold north of the border cannot pass U.S. Customs without expensive modifications. But buyers can apparently reap benefits on cars which qualify for passage to the states without major alterations.

The 1965 U.S.-Canadian Automotive Trade Agreement basically allows Canadian vehicles to enter the U.S. duty-free so long as less than half the material value was imported to Canada from countries other than the U.S.

U.S. customers are entitled to a refund of Canada's 9 percent excise tax on vehicle purchases and may also apply for reimbursement of provincial sales taxes, which range from 7-9 percent, once cars are registered in the U.S.

But dealers in the U.S. have complained that retail trade terms between the two countries are not reciprocal. Although the U.S. implements a

35-hour week is chief issue

German strike leads to quick shutdowns

By Richard Feast
European Editor

STUTTGART, West Germany. — The year-long phoney war over working hours in West German industry ended last week.

A series of carefully aimed pin-prick strikes brought nearly all of the auto industry's production to a halt and hastened the prospect of wide-scale lockouts by employers.

The effect of the component strikes was very rapid. By Friday (May 18), the picture across Germany was bleak:

Audi—Closure on Friday.

BMW—Car production finished Thursday, motorcycle production Friday.

Daimler-Benz — Car production at Sindelfingen and trucks at Wuerth closed Thursday. Limited output of components at Unterturkheim and cars at Bremen. Bus production continues at Manheim with great difficulties.

Ford—Some production still possible, "but we don't know for how long," said a spokesman.

MAN—Production finishes today (Monday).

Opel—Center of Hesse action which begins today (Monday). No production likely.

Porsche—Production winds down at the end of today (Monday).

Volkswagen—Production possible today and tomorrow (Tuesday) but closure likely Wednesday.

The likely effects of the dispute should not be under-estimated. Within a few days the ripple will, for instance, reach tire makers in Germany, component buyers in Sweden and auto customers in the U. S.

Following last week's targets in the northern part of the state of Baden-Wurttemburg—Boscn and other suppliers—this week's focus is the giant General Motors plant belonging to Adam Opel in the state of Hesse.

What is at issue is the length of the working week. Many German unions want it reduced from 40 to 35 hours, something which they believe could cut the country's 2.4 million unemployment roll by half.

IG Metall, the world's largest union, is making the running. Its 2.6 million members are employed in the metal working industries, including the auto industry. But instead of calling a widespread strike, the union has concentrated its attack on the most prosperous locations —the states of Baden-Wurttemburg and Hesse — where unemployment is the lowest in Germany.

Areas of high unemployment, such as the Ruhr steel-making centers, are not targets.

• There is no doubt that IG Metall has selected its target very well. Around Stuttgart, the Baden-Wurttemburg capital, there are auto makers like Daimler-Benz and Porsche. There are component makers like Mahle (pistons), BBS (wheels) and Beahr (radiators). There is also Bosch.

Bosch is a major supplier of fuel systems and electrical equipment to vehicle makers around the world, not just in Germany.

The situation for auto makers is further aggravated by the recent adoption of lower component stocking. The use of Japanese-style daily deliveries gives the makers no buffer stocks on which to draw.

German laws do not allow unions to hit more than one state at a time. Thus, this week's concentration will be on Opel — currently still riding the crest of a European sales surge — and will return to Baden-Wurttemburg next week.

IG Metall is reputedly set for a long dispute. It is alleged to hold reserves of $725 million, with $165 million immediately available in cash. At present, it has to pay only those members directly involved in the dispute, around 13,000 in 14 factories.

• The real test will emerge when employers decide — as seems highly likely — on lockouts because the lack of components will not allow production to continue. Just who will pay those laid-off employes has not been established in German law. It is at this point, probably some time this week, that the episode will turn nasty.

Attitudes on both sides seem just as divided as when the shorter working week was first discussed during last summer's wage negotiations. It has been a constant topic ever since, and last fall's Frankfurt Auto Show was overshadowed by the protracted negotiations.

These are carried out in each state by the union, IG Metall, and the employers' federation, Gesamtmetall. Individual companies, such as those from the auto industry, are observers to the process.

It soon became clear that the auto industry would be the key thrust of the campaign. It employs some 680,000 people directly, a further 900,000 in supply companies and altogether affects one in seven of the population.

It has recovered well from the recession, and some companies are positively blooming. Of last year's total production of 4.7 million units, 2.37 million were exported. With a value of $26 billion, the sector is far more significant for the country's trade balance than any other.

• Employers say the 35-hour week — which is also combined with a wage increase of just over 3 percent — will increase costs by 16 to 20 percent. They say they cannot afford this extra burden to their competitiveness when it is not occuring elsewhere. At Opel and Ford they envisage customers turning to Japan: At Mercedes and BMW, they say would-be customers will slip away to Volvo and Jaguar.

In addition, employers maintain that while German industry wages soared in the 1960s and '70s — with the inevitable introduction of automation in the factories as a consequence—the education system was not producing enough engineers.

"Today in Germany we have too many teachers and not enough engineers," commented one company executive.

German politics are not usually enmeshed in industrial disputes. But in the run-up to the current confrontation the ruling center-right coalition led by Chancellor Kohl's Christian Democrats lined up behind the employers and the opposition SPD (Social Democrats) behind the unions.

With no established conciliation service in the country, there are few avenues to travel looking for any kind of settlement.

Nissan, mayors dedicate office

Mayors of three nearby communities helped Nissan officials dedicate the new Portland (Ore.) regional office of Nissan Motor Corp. in U.S.A. At open house ribbon-cutting ceremonies are, from left: Jim Darr, mayor of Hillsboro, Ore.; James Watson, Nissan's Portland regional manager; Frank Ivancie, mayor of Portland; Tetsuo Arakawa, president of Nissan U.S.A., and Jack Nelson, mayor of Beaverton, Ore.

Will curb bonuses, prices, outsourcing if UAW and U. S. do their part

Iacocca offers deal on auto issues

By Michelle Krebs
Financial Editor

Chrysler Chairman Lee Iacocca last week vowed to restrain executive bonuses, car prices and outsourcing if the UAW agreed to work-rule changes and the Reagan Administration addressed fair-trade issues.

In a speech to the League of Women Voters convention in Detroit, Iacocca called upon U. S. Trade Representative William Brock and other trade officials to hold a "woodshed talk" with the Big Three auto makers and the UAW.

"We've had enough rhetoric and enough finger pointing," he said. "It's time for some action.

"I'd like to find out where the Administration and the leaders of both parties really stand on jobs, prices and fair trade, and where General Motors, Ford and the UAW stand and what they're willing to contribute."

Iacocca proposed freezing car prices and outsourcing as well as restraining executive bonuses to half of what GM and Ford pay in bonuses. Chrysler executives have not yet received bonuses for 1983. A bonus proposal is on the ballot for the June 7 shareholders' meeting.

In return, Iacocca said he would expect work rule modifications from the UAW that would allow the auto maker to be more competitive. He also called upon the union to tie wage increases to productivity and quality improvements and "to get serious" about trimming medical costs, now averaging $600 on every car.

"I'm not talking about concessions or rollbacks. I just want to know that labor will pick up its part," he said.

• As for the Federal Government's role, Iacocca demanded that the issue of the "unfair playing field" — that of Japan's advantage because of the yen value and tax structure — be addressed.

While GM, Ford and Brock had no comment on Iacocca's remarks, the UAW issued a statement that "with some reservations," it supported Iacocca's general goals and would participate in discussions proposed by the Chrysler chief.

Iacocca also criticized the Reagan Administration and the news media for making a "war dance" of auto executives' salaries and bonuses.

Trade Representative Brock had blasted Ford and GM for the large bonuses and salaries paid to executives while the Japanese are voluntarily restraining the number of cars they export to the U. S. Brock, claiming the American public "was had" by the Detroit auto makers, suggested ending the import restraints.

"We got clobbered when we lost money, and we get clobbered when we make money," Iacocca responded.

He said the Reagan Administration should focus its attention not on the auto makers' salaries and profits but on the federal budget deficit and the trade deficit — "the national scandal."

14 pct. of Fiero sales clinched in California

ENCINO, Calif.—April Fiero sales totaled 1,368 in California and represented 14 percent of national Fiero dealer deliveries, Pontiac said.

Pontiac's overall daily selling rate in California was up 99 percent over April, 1983.

Volvo slates U. S. tour for futuristic LCP

DETROIT. — AB Volvo is sponsoring a U. S. tour for its advanced manufacturing showcase, dubbed the Light Component Project (LCP) — a high-tech tour de force it unveiled at the Geneva Auto Show in March.

With the LCP, Volvo joins the ranks of manufacturers seriously studying variations of the modular assembly concept now being embraced by General Motors in its Saturn Project and other future car programs.

IH to end production of gas-powered trucks

CHICAGO.—The International Harvester Truck Group will discontinue production of gasoline-powered trucks, Dec. 1.

"We have studied this option at length and believe that the commitment of resources to the IH diesel program is, in the long-run, serving the best interests of our customers," said Neil A. Springer, Truck Group president.

"Diesel engines offer a number of significant advantages over comparable gasoline-powered engines," Springer added.

"Our experience has proven that diesels provide more usable power at lower engine-operating speeds, offer a considerable fuel-savings advantage, and cut maintenance costs since they don't require tuneups of the type normally associated with gasoline-powered alternatives."

"Finally, because diesels are more durable, they offer a longer service life and higher resale value," he said.

Another consideration involves the impact of future EPA emission standards on tomorrow's gasoline engines.

"With substantial investments, the EPA standards can be met, but it appears so only at the expense of fuel economy, performance, reliability and durability," Springer said. "We feel such sacrifices do not serve the best interests of the truck-buying public."

He said a complete family of International mid-range diesel alternatives will be available in 1985, consisting of four different horsepower offerings of the IH DT-466, two versions of the IH 9.0-liter diesel, and two horsepower offerings of the 6.9-liter mid-range diesel.

The Truck Group also will cease production of two V-8 gasoline engines at the Indianapolis plant which manufactures the 6.9-liter diesel.

Target is 40 to 50 pct. local content, Runyon says

Nissan details plans for Smyrna

By Marjorie Sorge
Labor Editor

The Nissan Sentra to be assembled at Nissan Motor Mfg. Corp.'s plant in Smyrna, Tenn., beginning next April will initially have 40 to 50 percent domestic content, according to NMMC President Marvin T. Runyon.

Runyon told AUTOMOTIVE NEWS that NMMC is "shooting for" that percentage when production begins and hopes to increase the content as quickly as possible. Trucks currently produced at the plant have 42 percent U. S. content.

NMMC plans to go to its current U. S. suppliers first to see if they can produce the products for the Sentra.

Engines for the car will be made in Japan while engines for the trucks will come from Nissan's new plant in Mexico as soon as that plant begins production, Runyon said. There are currently no plans to import the car engines from Mexico.

According to Runyon, it is not economically feasible to add an engine facility to the Smyrna plant until production reaches 350,000 to 500,000. The current annual capacity at Smyrna is 240,000, which it plans to reach in mid-1987.

Stampings for the Sentra will eventually be totally produced at Smyrna, but initially they will come from that plant as well as Nissan facilities in Japan, he said.

The move to produce cars at Smyrna is part of Nissan Motor Co.'s worldwide plan of becoming an international company, which will build more vehicles overseas and adopt more joint ventures, Runyon said. Nissan wants to take 10 percent of the world market by 1990, he said.

• According to Runyon, the Voluntary Restraint Agreement (VRA) had no bearing on the company's decision to build cars at Smyrna.

The Smyrna plant will be building cars and trucks on the same line on one shift beginning next April and hopes to add a second shift in September, 1985. Runyon said the ideal situation would be to have separate lines, but that change will depend on the marketplace.

Running both the Sentra and the small pickup truck on one line poses a slight problem since the car is front-wheel-drive and the truck is rear-wheel-drive. RWD engines have traditionally been inserted from the bottom while FWD engines are placed from the top.

When cars are added to the plant, truck production will be reduced to allow for the Sentra output, but Runyon emphasized that that move is not because truck sales are faltering.

He said Nissan sold 137,000 trucks in 1983, up 27 percent from the previous year. Sales have continued to be good in 1984. In February, Nissan sold 23,028 trucks and in March it sold 22,769.

While it will be another two years before NMMC sees a substantial profit, Runyon said the company will see a slight profit next year. He said the addition of the Sentra will help increase that profit because it will keep the fixed costs down and the volume up.

Adding the Sentra will also require hiring an additional 1,100 workers. Some maintenance technicians will be hired within the next few months and some of them will be sent to Japan to study as Nissan did with many of the workers hired for the truck operation.

So far, no decision has been made on how many will be sent or where they will be trained, Runyon said. Nissan builds the Sentra at its Zama and Murayama plants.

• Besides adding a new vehicle to the Smyrna operation, few other things will change. Runyon will be in charge of both the truck and car operations.

Like the truck, the Sentra will be priced the same as its Japanese sister. And, again like the truck, Sentras built at Smyrna will be sold basically east of the Rocky Mountains. The rest of the nation will sell Sentras imported from Japan.

The Smyrna plant will never build the total volume of cars needed for the U. S. market so, in case of a downturn, there will not be a need for layoffs, Runyon said. The Japanese-built vehicles will make up the rest of the sales need.

There are currently no plans to build any other models in the U. S. but there is plenty of room on the 782-acre site to expand the plant.

According to Runyon, the paint plant can be doubled without touching the original facility and, if production should be increased over the current 240,000 annual capacity, another trim and chassis plant would have to be built. There is also more than enough room to expand the stamping operation.

Meanwhile, the Smyrna plant remains non-union and there has been little interest on the part of workers in organizing. But UAW Vice President Stephen P. Yokich, head of the UAW organizing department, maintains the plant will be organized in the future.

Special car for special kids

Bonnie Quantrell, president of Quantrell Cadillac, Lexington, Ky., presents the keys to a 1984 Sedan DeVille to Pete Owens, chairman of the Kentucky Special Olympics. Attending the presentation along with six special Olympians were: Rep. Larry Hopkins, left, Kentucky Republican, and Dave Kirchner, executive director, Kentucky Special Olympics.

Pontiac expects big volume for its new '85 Grand Am

By Joseph Bohn
Marketing Editor

Pontiac sees an opportunity to make Grand Am its second-best selling car in '85 and its volume leader in the "not too distant future," according to Ed Benson, assistant general sales manager.

That's one of the reasons it will throw more advertising/marketing weight behind the new sporty model than last fall's splashy Fiero introduction.

The Grand Am is one of the GM20 cars that will go on sale this fall.

The total market for a car like Grand Am, Benson said, is 5-5½ times larger than for a Fiero-type vehicle.

But, at the same time, the 25-to-44-year-old "new values" group it's aimed at will be a tough sell. Some 60 percent consider imports, and 40 percent buy them, Pontiac research indicates.

This time out, too, Pontiac doesn't have the volume of advanced press it had with Fiero.

The latter's revolutionary production techniques and design captured considerable attention from the business, enthusiast and auto press for 1½ years before its introduction "which did an awful lot of the (communications) job for us," Benson noted.

By contrast, he characterized Grand Am as "more evolutionary than revolutionary. On that basis, we have a tremendous communications job in its segment of the market."

Some observers feel that Pontiac (and other GM divisions) may hedge their advertising bets this fall, because of the possibility of a strike. But Benson said that wasn't the case.

"The only thing we can do is plan for uninterrupted production. We cannot and wouldn't hedge," Benson said, adding it would be "foolish" to plan an interruption.

He added that "contingencies worked into arrangements on media buys" generally help protect advertisers such as Pontiac from big losses in case of unforeseen events like a strike.

Honda reaches capacity output at Ohio plant

MARYSVILLE, O. — Production at the Honda automobile plant here has attained full capacity of 600 cars per day, on two shifts, for a rate of 150,000 units annually.

The $250 million facility, which began production in November, 1982, produces three-door and four-door Accords on two shifts. Total employment of Honda of America, including motorcycle production, is now 2,300.

Honda recently began work on a $240-million, 700,000-square-foot expansion of the automobile plant. When it is completed in 1986, Honda will be manufacturing the Civic model, in addition to the Accord.

12 GM dealers stage 5th annual Silverdome Sale

PONTIAC. — Twelve dealers in this area staged their fifth annual GM Dealers Silverdome Sale last week.

Russ Shelton, Shelton Pontiac, Rochester, chairman of the event, anticipated selling a record 1,000-plus cars and trucks during the event. The previous high mark was 827 units sold in 1980.

The sale featured radio personalities, entertainment and 1,500 new GM vehicles on display.

As part of the hoopla, dealers released helium-filled balloons worth $150,000 in discounts. Each balloon was tagged with a card worth $100 to the finder toward purchase of a new vehicle, according to Al Dittrich, co-chairman and owner of Al Dittrich Oldsmobile, Pontiac.

New-car sales climb again; travel rate tops 9 million

By Jenny L. King
Staff Writer

New-car sales in early May climbed some 70,000 units above the total for the same period one year ago and were travelling at a rate in excess of nine million.

Ford Motor Co. paced the major U. S. auto makers with its 53.31-percent sales increase May 1-10. The domestic industry's total for the period was the best since 1979, and year-to-date sales were 33.93 percent ahead of the 1983 figure.

Retail deliveries in the first May period this year numbered 238,240, up 41.15 percent from 168,785 in 1983. The recent period had the advantage of an extra selling day — 9 vs. 8 a year earlier—and the daily rate of 26,471 was up 25.47 percent from 21,098.

Ford Motor Co. reported sales of 54,537 new passenger cars, up 53.31 percent from 35,574. General Motors sales were up 45.09 percent, to 148,431 from 102,302. Chrysler Corp.'s 26,359 total was up 15.93 percent from 22,737.

American Motors reported estimated sales of 4,050 AMC and domestic Renault products, down 20.59 percent from 5,100. Honda was up 147.90 percent, to 3,126 from 1,261, and Volkswagen slipped 4.09 percent, to 1,737 from 1,811.

• GM climbed to 62.30 percent of the domestic market for the period from 60.61 percent in 1983. Ford climbed 22.89 percent, up from 21.08 percent. Chrysler sales accounted for 11.07 percent, down from 13.47 percent.

AMC dropped to 1.70 percent from 3.02 percent of the market; Honda had 1.31 percent, up from 0.75 percent, and VW dropped to 0.73 percent from 1.07 percent.

Oldsmobile set a record for the period with sales of 38,062, up 44.84 percent from the year-ago 26,278, and demolishing the former record of 32,639 set in 1978.

Other GM makes scored well, if short of records: Buick was up 11.64 percent, Cadillac was up 24.30 percent, Chevrolet was up 65.43 percent and Pontiac was up 64.67 percent.

At Chrysler Corp., Plymouth sales were down 15.71 percent, Chrysler was up 48.82 percent and Dodge was up 34.26 percent.

Ford was up 42.87 percent, Mercury was up 74.70 percent and Lincoln was up 91.19 percent.

Whereas Renault was up an estimated 7.58 percent, AMC plunged 72.22 percent. VW dipped 4.09 percent and Honda more than doubled its sales, to 3,126 from 1,261.

Year-to-date sales reached 2,953,667, up 33.93 percent from 2,205,357. The annualized figure, based on May 1-10 sales, stood at 9.6 million domestic units.

Hoernig to head Mercedes R&D

STUTTGART, West Germany. — Daimler-Benz has named Rudolf Hoernig a member of the board of management for research and development.

He succeeds Werner Breitschwerdt, who was named chairman in December.

Sports/utility vehicle joins Toyota lineup

A sports/utility vehicle called the 4Runner has been introduced in the U. S. by Toyota Motor Sales, U.S.A., Inc. There are two models, a deluxe truck version with seating for two and an SR5 passenger-car version that seats five. Both models feature a removable rear top.

Toyota 4Runner eyes sports/utility buyers

TORRANCE, Calif. — Toyota's new 4Runner sport/utility vehicle combines the benefits of a station wagon with those of the firm's compact 4x4 pickups.

The 4Runner will be available in a deluxe truck version that seats two, and an SR5 passenger-car version that seats five.

It features the aerodynamic front-end styling of the Toyota 4x4 truck, a detachable rear top, large glass area, steel roll bar, and a rear power window that lowers into the tailgate.

The 2.4 - liter, four - cylinder, overhead-cam engine found in Toyota 4x4 trucks also powers the 4Runner.

Toyota said its research indicates sports/utility truck buyers are slightly older and more likely to be married than its 4x4 customers. However, the company said there is enough overlap in the demographics of both classes to assure the 4Runners' appeal to many customers looking at Toyota's four-wheel-drive trucks.

• "Nearly 30 percent of our 4x4 truck buyers report that they either bought their truck with a camper shell installed by the dealer or had one installed later," said Warren Christell, marketing vice president, Toyota Motor Sales, U.S.A., Inc.

"We think the 4Runner models are right on track for those buyers and for families who want the extra passenger carrying capability of a station wagon in an off-road tough 4x4."

He added that "industry sales forecasters predict that the sports/utility market will expand in the next few years by nearly 50 percent. And a majority of that expansion will be in

April 13-16 — 22nd Annual Convention & Exposition, NADA American Truck Dealers Division, Sheraton Washington, Washington, D.C.

truck industry news

Total climbs to 1,333,796, up 2.3 pct. over 1978 mark

4-month truck sales hit new high

Four - month sales of new trucks of all types in the U. S. reached their highest level in industry history, and the April total was the second-highest for that month.

During the January-April period, according to factory and distributor reports, franchised dealers and factory outlets retailed 1,333,796 units, up 2.3 percent from the previous high of 1,303,947 established in 1978 and 45.2 percent above last year's 918,605 units.

In April, 350,230 new trucks were retailed, an increase of 39.8 percent over the year - ago 250,476 units. The alltime April high of 362,951 sales also was set in 1978.

If sales continue at the April rate for the final eight months of calendar 1984, the total could top the four-million mark for the second time and exceed the record 4,108,096 sales achieved in 1978. At the April pace, the total would approximate 4,135,-625 units.

Sales were up sharply in all three market segments in the first four months and in April.

• Through April, retailers sold 1,253,987 light trucks, an increase of 45.7 percent over last year's 860,610 units. Heavies were up 42.2 percent, 62,201 versus 43,733, and the mediums hit 17,608 units, 23.5 percent higher than the year-ago 14,262.

During the month, light-truck sales totaled 326,567 units, up 38.8 percent over the year-earlier 235,252. Heavies were up 64.8 percent to 18,814, compared with 11,415 a year ago. Mediums totaled 4,849, a gain of 27.3 percent over last year's 3,809.

Compact trucks of all types, domestic and imports, increased their share of the light-truck total for both April and the four-month period.

April sales of 140,427 compacts accounted for 43 percent of the light-truck total and were 70.9 percent higher than the year-earlier 82,159. In 1983, the downsized units took 34.9 percent of the light-truck count.

Through April, compact sales totaled 540,219 units and accounted for 43.1 percent of the light-truck total. They were 75.8 percent higher than the 307,301 units sold in the like period in 1983. Last year's four - month total accounted for 35.7 percent of the light-truck sales.

Domestic compacts increased their share of the small - truck market during the month and for the January-April period.

Dealers retailed 99,640 small trucks in April for 71 percent of the total, compared with 62.6 percent a year ago with 51,444 sales. April sales of the imports totaled 40,787 units, versus 30,-715 last year.

Through April, the 358,592 domestic compact sales accounted for 66.4 percent of the small-truck total, compared with 57.5 percent on 176,723 units in 1983. The import count was 181,627, up from the year - earlier 130,-578.

Chevrolet truck sales in April topped Ford for the first time this year, but Ford held the

Two air suspensions introduced by Neway

ANAHEIM, Calif.—Two new air suspensions, one for on-highway truck drive axles, and the other for on-road trailers, were introduced by the Neway Division, Lear Siegler, Inc., at the International Trucking Show here.

Both suspensions—the ARD-238 drive-axle and the AR-90 trailer unit — are lighter in weight, lower in cost and have design features that reduce maintenance, according to John Conley, Neway sales/marketing vice president.

He said use of high-strength, low alloy steel keeps the suspension weight down to 680 pounds for the tandem unit and 340 pounds for the single, and the rigid trailing arm contributes to the suspension's strength and long life.

"Neway's patented Smart Nut provides a positive clampload that extends pivot bushing life," Conley said, "and the suspension also incorporates a rubber-bushed, single-pin axle connection which users say has logged more than 500,000 miles of trouble-free service.

"Compatible with disc brakes and automatic slack adjusters, the ARD-238 has a patented axle - alignment feature which allows for easier installation and simplifies field alignment if necessary," he added.

The tandem-axle suspension has a capacity of 38,000 pounds and the single-axle capacity is 20,000 pounds, and is available as a truck-factory-installed unit or through Neway distributors.

Conley said the AR-90 trailer suspension makes optimum use of the rigid trailing arm and a unique top-mount design to reduce weight without sacrificing stability or durability.

"The AR-90-14 has a 14-inch ride height and weighs 389 pounds, while the AR-90-17 weighs 443 pounds and has a 17-inch ride height," he said. "The suspension has a capacity of 22,500 pounds."

The trailer suspension also uses the Smart Nut, which Conley said "helps extend both pivot and axle connection busing life."

Both the rear-drive axle and trailer suspensions are warranted for 100,000 miles, and the rigid trailing arms for three years or 250,000 miles.

Rockwell extends axle exchange through April, '85

TROY, Mich. — Rockwell International's On-Highway Products Operations has extended its "Carrier (axle ratio) Exchange Program" through April, 1985, and will add six of the firm's more popular axles to the program.

The program now covers 10 axles. They are the H-172, H-173, L-172 and R-170 single rear axles, and the SL-100 SL-100P, SQ-100, SQ-100P, SQHP and SSHD tandem axles.

Rockwell said the exchange program allows truck dealers to quickly obtain a gear carrier that meets a customer's needs, so that the dealer can make a sale that might otherwise have been lost.

When faced with a right-truck, wrong-axle situation, a dealer calls Rockwell's Service Parts Distribution Center in Florence, Ky., and requests the carrier with the axle ratio specified by the customer.

The carrier is shipped FOB immediately to the dealer. The dealer replaces the existing carrier and returns it to the Florence facility within 30 days.

Causes shortage of emergency, recreational vehicles

Lack of Ford vans, cutaways hurts

By Arthur M. Flax
Assistant Truck Editor

Demand for Ford vans, and the cutaway chassis in particular, has caused a critical shortage among manufacturers of emergency and recreational vehicles.

The cutaway model, according to David Tarrant, Ford Division recreational vehicle sales manager, OEM, is in particularly short supply because Budd Co., which previously supplied Ford with dual wheel assemblies, dropped out of that business. Firestone Steel Products now is Ford's only supplier, he said.

Tarrant said production of cutaways has been cut from nine per hour to less than five.

Ambulance makers say the Ford cutaway is ideally suited to their industry because it is available with a more powerful engine and higher GVW rating than its competitors. Ford vans also are popular among ambulance builders.

Ford estimates the ambulance market at 4,500 units a year, 3,-000 of which are supplied by Ford.

• "It's been difficult to get a handle on the ambulance market," Tarrant said. "There are a lot of small builders scattered around. We've done a survey and found there are 25 active ambulance builders."

Normally, he added, Ford doesn't get involved with the smaller builders. They buy equipment directly from the dealer, he explained, while larger builders receive consignments based on past purchases and other factors.

Several weeks ago, however, Ford formed a special committee to give priority allocations to special cases — emergency vehicles and in several instances, vehicles for the handicapped.

In addition, Tarrant said Ford has plans to step up cutaway production in September, and again next January. By that time, Ford should be able to meet demand for its cutaways, he said.

Tarrant also predicted production of Ford's Aerostar minivan next year also would free up capacity for commercially used full-size vans.

"Production on all Econolines is 51 per hour," he said. "That's faster than we originally thought we could build them. We're running flat out."

• Tarrant admitted that Ford has experienced some spot component shortages, notably transmissions and rear ends.

Some ambulance manufactur-

Not a good choice for fleets, Runzheimer concludes

Study notes cost penalty for turbo

By Francis J. Gawronski

Fleet operators will probably pay more in annual costs if they choose a turbocharged model, according to a cost analysis by Runzheimer Reports on Transportation, the fleet industry newsletter published by Runzheimer & Co., Inc., Rochester, Wis.

"Even in the case of the Thunderbird, where we've placed a four-cylinder, 2.3-liter turbo against the six-cylinder, 3.8-liter normally aspirated engine, the Turbo coupe comes to rest at a higher cost, a $580 difference, than its companion," Runzheimer said (see table).

Among companion cars with the same engine sizes, the cost differences remain significant, Runzheimer said.

The six-cylinder, 3.8-liter Buick Regal exhibits a $517 annual cost difference between the turbo and non-turbo models; the Dodge 600 has a $175 annual price gap; and the Ford Escort GT has a $209 cost difference annually between the turbo and non-turbo models.

Runzheimer said that the turbocharged models now being offered by the auto makers "will remain a high-performance sport option or an answer to fuel economy in the larger, executive-type cars. For corporate fleet cars, turbocharging is mere performance puffery."

The major advantage of turbocharging is that it obtains V-8 performance while approaching four-cylinder fuel economy, Runzheimer said, while the major disadvantage in addition to higher costs is more engine components which invariably lead to more mechanical problems.

"A turbocharged car is stuffed with enough extra hardware, gizmos and gadgets to send mechanics scrambling for textbooks," Runzheimer said.

• Elsewhere, Patrick J. Sheehan, corporate fleet manager, Baxter-Travenol Laboratories, Inc., Deerfield, Ill., was reelected president of the National Assn. of Fleet Administrators (NAFA).

Other officers elected for the coming year include Helen Bland, fleet manager, Hallmark Card, Inc., of Kansas City, first vice president; Frank Kraus, automotive administrator, Lever Bros., Inc., New York, second vice president; William J. Gravesmill, assistant manager support services, Fremont Indemnity Co., Los Angeles, secretary, and W. Eugene McCook, director of treasury services, A. H. Robins Co., Richmond, Va., treasurer.

Because of the early retirement of C. Holton Jr., corporate fleet administrator, Libby-Owens-Ford Co., Toledo, and former third vice president, Sheehan appointed J. Paul Hubbard, administrative services manager, Imperial Tobacco, Ltd., Montreal, to that post.

Don Steven, leased vehicle coordinator, Imperial Oil, Ltd., Toronto, was then named to replace Hubbard as vice president of Canada.

NAFA trustees include Don Allen, corporate fleet manager, Gerber Products Co., Fremont, Mich.; Ken Austin, manager administrative services, G. D. Searle & Co. of Canada, Ltd., Oakville, Ont.; Robert E. Davis, manager, automotive fleet, Consolidated Gas Transmission Corp., Clarksburg, W. Va., and Helen Smorgans, automobile fleet manager, Johnson & Johnson, New Brunswick, N. J.

Claude Harwood was reelected president of U-Save Auto Rental of America, Inc., Salisbury, N. C. Zane Ketner, cofounder with Harwood of the rental franchise system, continues as secretary-treasurer of the firm.

Reelected as board members were Jim Delp, Lincoln, Neb.; Joe Eikenberg, Essex, Md.; Bob Snider, Titusville, Fla., and Travs Tefft, Marion, O.

Founded in 1978, U-Save has grown to 250 used-car rental franchises in 30 states.

RUNZHEIMER CAR COST ANALYSIS

Projected Average Annual Ownership and Operating Costs For Selected 1984 Models
(Turbocharged vs. Normally Aspirated)

Honda, Austin Rover sign XX car manufacturing pact

TOKYO.—As expected, Honda and Austin Rover Group executives signed a manufacturing agreement for the XX executive car in London, but little was said about what really will happen.

In Tokyo, Honda spokesmen said that Honda would produce its version of the XX car at the Sayama plant in late 1985 at the initial rate of 40,000 units a year — rather a low volume, even for this size of car.

Honda expects to sell 15,000 units in Japan, which seems a realistic figure, although it no doubt expects to push this up over 20,000 in due course.

In addition, about 20,000 units will be exported to the U. S. in the first 12 months of production and 5,000 units to other countries.

Then, Honda will produce the Rover versions for sale in Japan and although the company is not prepared to indicate the volume, it seems likely that 2,000-5,000 units a year is involved.

Honda will build Rover versions that are to be exported to Australia — it is already shipping about 1,000 Quintet 1.6-liter five-door hatchbacks annually.

These are sold as Rovers by Leyland Australia, and it is expected that a similar volume of XX cars will be shipped. However, Honda will not start producing the Rover cars until 1986.

To cope with the new model, Honda is investing $20 million at the Sayama assembly plant and $30 million at the Wako engine plant, where the new V-6 engine will be built. Some of the investment will go toward increasing production of the Accord engine.

Chrysler links tool, pilot work at Detroit plant

DETROIT. — Chrysler Corp. is establishing a new Tool, Die and Pilot Production Operation at its Outer Drive Manufacturing Technology Center here.

The new operation consolidates for the first time under one roof all stamping and assembly tool and die tryout and new model pilot car production formerly performed at the Vernor plant and the Clairpointe Pre-Production plant in Detroit.

Directing the new operation will be James P. Clancy, who was appointed manager of Stamping Production Engineering operations. He reports to Bryan P. Prucher, manager of the company's Production engineering operations.

Raymond J. Waelchli has been named manager of the Tool, Die and Pilot Production Operation at Outer Drive.

Clancy, 47, has been manager of the Outer Drive Tool and Die Plant since 1983. He joined Chrysler in 1955.

Waelchli, 49, has been manager of advance manufacturing engineering planning and control for Chrysler's Stamping and Assembly Group since 1981. He has been with the company since 1966.

Marten's Subaru opens

ANNAPOLIS, Md.—Marten's Subaru has opened here. Stuart Marten is the owner.

#7984

Total climbs to 1,333,796, up 2.3 pct. over 1978 mark

4-month truck sales hit new high

Continued from Page 16

four-month lead by more than 7,700 units.

During the month, Chevrolet dealers sold 103,113 new trucks, an increase of 23.4 percent over last year's 83,538. Through April, the total was 373,912, a gain of 27.4 percent over the year-earlier 293,506.

Ford reported 101,300 retail sales in April, 37.4 percent higher than the previous year's 73,710. The four-month total of 381,621 units was up 32.9 percent from last year's 287,257.

Sales of Dodge and Plymouth trucks were up drastically for both April and the four months due to the strong demand for the compact vans.

• During the month, dealers sold 48,543 new trucks, an increase of 91.6 percent over last year's 25,337. The January-April total was up 108.7 percent to 176,536 units, compared with 84,596 a year ago.

GMC dealers retailed 27,056 vehicles in April, up 15.3 percent over the year-earlier 23,458 units. The four-month total of 105,891 units was 28.8 percent higher than the 82,200 sold in the like period in 1983.

Downsized Jeep wagons led to sharp gains in sales of the 4x4 sports/utility vehicles in April and the four-month period.

During the month, dealers retailed a total of 12,457 vehicles, an increase of 94.1 percent over last year's 6,417. Through April, the count was 47,005 units, up 114 percent from the previous year's 21,963.

Only 35 of the discontinued compact Volkswagen pickup trucks were sold in April, compared with 466 a year ago. The four-month count was 280, versus 2,043 in the comparable period a year ago.

Significant gains for both April and the first four months were reported by distributors of the Japanese-built compact trucks.

In April, Toyota dealers sold 15,359 units, up 26.5 percent over the year-ago 12,138. The four-month count was 58.2 percent higher than last year, 73,943 versus 46,733.

• Nissan/Datsun dealers retailed 13,307 trucks during the month, up 50.2 percent over last year's 8,862 units. Through April, the total was 99.1 percent higher than a year ago, 72,492 versus 36,405.

Of the month's Nissan/Datsun truck sales, 5,724 were models produced at the plant in Smyrna, Tenn. The four-month total for trucks assembled in the U. S. was 33,070.

April sales of Mazda compact pickup trucks were up 129.7 percent to 9,549 units, compared with 4,157 a year ago. The January-April total was 40,318, an increase of 91.4 percent over the previous year's 21,070 units.

During the month, Isuzu dealers retailed 3,680 small trucks, a gain of 66.2 percent over the year-earlier 2,214. The total through April was up 34.4 percent to 9,580 units, compared with 7,130 in 1983.

In April, Mitsubishi pickup-truck sales totaled 1,010 units, an increase of 71.2 percent over the year-earlier 590. The four-month total was up 84.7 percent, from 2,550 units a year ago to 4,710.

Subaru honors top salespeople from 13 districts

PENNSAUKEN, N. J. — Subaru of America honored the top salesperson from each of the 13 Subaru distributors in the continental U. S. at an awards ceremony and conference at company headquarters here.

During their three-day stay here, the salespeople toured company headquarters, held discussions with Subaru executives and attended the Broadway show My One and Only.

The top Subaru salesperson in the U. S. during 1983 was Louis Bryan, Hillside Subaru, Hillside, N. J.

Others inducted into the Circle of Stars sales club are: Brian Billingham, Mastro Subaru, Tampa; Richard Chakrin, Patrick Motors, Worcester, Mass.; Gary Clements, Southern Subaru, San Antonia, and Joel Draper, Key Subaru, Columbus, O.

More are: Dennis Goodrich, Continental Motors, Anchorage, Alaska; Ron Levine, Subaru in Evanston, Evanston, Ill.; Constance Link, Dunphy Subaru, Philadelphia; Wayne Hill, C&T Subaru, Johnson City, Tenn., and Bob Petro, Subaru of Pasadena, Pasadena, Calif.

Rounding out the group are: Edward Szuch, Burt Subaru, Englewood, Colo.; Patrick Whiteman, Manhattan Subaru, Rockville, Md., and Ed Wondolowski, Nohr's Imports, San Leandro, Calif.

Frost Motors celebrates 50 years as Cadillac deal

NEWTON, Mass. Frost Motors, Inc., here is celebrating its 50th year as a Cadillac dealership with a "series of spectaculars."

To kick off the observance of its golden anniversary, Frost sponsored the "Cadillac Sale of the Century," for which the dealership purchased 50 DeVilles, all with special features, and offered them at a low price in a 50-hour nonstop marathon sale.

Each DeVille represented up to $5,000 in savings for the customer, according to Thomas D. Keery, dealership president. In the first four hours of the sale, Keery said, Frost Motors eclipsed its alltime high for sales during a single business day.

Another event found Frost hosting Cadillac owners, local dignitaries and members of General Motors management at a champagne reception. Making special appearances for the evening were vintage Cadillac convertibles, tourers and dual-cowl phaetons.

For the summer, the dealership plans a "50-Year Cavalcade of Cadillacs" — a concours d'elegance of Cadillacs covering the last half-century of production, according to Keery.

The Keery family is in its third generation at Frost Motors, which was established by Percy (Jack) Frost. The first Keery at the dealership was Tom's father, Thomas (Russ) Keery, who joined the dealership as its general manager after World War II.

Russ Keery gradually expanded his role to managing the dealership in its entirety. When Frost retired in 1957, he assumed ownership. The first-generation Keery retired from the business in 1978, passing ownership along to Thomas D. Keery, who had joined the dealership in 1947.

Currently, a third-generation Keery, Thomas R. Keery II, serves as vice president and general manager at Frost Motors.

Lotus wins appeal of tax bill for $119 million

LONDON.—Group Lotus and Lotus Cars won their appeal of a tax bill of $119 million.

The assessment was unrealistically high. It was clear that Inland Revenue's real intent was to find $17.6 million of investor and UK Government funds to the DeLorean car operations. The trail of the money disappeared somewhere between DeLorean and Lotus, which helped design the car.

General commissioners for income tax for Wymondham, Norfolk, dismissed all assessments against Lotus after five days of hearings, Lotus said.

The ruling came after heavy agitation for dismissal by Lotus Chairman David Wickins.

Japanese fill 8 of top 13 management jobs

First GM-Toyota car due in Dec.

Continued from Page 1

eral counsel and secretary are from outside the two companies.

Convis was assistant plant manager for Ford's Lorain (O.) assembly plant; Childs served as corporate director, labor relations for General Dynamics, and Cuneo was an attorney in Washington.

• According to NUMMI officials, the hiring process has begun and more than 3,000 applications have been returned from the 5,000 mailed out to the plant's former workforce earlier this year.

Approximately 1,000 workers will be employed by the end of the year on one shift. During the following year, the number is expected to increase to 2,500 on two shifts as the plant moves up to its capacity of 200,000 cars annually on one line.

Bruce Lee, regional director of UAW Region 6, and William Usery, a former secretary of labor who helped negotiate a letter of understanding between NUMMI and the UAW that ensures that former union workers from the Fremont plant would be hired by the new company, hailed the agreement as a breakthrough in labor/management relations.

"I have no doubt that the majority of the workforce here will be those who worked here before," Lee said. "The concerns that we have voiced have been met."

Lee said the workers will receive a pay and benefits package that is comparable with prevailing contracts in the auto industry, although he declined to elaborate. Once the plant is in production, Lee said groundwork has been laid for negotiations on a formal contract. That could happen sometime next spring.

Both Usery and Lee said this summer's negotiations between the UAW and GM will not have an immediate effect on Fremont.

"We're certainly going to look at what happens this summer," Lee said, adding that the outcome "will only set a pattern for later negotiations."

• Usery said the negotiations will not affect the letter of intent signed between NUMMI and the UAW, but added that whatever happens will certainly have a bearing on negotiations next spring.

But as for NUMMI becoming a chip in the bargaining talks this summer, Usery said "we stand alone here." He does view this summer's negotiations as "most important."

Work on modifying the plant itself is continuing, and the first tooling from Japan has arrived. The $50 million stamping plant is also expected to be completed later this summer.

Convis, the plant's general manager, said the facility represents an investment of $250 million and will have three million square feet under roof on 210 acres.

In discussing what is to be gained from the joint venture, Toyoda said, "Through New United Motor, General Motors is seeking to increase its long-term productive efficiency by learning the highly efficient Japanese manufacturing and management techniques. As efficiency improvements are demonstrated, GM will seek to transfer the relevant manufacturing techniques throughout its management organization."

While a preponderance of the top management is from Toyota, the middle management—those between the senior level and hourly workers—are primarily from GM. Toyoda said there may be some middle management level people from Japan, but they would be working as coordinators for communication purposes.

As for Toyota, NUMMI's president said that parent will "gain valuable operating experience in the U.S. through its dealing with American labor and component suppliers. This experience will enhance Toyota's long-term viability as a producer in the U.S."

"It should be made clear that Toyota and GM are not establishing any other cooperative relationship," Toyoda stressed. "Toyota and General Motors will remain competitors in the U.S. and throughout the world."

• Toyoda said he anticipates many questions about what happens to the plant after the 12-year agreement expires. His response is "When two recently married people are expecting a child, they do not discuss divorce do they? So it is with our parents."

Likewise, when asked if Toyota would seek a second line at NUMMI to produce cars for Toyota Motor Sales/USA in response to Nissan's recent announcement of a Sentra line in Tennessee, Toyoda said no thought has been given to the idea, that he is concerned with getting the plant started on one line.

The Fremont plant had two production lines when operated by GM, one for passenger cars and the other for light trucks.

As for the day-to-day operations of the plant, Higashi, NUMMI's executive vice president, said it would be run just like any other Toyota assembly plant.

By using the team concept of building cars, Higashi said, NUMMI "will be building an innovative employe relations atmosphere, breaking down barriers that have traditionally separated labor and management. Mutual respect and trust will be the foundation for all relationships."

Convis said workers would be organized into teams, with each team of four to eight workers having a leader, who is also an hourly worker. Four or five team leaders would then report to a group leader.

These group and team leaders will be trained in Japan.

All hourly employes will be considered new hires for seniority purposes, although the majority will have worked previously at the Fremont plant. Those who haven't, according to NUMMI officials, will probably be hired in the stamping plant area, since that operation is new to the facility.

Chrysler hikes Japanese cars average of $63

DETROIT. — Chrysler Corp. has raised prices an average of $63, or 1.0 percent, on the Mitsubishi-built Colt and Vista models sold by Dodge and Plymouth dealers.

Colt prices went up $50 to $60 and the Vista van-type wagon rose $81. It is now $8,196.

The new Dodge / Plymouth Colt stickers are: E three-door hatchback, $5,045 (up $50); DL three-door hatchback, $5,952 (up $59); E five-door hatchback, $5,695 (up $56); DL five-door hatchback, $6,089 (up $60).

Automatic transmision for the Colt is now $322, an increase of $11.

There was no change in the price of the Dodge/Plymouth Conquest two-door liftback. It remains at $12,149.

Chrysler said the boost was the result of passing through the increases it has incurred from Mitsubishi.

The Chrysler hike was the smallest of those announced on Japanese cars since mid-April. Other increases (average or range) were: Nissan, $316; Toyota, $310; Mitsubishi, $230 to $370; Isuzu, $200 to $400; Mazda, $100-$200, and Subaru, $99.

Henry Ford talks of Japanese, his days, Iacocca

Continued from Page 2

control interest rates, the trade deficit and the Japanese trade advantages.

"(The Japanese) have an advantage in taxes and in the value of the yen versus the dollar," noted Ford, who warned of the surge of Japanese imports in the late 1960s. "The industry can do nothing about it; that's a government problem."

Otherwise, Ford sees a rosy near-term outlook for the automobile industry.

"For the short-term, things will be better even than they are today," he said. "I think the industry in the United States has made tremendous headway both in their product development and in their quality . . . I think they're better suited to compete against the Japanese."

obituaries

Dealer Pettit killed in flying accident

DEVON, Pa. — Horace Pettit Jr., 56, president of Carson-Pettit, Inc., a Mercedes-Benz and Peugeot dealership here, was killed May 11 when his glider plane crashed near the Perkiomen Valley Airport.

Pettit and James T. Carson founded the dealership in 1957.

Frederick M. Glassford

MARCO ISLAND, Fla. — Frederick M. Glassford, 70, who retired from Chrysler Corp. in 1973 as vice president - manufacturing engineering, died here May 10. Mr. Glassford started at Dodge in 1932, and went on to become vice president and group executive, Car & Truck Assembly Group, and vice president and director, quality and reliability.

Walter C. Grebe

ST. LOUIS. — Walter C. Grebe, 86, a founder of Grebe Motor Co., died April 21. He and his brothers, Ottmar, August and Edmund, started the South St. Louis Oldsmobile dealership in 1924. Mr. Grebe was president of the company and retired in 1955.

Wiese buys Mazda deal

HIGHLAND, Ind. — Norman E. Wiese has purchased Highland Imports (Mazda) here and has changed the name to Coral Motor Cars, Inc.

Volvo's first U. S. deal for 40-foot bus

Volvo of America Corp.'s Bus Division has signed a $5.9-million contract with the Rhode Island Public Transit Authority for 42 standard-size buses and, pending approval of the Urban Mass Transportation Administration, an option for seven additional vehicles. This is Volvo's first contract for its 40-foot Advance Design Bus since entering the U. S. transit bus market in 1983, the company said.

Domestic dealership total rises again; up 7 in quarter

Continued from Page 1

Buick, Oldsmobile and Pontiac and 5 for Cadillac.

The declines were minimal: 4 for Renault, 5 for Chevrolet, 6 for Volkswagen and 12 for AMC.

Chrysler Corp. had 3,894 car dealerships on April 1, compared with 3,864 on Jan. 1, It was Chrysler's sixth consecutive quarterly advance. Since the string began Oct. 1, 1982, Chrysler has had a net gain of 265 dealerships.

The gain of 30 outlets this year was a bit better than last year's jump of 27 and was Chrysler's best first-quarter performance since 1965.

Franchise totals on April 1 were Chrysler, 2,924; Plymouth, 2,870, and Dodge car, 2,779.

In addition to its 3,894 car dealerships, Chrysler Corp. has 8 that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise total.

• Ford Motor Co. ended the first quarter with 5,515 car dealerships, up 7 from 5,508 at the beginning of the year. It was the company's best first-quarter showing since 1973.

Last year, Ford Motor was down 11 for the initial three months.

Ford Motor now has been on the plus side for four straight quarters and has added 112 outlets during that span.

Franchise totals on April 1 were: Ford car, 4,685; Mercury, 2,693, and Lincoln, 1,559.

There are 107 dealerships in the Ford family that handle only Ford heavy-duty trucks. They are not included in the Ford Motor car-dealer total or in Ford Division car-franchise total.

General Motors, which has nearly half of the domestic-car dealers, held steady in the first quarter. It wound up with 10,030, down only 10 from the beginning of the year.

Last year, GM was off 50 for the first quarter. The 1984 slip was GM's lightest since the 1976-79 period. First-quarter drops were 5 apiece for 1976 and 1977 and 10 apiece for the 1978 and 1979.

GM franchise totals on April 1 were Chevrolet, 5,150; Oldsmobile, 3,185; Pontiac, 2,990; Buick, 2,955, and Cadillac, 1,600.

Chevrolet has the nation's biggest domestic-car dealer organization, and Oldsmobile is tnird after Ford Division.

On April 1, the American Motors-Renault dealer total was 1,511, down 15 from 1,526 at the beginning of the year. About 84 percent of the 1,511 handle both makes.

Last year, AMC-Renault showed a gain of one for the first quarter.

Franchise totals on April 1 were 1,428 for AMC and 1,352 for Renault.

AMC has an estimated 770 duals with Big Three makes and Renault is included in nearly 90 percent of those combinations. There are also about 75 AMC-VW locations, with about half of them including Renault.

Volkswagen had 900 dealerships on April 1, down 6 from the beginning of the year. In 1983, VW was off 14 for the first quarter.

VW has an estimated 140 duals with other makes of U.S.-built cars.

Going back a year, the latest total of 20,848 domestic-car dealerships is up 97 from the 20,751 counted on April 1, 1983.

During the period, there have been gains of 230 for Chrysler Corp. and 112 for Ford Motor and drops of 80 for GM, 79 for AMC-Renault and 20 for VW. That's plus of 163, which is reduced to 97 by a change in the number of intercorporate duals.

Week's production is 167,935

Overtime heavy, but car output dips

By Joe Wilssens
Staff Writer

U. S. auto manufacturers scheduled overtime at 18 assembly facilities last week but still saw production slip from the prior week's build.

Domestic auto makers slated production of 167,935 units last week, down 1.89 percent from the prior week's 171,170. Last week's tally however, remained 8.19 percent above the year-ago week's 155,218.

So far this year, 3,328,411 cars have been assembled in the U. S., 35.27 percent greater than 2,460,583 completed during the same 1983 period.

Breakdown for last week by company was: General Motors, 54.14 percent; Ford Motor Co., 23.14 percent; Chrysler Corp., 16.67 percent; American Motors, 2.86 percent; Honda, 1.79 percent, and Volkswagen of America, 1.40 percent.

GM dominated overtime assembly last week with 11 facilities working Saturday (May 19). The company's Detroit, Doraville (Ga.), Fairfax (Kans.), Framingham (Mass.), Janesville (Wis.), Lordstown (O.), Oklahoma City and Van Nuys (Calif.) plants worked two Saturday overtime shifts while Lakewood (Ga.), Orion (Mich.) and Wentzville (Mo.) worked one Saturday overtime shift.

Ford scheduled Saturday overtime at its Atlanta and Wixom (Mich.) plants.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two 9-hour daily shifts last week while Jefferson (Det.) worked two 8½-hour daily shifts. Newark, Jefferson and both St. Louis facilities also worked two 8-hour Saturday shifts.

Some Jaguar dealers face nonrenewal of franchise

Continued from Page 2

sought advice from their attorneys.

Some say they think Jaguar is trying to circumvent the New York Dealer Franchise Act, which goes into effect July 1 and prohibits termination of a franchise without cause.

Others say Jaguar wants them to upgrade their dealerships into "super facilities" that ultimately will bury the dealers financially.

Nevertheless, Whitehead said his company wants dealers to be located where Jaguar buyers live and thus become more profitable by increasing the number of sales per dealer.

"We want to make absolutely sure that every dealer is going to provide the best possible sales and service for this product," Whitehead said.

• Jaguar hired a marketing firm to assess how many dealers Jaguar needed and where they should be located. It was determined that in some areas, including Los Angeles, Mercedes-Benz dealers sold 400 cars while a Jaguar dealer sold 100.

"There's no way he can be competitive," said Dale.

Sales per Jaguar dealer slumped to 11 a year in 1980, but climbed to 49 in 1982 and 81 last year. Jaguar's goal is to eventually match Mercedes-Benz at 160 to 180 annual sales per dealer.

Dale added that the reorganization plan is to ready the dealer network for Jaguar's ambitious expansion plans. The firm hopes to double sales to 30,000 a year in the U. S. in the next five years. This year's sales are expected to hit 17,500, while sales four years ago totaled only 3,000. Last year's total of 15,815 was an alltime high for Jaguar in the U. S.

"A few years ago, we were selling medium-to-low-priced sports cars. Jaguar was only a small part of our business," Whitehead said. But today the company relies solely on its luxury model sales.

"Our customer has changed," he said. "He's generally very wealthy. Our dealers have to be more compatible to his lifestyle . . . He needs to be looked after."

In addition, the U. S., which is Jaguar's No. 1 market, is becoming increasingly more important. Jaguar sales in Britain have been only half of U. S. sales, and eventually 60 percent of Jaguar sales will be in the U. S.

Overtime lifts truck production to 1984 peak

Overtime at six truck facilities last week helped lift U. S. truck production to its highest weekly total for 1984.

Domestic truck manufacturers targeted completion of 66,575 units last week, 2.85 percent greater than the previous week's 64,732 and 26.22 percent above the year-ago week's 52,744.

Year-to-date, the makers have assembled 1,240,812 trucks, a substantial 45.19 percent improvement from 854,628 built during the same 1983 period.

Ford Motor Co. scheduled Saturday (May 19) overtime at its Louisville and Norfolk plants.

General Motors worked two Saturday overtime shifts at Janesville (Wis.), Lordstown (O.) and Pontiac plant No. 5. GM's Detroit facility worked one Saturday overtime shift.

Canadian output drops below year-ago week

Canadian auto production last week dipped below that of the previous week and the year-ago week.

Canadian auto manufacturers slated production of 21,648 units last week, 13.40 percent below the previous week's 1984 high of 24,997. Last week's assembly also was 11.85 percent below the 24,557 autos completed during the year-ago week.

Car production last week was low, in part, because American Motors' Brampton (Ont.) facility was down for inventory adjustment.

To date this year, the makers have assembled 446,447 autos, 10.80 percent better than 402,934 completed during the same 1983 period.

Canadian truck manufacturers targeted completion of 14,914 units last week, down 9.5 percent from the prior week's 16,398, but the total was 39.29 percent above the year-ago week's 10,707. A dip at General Motors was the major reason for the decline last week.

Year-to-date, 330,892 trucks have been completed, 60.33 percent above 206,384 finished during the comparable 1983 period.

Chrysler Corp. estimated completion of 1,905 Dodge Caravans, 1,895 Plymouth Voyagers and 760 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 84,028.

From Ford in '86

Jim Dunne

Taurus disguised as Tempo?

Ford's front-drive Taurus for 1986 is said to include a number of maintenance/upkeep savers like lifetime brake fluid, shocks able to go 100,000 miles and wheels aligned permanently for normal driving conditions. The 106-inch-wheelbase car will be marketed its first year as a four-door sedan and four-door station wagon.

U.S. auto makers differ on domestic-content bill

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Positions of the four domestic makers — differing among themselves on the UAW-backed domestic content bill — highlighted the second of the Senate hearings in Washington.

Ford was the odd-man out since its witness, Ford Vice President Kenneth Whipple, waffled. Under questioning, Ford refused to be either for or against the bill, but indicated that if the company could not get some kind of relief — better yen/dollar balance, relief from Japan's commodity tax or better U. S. tax treatment, then "disappointedly" Ford might have to go for local-content legislation.

Chrysler was specifically opposed to the UAW bill and in general opposed to such legislation, according to Washington Vice President Robert Perkins, who has had long experience in Japan and in Australia with its own content law.

But Perkins was peddling his boss' position — the Iacocca plan: Governmental action to make a "level playing field" by balancing the yen/dollar relationship and tax differentials in exchange for which Chrysler would freeze prices and limit its executive bonuses to about half those of its competitors, and in exchange for changing union work rules, Chrysler would freeze its foreign outsourcing at 7 percent.

• General Motors' Vice President Marina Whitman absolutely opposes the UAW bill and expressed distrust of the inflexibility of legislation. But she said she also thought government had a role in helping the auto industry by reducing the size of the federal budget and using monetary and fiscal policies (particularly in its effect on yen/dollar imbalance) and through domestic tax, regulatory and antitrust measures affecting the industry both domestically and globally.

Whitman — while stressing the importance of the new approach in the "no year" Saturn project and the joint venture with Toyota in California — failed to mention the rest of GM's Asian strategy, which involves importing cars from Japan. That strategy is now hindered by the Japanese "voluntary" auto restraints. In fact, although the other three companies all vigorously support continuation of restraint, GM does not, although when asked, Whitman failed to comment.

In addition, she surprised her colleagues and Michigan Senator Don Riegle by saying tax burdens of U. S. companies were about equal to those of Japanese corporations. (Last week, the independent Congressional Budget Office said the Japanese paid about 50.5 percent in taxes and the U. S. companies paid about 27.7 percent.)

Whitman explained that while the corporate taxes in Japan exceed those in the U. S., American firms pay higher taxes on employes and GM thinks the tax burden in both countries as a percentage of sales is about the same. But if American firms can reduce the number of labor hours used to make a car, then they can compete with the Japanese with their less labor-intensive production.

American Motors' Marvin Stuckey opposed the UAW bill but did not necessarily oppose the idea of local content as a way to bring Japanese makers into manufacturing in the U. S.

AMC, now a partner with the

Detroit rallies support for Grand Prix

By Joseph Bohn
Marketing Editor

"Race on Sunday, sell on Monday" is still the underlying slogan as Detroit manufacturers, dealers and suppliers rally around the third Detroit Grand Prix. It will be held June 22-24.

From a purely national media standpoint, some $900,000 is being spent on commercials by auto divisions and supplier firms on the June 24 telecast, running from 1 p.m. to 3:30 p.m. on CBS. A 30-second spot costs $36,000 this year, up from $34,000 in 1983. The rate is nonnegotiable. All the sponsors paid it, according to industry sources.

Expectations by some are that the event will draw a 4.2 TV rating — not as good as a Daytona 500, but about average for a typical weekend race.

On a cost-per-thousand basis, the Detroit Grand Prix is more expensive than, say, an ABC Wide World of Sports telecast. But for emotional and promotional reasons, Detroit advertisers are willing to pay a little more to be in on it.

Auto sponsors with 30-second spots in the national telecast include Chevrolet, Ford, Lincoln-Mercury, Chrysler and American Motors with two spots each and Dodge with four.

Auto-related advertisers include Goodyear Tire with four commercials, A. C. Delco with two, Ford Parts and Service with one, GMAC with two and STP with one.

Sponsors, of course, are highlighting their performance cars. Ford, for example, will have a Jackie Stewart NASCAR

breaking news

Pontiac slated to sell Korean Kadette in 1987

DETROIT. — General Motors probably will market the subcompact built by its Korean partner, Dae Woo, through Pontiac dealers, President F. James McDonald confirmed at the company's annual meeting. The Opel-designed Kadette will be introduced in Germany in 1985, in Korea in 1986 and in parts of the U. S. in 1987.

GM plans to spend $6 billion for capital projects this year, up from $4 billion last year. Record was $9.7 billion, in 1981. Chairman Roger B. Smith defended executive bonuses at length in his speech and urged the UAW to use restraint in its contract bargaining this fall.

Nissan Diesel dickers to build trucks in China

TOKYO.—Nissan Diesel Motor Co., the leading truck manufacturer in Japan, is negotiating with Mainland China to set up a joint venture to produce 20,000 large trucks there annually, according to a report published here. The trucks would be built in a plant of the Second Automotive Factory in central China, where medium-sized Dongfeng trucks are now produced at an annual rate of 60,000. It is anticipated that an agreement will be finalized later this year.

GM goes offshore for '85 seatbelts

DETROIT.—Fisher Body Overseas Corp. will be shipping seatbelts made in Ireland for use in several 1985-model cars. It is General Motors' first significant move to offshore sourcing of seat-belt assemblies, currently purchased mainly from independent suppliers in the U. S.

At Automotive News World Congress

Tippett, McBride to be spotlighted

Paul Tippett, chairman of American Motors, will kick off Automotive News Week by delivering keynote remarks at the ninth annual Automotive News World Congress.

Automotive News Week will be observed Aug. 26-30, with the World Congress in session Aug. 26-29 at the Westin Hotel in the Renaissance Center and the third annual Automotive News World Expo open Aug. 28-30 at nearby Cobo Hall.

Tippett, as World Congress keynoter, is expected to deliver a state of the industry report to those attending the Sunday evening opening of the 3½-day affair.

Robert McBride, president, National Steel Corp., Pittsburgh, will join Tippett on the speakers' dais on opening night of the World Congress. McBride is expected to speak on the survival of U. S. industry.

Both portions of Automotive News Week will have a strong international flavor, as has been the case in the past.

Participants in the World Congress will get a close-up

Strikers plan German march for solidarity

BONN, West Germany. — A solidarity march on the capital of the Federal Republic here is planned for today (May 28) by members of the metalworking union, IG Metal.

This follows a week in which German auto industry output has been paralyzed by strikes and subsequent lock-outs. The effects were soon being felt around Europe as stocks of components dried up.

The strike, the first of its kind in the country for six years, is over union demands for a reduction in the working week from 40 to 35 hours. This, it is claimed, could reduce the country's high unemployment, but employers maintain that it will increase costs and jeopardize job security over the longer term.

Last week's strike target spread from North Baden-Wurttemberg to the state of Hesse. Nine plants, including the Adam Opel complex at Russelsheim, were directly involved. The block on production of key components led to widespread lockouts by companies.

Volkswagen is scheduled to go down today, after the second shift and remain closed all week. Because of its relatively remote location in Wolfsburg, VW has been less committed to kan-ban and this permitted it to operate last week.

Union bitterness increased with the news that the federal labor office will not compensate workers affected by factory lockouts. These people, unpaid by employers and the union, will be in the vanguard of today's march on Bonn.

No compromise was in sight toward the end of last week. But the feeling among observers is that the strike is so damaging that it would be wiser "to work toward" a 35-hour week over a period of five years.

How U.S. customs disposes of seized gray-market cars

By Richard Johnson
Staff Writer

The U. S. Customs Service is becoming something of a distributor for expensive gray-market European cars which are denied entrance into the country because they do not comply with federal emission and safety standards.

Cars seized for technical violations are usually auctioned off by Customs or the General Services Administration (GSA). Others are pressed into some form of government service and a few are destroyed.

Most automobiles detained at the border for non-conformance are either upgraded by the importer or delivered to a country where they are suitable for use. But a significant number of cars fall into government hands when owners choose not to pay for modification of the vehicle nor arrange for re-shipment.

Customs officials say cars seized in connection with narcotics arrests and other criminal activities are frrequently old, worn-out and cheap. However, imported autos stopped for non-compliance tend to be upscale or exotic models with hefty price tags.

As a result, the government has been cast as a middleman of sorts for the likes of Mercedes-Benz, Porsche and Ferrari products which cannot be imported without substantial mechanical adjustments.

• U. S. Customs seized 9,481 vehicles valued at $63.9 million during the 1983 fiscal year. Only a small percentage of the seizures are attributed to technical violations, but agency officials report an increase in the number of non-complying cars which seek entry.

A spokesman for the EPA imports section said 16,000 cars were halted at the border for lack of agency certification in 1983. Approximately one percent of those cars were not brought up to standard and therefore never given a release to operate in the U. S.

Jerome Hollander, a public affairs officer with U. S. Customs in Los Angeles, said 400 to 500 cars which fail to comply with EPA emissions and NHTSA safety standards attempt to enter through local ports each month. He pegged the Los Angeles total at about 25 percent of the nationwide figure, and said 25-30 cars a month are seized in the area for lack of compliance.

"It is clear a large number of them are not being brought into conformity," he said.

Joan Baran, of the U. S. Customs office in New York, said 200 to 300 cars per month are detained at the ports of New York and Newark because they don't meet standards. About 50 to 60 a month are ultimately seized, she said.

An increasing number of imported cars are being illegally distributed in the U. S. via the so-called gray market, according to the Customs Service. But not all improperly equipped cars are brought in through commercial operations. Many individuals attempt to import cars for private use with little or no understanding of necessary modifications.

When a car is detained, the owner has three alternatives. He may bring the car into compliance, arrange for re-exportation or abandon it. The EPA allows 90 days to make the necessary revisions and the Department of Transportation permits 120 days. With extensions a car owner can typically get up to six months to outfit a car for the U. S.

"It is quite often a sad procedure," said Charles Conroy, a public affairs officer for the Customs Service in Houston. "Obviously, some don't understand what the rules are. They end up doing a lot of work trying to find out how much it costs to bring it up to standard.

"Sometimes, is just cannot be done; the car has to be dismantled and you start over again," he said. "The owner will say, 'I didn't know it was going to cost me $7,000' and decide to re-export.

"Then they find out the cost to re-export includes broker fees, bonding, insurance, negotiations with some kind of commercial organization and transportation itself. It is almost endless and they frequently become discouraged and simply walk away and abandon the car to the U. S. Government.

"In that case, we will sell it at a public auction."

Conroy said the car is sold exactly as is to the highest bidder. Prospective purchasers are made aware of the car's condition and advised that it is illegal to drive it in the U. S. without modification.

He said buyers can frequently find a bargain, but never a giveaway, since value specialists on the Customs staff set minimum prices. The purchaser is also required to pay the duty rate on the car.

• Moyce Woodard, manager of the GSA's personal property center in Cape Kennedy, Fla., currently has three Mercedes models for sale. Woodard, who supervises auctions for the Customs Service in Florida, said bids will be opened on June 7 for a 1972 Mercedes 220-D, a 1974 Mercedes 200-D and a 1975 Mercedes 240-D. Minimum prices set for the three automobiles are classified.

Woodard said he believed that cars auctioned off by the government must be re-exported by the new owner. However, Ed Kittredge, of the Washington public affairs office of U. S. Customs, said buyers may operate cars purchased at auction in the U. S. if they are brought into EPA and NHTSA compliance.

Hollander said a car seized for failure to conform is apt to be a "high-end Porsche or Mercedes, or an exotic like Ferrari."

Conroy said luxury Mercedes models frequently turn up on the auction block in Houston. But he also said that several less expensive, older imports have been sold in recent years.

"There may be some low-end cars," said Hollander. "But those are the kind of cars you read about being destroyed."

Customs officials around the country say destruction of abandoned cars is rare. It usually happens to lower-priced imports which attract little interest among buyers because the cost of conversion outweighs the value of the automobile.

The case of an Oregon woman who purchased a car in Australia several years ago attracted widespread media attention, according to Kittredge.

"The woman didn't have enough money to meet standards or re-export it," he said. "There was a big hullabaloo and a judge ordered it destroyed. But I've never heard of another case of a car being destroyed."

Some cars are transferred to other government agencies for use. However, Della Atias, GSA's director of seized property, said vehicles driven by gov-

Tooling snag delays Ford on Aerostar plant

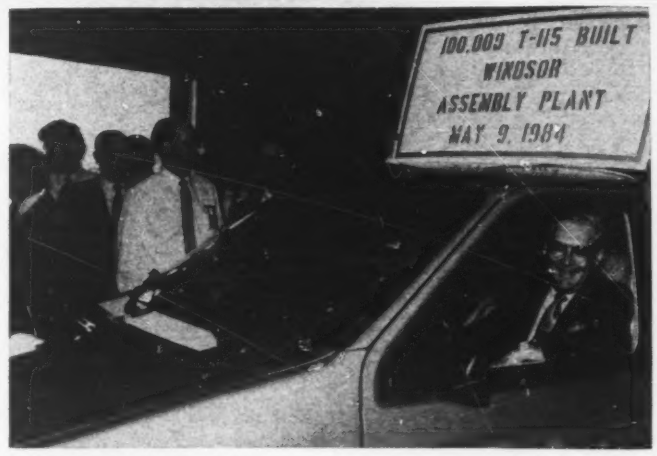
ST. LOUIS. — Ford Motor Co. is experiencing delays in obtaining the proper tools and equipment for its $200-million expansion that will launch the Aerostar minivan at the suburban Hazelwood plant here, according to a company spokesman.

The plant is adding 400,000 square feet of space to turn out the minivans, which will be introduced next year.

Sometime late this year or early next year, the plant will phase out Ford Crown Victoria and Mercury Grand Marquis and become the sole producer of the minivan. Production of the passenger car will be moved to Canada.

Coach Builders converts the Seville

Coach Builders, Ltd., High Springs, Fla., has made first deliveries of its new four-door Cadillac Seville convertible conversions. The car features completely padded and insulated roof, color-coordinated headliner, power-operated top system, fully reinforced body structure and retention of full seating and trunk capacity, Coach Builders said.



Minivan milestone

Chrysler Corp.'s Windsor (Ont.) Assembly Plant built its 100,000th T-115 minivan. Chrysler Canada President M. J. (Moe) Closs drives the milestone Plymouth Voyager off the line.

Mid-month car sales period's best since '78

By Jenny L. King
Staff Writer

Domestic new-car sales continued their long growth spurt during mid-May, reaching the highest total for the period since the boom year of 1978.

With one less selling day this year, the 22.15-percent daily rate gain was more impressive than the year-to-year comparison's 8.57-percent increase.

Sales have exceeded the 1983 total in every 10-day period this year.

Combined sales for the U. S. auto makers May 11-20 were 226,797, up 8.57 percent from 208,888 last year. The daily rate for the period was 28,350, up 22.15 percent from 23,210.

Year-to-date sales were 31.74 percent ahead of 1983, with 3,180,464 retail deliveries this year against 2,414,245.

For the period, General Motors led the industry, its sales up 13.39 percent (27.57 percent daily rate) to 139,925 from 123,397.

Ford Motor Co. was up 6.67 percent (20.00 percent daily rate) to 50,489 from 47,331. Chrysler Corp. reported sales of 27,445 units, down 2.10 percent (up 10.14 percent daily rate) from 28,034 a year earlier.

American Motors dropped to an estimated 4,450 sales from 5,900, a decline of 24.58 percent (down 15.24 percent daily rate). Volkswagen dropped 31.04 percent (down 22.47 percent daily rate) to 1,946 from 2,822, and Honda doubled its sales to 2,542 from 1,404.

• Along with the greatest sales improvement came a larger piece of the mid-month market for GM, which held 61.70 percent this year compared with 59.07 percent in 1983. Ford dipped to 22.26 percent from 22.66 percent. Chrysler was pushed back to 12.10 percent from 13.42 percent. Honda climbed to 1.12 percent from 0.67 percent, AMC dropped to 1.96 percent from 2.83 percent and VW had 0.86 percent compared with 1.35 percent.

Of GM's five makes, Pontiac made the most progress May 11-20 with a 42.08-percent sales increase. Buick was up 18.14 percent, Chevrolet was up 15.05 percent, Oldsmobile was up 1.04 percent and Cadillac dropped 10.08 percent.

At Ford Motor Co., Ford was down 2.43 percent, Mercury was up 20.60 percent and Lincoln was up 54.14 percent.

Chrysler was up 5.09 percent, Dodge was up 4.29 percent and Plymouth dropped 14.77 percent. AMC plunged an estimated 73.68 percent and Renault slipped 1.25 percent.

Chevrolet Cavalier was the best-selling nameplate in the period, with 11,009 sales to its credit. Second was Oldsmobile Cutlass Supreme at 10,442, followed by Chevrolet Celebrity at 10,152, Ford Escort at 8,898 and Cutlass Cierra at 8,666.

At the May 11-20 pace, annualized sales were running 7.8 million domestic cars.

Ford Credit to offer $750 million in notes

DEARBORN. — Ford Motor Credit Co. has filed a shelf registration with the Securities and Exchange Commission for a proposed public offering of up to $750 million in notes.

Proceeds from the sale will be added to Ford Credit's general funds for purchasing receivables, for loans and for debt retirement. Proceeds may also be used to reduce short-term borrowings or invested temporarily in short-term securities.

For '85 light trucks

Lower fuel standard proposed by NHTSA

WASHINGTON.—In response to Ford Motor Co.'s pleas for help, NHTSA is proposing to lower the 1985 light-truck fuel-economy standard, but it has at least tentatively denied Ford relief from the 1984 standard.

Ford's request for 1984 was not "timely filed," NHTSA said. Comments are due in 30 days.

Truck makers can meet either a combined 4x4 and 4x2 standard or separate standards. Last November, Ford asked NHTSA to lower the combined 1984 and 1985 standards and the 4x2 standards. No change was asked for the 4x4 standards. But in January, Ford asked for further changes in the 1985 standard: To 19.5 MPG for the combined standard, 19.7 MPG for the 4x2 standard and 18.9 MPG for 4x4s. These are what Ford estimates its capability to be, and what NHTSA is proposing to accept.

Ford said it might miss the '84 combined standard by 1.1 MPG or the 4x2 standard by 1.2 MPG. Each vehicle sold that misses the standard by one-tenth of an MPG is subject to a fine of $5, unless the company has carryforward credits from the last three years.

Ford said it had enough for '84 models but not for '85 models. Moreover, its contingency plans for '85 light trucks is "very expensive and may produce long-term harm to the Ford light-truck business," the company said.

• In proposing the change, NHTSA said its original estimates of higher gasoline prices were wrong. While small trucks sold well, they were mostly imports, which didn't help domestic makers' truck CAFE, NHTSA said.

NHTSA said that even with the benefits of electronic fuel injection demand for bigger engines and probably bigger trucks in 1985 will cause problems.

When NHTSA set its initial standards, it did so at the level of the "least capable manufacturer"—Ford, which was then having economic difficulties. NHTSA said there now is evidence other makers are having trouble, also: General Motors has said it is experiencing losses in fuel economy. Chrysler Corp. is indicating it may miss the 1984 standard by as much as 1.5 MPG—even more than Ford.

To meet the '84 standard, Ford could restrict sales of its V-8 engine—perhaps losing sales to other makers. Ford said this might lower its sales by 100,000 to 180,000 units and mean job losses of 12,000 to 23,000 at Ford, its dealers and suppliers.

If customers just buy from another company, this would not provide any national fuel savings, Ford argued.

Granting Ford's request for 1985 would cost 1.1 billion gallons of gasoline over the life of the '85 light-truck fleet, NHTSA said.

If approved, truck fuel standards would take the unique turn from more stringent from '82 models through '84 models to less stringent with '85 models.

Moonroof for C-cars

Sky-Top Sunroofs, Ltd., St. Louis, is marketing a power moonroof to fit the General Motors '85 front-wheel-drive C-cars. It includes a stainless steel glass frame and matching trim ring and is electrically operated.

Tapes paint picture of staving off the British

DeLorean trial dwells on struggle

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Video and audio tapes played in the DeLorean drug trafficking case here last week painted a picture of the former auto maker struggling to stave off the British while waiting for an infusion of drug-related cash to save his ailing car company.

James Timothy Hoffman, a government informer and the prosecution's chief witness in the case, was questioned by Assistant U. S. Attorney James Walsh on his role in the sting operation that netted DeLorean and two others on drug charges in October, 1982.

Defense attorneys for DeLorean charged presidential counselor Edwin Meese with orchestrating DeLorean's arrest to take place in Los Angeles, where it would get more publicity. The DeLorean arrest was to play a prominent part in the Reagan Administration's highly publicized war on drugs, they said.

In Washington, Meese said he had nothing to do with the DeLorean case and had no knowledge of it except for what he read in the newspapers.

Late last week, the defense began cross-examination of Hoffman.

Putting forward its strongest evidence that DeLorean was a willing participant in the deal, the government showed a videotape of a meeting between Hoffman and DeLorean at the L'Enfant Hotel in Washington, D. C., Sept. 4, 1982.

In the tape, Hoffman tells DeLorean he can pull out of the drug deal.

"I mean, if you don't want to do it, if you want to stop, you're not compelled to," Hoffman said. DeLorean responded, "I want to proceed."

A second videotape shown last week captured a meeting between DeLorean, Hoffman and an undercover agent, John Valestra, who posed as an underworld drug figure using the name John Vicenza.

It was during that Sept. 28, 1982, meeting that the trio discussed DeLorean selling a half-interest in his car company for $30 to $40 million in drug money in order to keep the venture going.

The stock involved in the transaction was to be kept in a trust account in Vicenza's name at Eureka Federal Savings & Loan in San Carlos, Calif.

• DeLorean had already been dealing with another undercover agent, Benedict Tisa, who was posing as a crooked banker named James Benedict at the institution.

Prior to the Sept. 28 meeting, DeLorean had sent Tisa documents offering portions of the former auto maker's U. S. holdings as collateral to cover DeLorean's investment in cocaine to be purchased by William M. Hetrick. Hetrick, who was arrested the day before DeLorean, has reached a plea agreement with the government on the conspiracy charges and awaits sentencing.

It was during the Sept. 28 meeting with Hoffman and Valestra that DeLorean detailed some of the problems he was having with the British and why he needed a quick infusion of cash to keep the car company afloat.

According to DeLorean, the change in power from Labor to Conservative parties in England was responsible for the cutoff in funds from the British government.

"They said, 'Well there is going to be no more government support for industry,'" DeLorean said, "You know, 'from now on either you make it or don't make it on your own.' Well, it caught us in an awkward spot because the government still owed us the working capital portion of our contract.

"They'd already funded $228 million to build a plant, to do all the tooling, to train the

GM signs pacts for steel; 4-pct. price hike denied

DETROIT. — General Motors denied that its steel prices for the 1985 model year will rise 4 percent — a figure that appeared in a newspaper report — but refused to say what the real increase will be, or whether there will in fact be an increase.

GM did not ask its steel suppliers for a percentage decrease in their prices in the way that Buick and Chevrolet asked their parts suppliers for cuts of 3.3 percent, a GM spokesperson said.

GM did retain its nine U. S. and three Canadian steel suppliers, she said.

Their shares of GM's business changed chiefly as a result of GM's efforts to single-source steel for each component and to reduce the number of steel suppliers at each plant, she said. Goal of the program is to achieve uniformity.

Steel makers refused to comment on their prices to GM. One source said he understood his company's contract required that price information remain confidential.

For the 1984 model year, GM will use about 6 million tons of steel, about 7 percent of U. S. output.

AMC offers 10.9-percent finance deal

American Motors has adopted an interest subvention program to promote sales of its small domestic cars and imported cars.

From May 24 to July 31, AMC is offering 10.9 percent financing for buyers of new '83/'84 Renault Alliance, Encore, Fuego and Sportwagon models.

Renault dealers are offering the rate on loans up to 48 months through American Motors Credit Corp. or participating lending institutions.

Car loans, having risen within the past 30 days, now range from 13.5 percent to more than 15 percent annual percentage rate in some areas.

AMC estimates savings to customers of $514 for a $7,000 finance contract to $734 for a $10,000 contract, based on 48-month financing.

AMC is absorbing the costs of the program without any dealer contribution.

Peter Guptill, general manager - U. S. sales, had earlier told Automotive News that AMC was building vehicles for a "very aggressive" summer rate of sales.

The subcompact market in which AMC competes with Alliance and Encore has been soft this year, pushing its days' supply of Alliance to 87 and Encore to 88 on May 1.

AMC's program is also aimed at countering incentives by other auto makers, such as Ford, which is offering dealers up to $400 on Tempo/Topaz sales, and Chrysler, which has been offering free automatic transmissions, valued at about $470.

Crain to start up business papers in Detroit, NYC

Crain Communications, Inc., will launch Crain's Detroit Business and Crain's New York Business within the next 12 months.

Crain now publishes Automotive News, Crain's Chicago Business and Crain's Cleveland Business among 22 business and trade publications.

The company plans to introduce its weekly New York business newspaper by Jan. 1 and the Detroit weekly publication early in 1985.

Keith E. Crain, company vice chairman who will serve as publisher, said, "There's more to Detroit than just cars. There's an awful lot of nonautomotive business news in the city and we plan to do an aggressive job of reporting the complete business picture in Detroit."

While serving as dealership consultant

$49-over apostle spreads word on computers

PALMYRA, Pa. — "The more you give, the more you get," said the tall man in the gray suit with velvet collar who was standing outside the dealership door slowly peeling off $100 bills and tossing them to the ground.

The man was Howard Van Bortel, apostle of the $49-over method of selling new cars and successful, if somewhat unorthodox, dealership consultant.

Van Bortel was not giving away the $100 bills and carefully picked them back up and put them in his pocket. He was making a point to a dealer.

"If you stood at your door and threw away $100 bills at this rate all day long, you couldn't throw away as much money as most dealers do every day by not getting customers who want to buy a car into their showroom and by not selling them a car when they do come in."

Van Bortel, who is headquartered in Palmyra, N. Y., was in Palmyra, Pa., at Klick-Lewis Buick-Chevrolet-Pontiac, where he and dealer Warren Lewis were putting the finishing touches on Van Bortel's latest wrinkle to the $49-over program — computerized selling.

The $49-over method of selling cars was devised by Van Bortel when he was a Chevrolet dealer and, he says, biggest Corvette dealer in the country.

Under this system, the cus-

New low COE by Ford due here in 1985

By Arthur M. Flax
Assistant Truck Editor

Ford Motor Co. will introduce a new medium, low-cabover truck, combining North American and European design, to the North American market in the Fall of 1985, according to Edward T. Mabley, Ford Truck Operations heavy-truck product development manager.

He said the new truck, which will be available in Brazil in some 10 months, will "initially augment" Ford's aging C-Series low cabover.

Mabley said the truck will be assembled in Brazil, using the European Cargo cab on a North American chassis similar to Ford's F-Series. He called the Brazilian manufacturing facility "world class."

Ford 6.6 and 7.8-liter diesel engines, also of new design, will power the vehicles. The new direct fuel-injection, six-cylinder power plants, which have no application limitations, will be "common" to Ford's F, B and L-series vehicles after 1987, Mabley said. All U.S. versions will be turbocharged, he added.

"With the dieselization of medium trucks, we felt it was very important to have our own engine," he said.

The first model of the new truck will be powered by the 6.6-liter, 165-HP diesel and later models will include a 7.8-liter turbocharged and aftercooled version of about 235 HP.

The new truck also will feature a European-styled suspension for improved ride and handling, Mabley said, and a hydraulic disc-drum brake system with an in-wheel parking brake.

"With the new truck, Ford

Olympics Torch Run gets GMC's support

A fleet of 26 GMC vehicles, three of which are shown here, provide logistical support for the 82-day, 8,700-mile Olympics Torch Run relay from New York to the Summer Olympics in Los Angeles. The vehicles include motor homes on GMC chassis, tractors, straight trucks, compact pickups, vans and Suburbans.

Third of independents may buy trucks soon

CHICAGO. — More than a third of the nation's estimated 150,000 independent long-haul truck drivers soon may buy trucks, according to OTR Feedback, a new monthly study panel sponsored by Associates Commercial Corp.

Thirty-five percent of the panelists in the first of the monthly surveys said they were considering the purchase of a different truck within the next 12 months and 10 percent said they were undecided.

Of the operators considering the purchase of a truck, 53 percent said they would buy a new truck, 38 percent said they would buy a used vehicle, and the remainder said they were undecided.

A high percentage of those who said they planned to buy a truck also were among those the survey showed to be most interested in better business methods.

Bill E. Starr, executive vice president in charge of Associ-

Streamlined transporter seen ideal for commercial use

Penske has off-track winner, too

PARSIPPANY, N.Y.—Among the ranks of Indianapolis car-racing teams, the Penske Racing Team stands out. It is, many contend, the best prepared team on the circuit, and its cars are always immaculate.

The Penske team now will be noticed at races before its cars ever set a wheel on the track. Its new transporter is an exercise in aerodynamics that also stands out from its competitors in efficiency and appearance.

Among racing teams, there is a lot of competition as to which will show up with the best looking rig.

Last year, Roger Penske, race-team owner and Hertz-Penske Truck Leasing, Inc. president, decided that a rig that not only looked good, but also performed well would be an excellent tie-in with his transportation business.

"Basically we've built a prototype transporter," Penske said. "Because of the new (length) laws, we were able to take advantage of aerodynamic designs we had experience with — for instance smoothing the airflow around the wheels — and also to build a vehicle from a pure styling standpoint. It looks good in the pictures, but it really is something to see in person."

• Larry Shinoda, president, Shinoda Design Associates, was hired to design and coordinate the project, and the truck was completed in a four-month period, starting last December.

Based on a 1984 Freightliner cabover and 48-foot Great Dane trailer, the rig features a custom-designed, roof-mounted air deflector, cab extenders, articulated tractor-trailer gap seal-

'Exercise in aerodynamics'

Roger Penske, race-team owner and president of Hertz-Penske Truck Leasing, Inc., calls his new tractor/trailer rig an "exercise in aerodynamics" which could have commercial applications. The prototype is used to haul race cars and racing equipment.

truck industry news

Truck registrations hit record 913,468 in '84 first quarter

Registrations of new trucks of all types in the U. S. hit an all-time high in the first quarter of 1984, topping the previous mark established in 1979 and showing healthy gains in all three market segments.

The three-month total of 913,468 units was 4.5 percent higher

Table on Page 58.

than the 874,407 vehicles registered in the like period five years ago, according to R. L. Polk & Co. statistics, and 54.2 percent greater than last year's 592,311.

In March, there were 328,710 tallies, an increase of 44.9 percent over the year ago 226,904 units.

New York and Oklahoma figures for 1984 were compiled from manufacturers' sales records. No registrations were available for the District of Columbia in March, 1984, or for Oklahoma in 1983.

Light-truck tallies in the first quarter totaled 363,395 and accounted for 94.5 percent of the industry total. The figure was 55.1 percent higher than the 556,679 units tallied in the first quarter of 1983 and 9.5 percent greater than the 788,386 units registered during the 1979 period.

The medium-truck count in the first quarter of 1984 was 10,665, a gain of 17.1 percent over the year-ago 9,111. The 1984 total was off 71.7 percent from the 37,685 units tallied in the first quarter of 1979.

Heavy-truck tallies of 39,408 units for the three months represented a 48.6 percent increase over the year-ago 26,521, and were 18.5 percent lower than the 48,336 tallied in 1979.

There were 487,501 Group 1 tallies in the first quarter of 1984, an increase of 57.6 percent over the year-earlier 309,388. The Group 2 count was up 48.9 percent to 366,702 units, com-

February total is 782,327

Car registrations highest since 1973

By Jenny L. King
Staff Writer

Total new-car registrations for February, 1984, were at their highest level in 11 years and topped January's sum by 35,000 units. Domestic new-car figures were up a staggering 47.72 percent February to February and imports grew by 13.90 percent.

Figures provided by R. L. Polk & Co. disclosed new-car registrations of 782,327 in February, up 37.57 percent from 568,633 a year earlier and best for the month since 1973 when 842,857 were counted. It was an increase of 4.70 percent over the January total of 747,231.

Domestic registrations numbered 587,946, up 47.72 percent from 398,007 the preceding year. January's domestic total was 552,284.

Import-car registrations added to 194,381 for February, up 13.90 percent from 170,656 a year earlier.

Imports plunged 5.16 percentage points in share of the total market, skidding to 24.85 percent from a lofty perch of 30.01 percent a year earlier. General Motors and Ford Motor Co. split the difference, with GM retrieving 3.32 percentage points and Ford up 2.31 percentage points.

Chrysler's gain in February was more modest: Up 0.27 percentage points, to 9.33 percent from 9.06 percent. GM was up to 45.01 percent from 41.69 percent and Ford had 18.96 percent compared with 16.65 percent in February of 1983.

American Motors discovered that holding its own (14,427 vs. 14,683 registrations) wasn't enough in an active marketplace. AMC lost 0.73 percentage points, dropping to 1.85 percent from 2.58 percent. Miscellaneous domestics had virtually no piece of the action, down from a scant 0.01 percent of the market in 1983.

Total industry registrations for the first two months were

House passes bill to loosen constraints on joint R&D

WASHINGTON. — Legislation designed to loosen antitrust constraints on joint research and development cleared the House of Representatives by a 417-0 vote. A Senate version is awaiting floor approval.

The Joint Research and Development Act of 1984 would reduce the antitrust liability of certain joint ventures by eliminating the current triple damages penalty in favor of an award limited to the amount of the actual damage, plus interest accumulated during court proceedings.

To qualify for the reduced liability, venture participants would have to give the Justice Department an advance outline of the proposed research and development activity. The Justice Department would then have a chance to block the plan.

White House and congressional sponsors believe the reduction in legal risks will stimulate cooperative research among companies in the U. S.

The legislation would call on the courts to weigh a joint venture's anti-competitive effects against the participants' claims of enhanced competition flowing from the venture.

The Senate version does not contain a House provision that allows the courts to compensate joint-venture participants for legal fees when antitrust charges are fought successfully. Currently, legal expenses are rebated only to plaintiffs when they win antitrust actions.

Mack petitions NHTSA for recall exemption

WASHINGTON. — Mack Trucks, Inc., has petitioned NHTSA for an exemption from safety recalls for radio speaker covers on 5,015 of its trucks, on the grounds that their noncompliance with safety regulations is inconsequential.

Occupant trim panels must not burn faster than 4-inches per minute, according to NHTSA safety regulations. The radio grilles on the Mack trucks, all built between August, 1977, and June, 1983, burn at a rate of 5.3- to 5.8-inches per minute, Mack told NHTSA.

The speaker housings and grille retainer rings "easily meet" the federal flammability standard, the company said. Furthermore, the speakers are in the cab's upper part, where fires are relatively unlikely to start.

NHTSA requests comments on the matter until May 30.

Design excellence from Brougham Industries, Inc. Only one company — Brougham — builds motor homes with so much design innovation and quality. Brougham's experience pays off in maximum value and minimum maintenance with features that include all fiberglass exteriors and welded aluminum framing. up 31.41 percent in a year-to-year comparison and increased 44.99 percent from the 1982 level. Registrations for January-February, 1984, numbered 1,529,558; a year earlier they were 1,163,957, and two years ago they were 1,054,935.

Domestic new cars totaled 1,140,230 for the first two months, up 40.45 percent from 811,820 in 1983 and up 55.72 percent from 732,237 in 1982. Imports gained 10.56 percent, climbing to 389,328 this year from 352,137 in 1983.

Year-to-date gains included 2.52 percentage points for GM, 2.27 percentage points for Ford, and 0.58 percentage points for Chrysler. AMC dropped 0.55 percentage points, miscellaneous domestics were down 0.02 percentage points and imports plummeted 4.80 percentage points.

For February, 1984, the market-class breakout included: Intermediates at 26.49 percent, imports at 24.85 percent, compacts at 18.33 percent, subcompacts at 12.40 percent, standards at 10.12 percent and luxury cars at 7.81 percent.

A year earlier, intermediates had 24.44 percent of the total market, imports had 30.01 percent, compacts had 15.36 percent, standards had 13.27 percent, subcompacts had 11.58 percent and luxury cars had 5.34 percent.

Excluding imports, the February, 1984, market class spectrum included: Intermediates at 35.24 percent, compacts at 24.40 percent, subcompacts at 16.50 percent, standards at 13.46 percent and luxury cars at 10.40 percent.

Twelve months earlier, intermediates accounted for 34.92 percent of the domestic market, compacts had 21.94 percent, standards had 18.97 percent, subcompacts had 16.55 percent and luxury cars had 7.62 percent.

Polk figures for 1984 include registrations from 48 states and manufacturers' sales information from New York and Oklahoma. Numbers for 1983 are all state registrations; Oklahoma is not included.

Cars of stars to be auctioned in Chicago June 10

HIGHLAND PARK, Ill.—J. J. Born, president and owner of the Chicago Historical Antique Automobile Museum, will place his collection of celebrity and antique automobiles on the auction block here June 10.

Billed as the Hollywood-TV Cars of the Stars Museum Auction, it will function without a minimum bid requirement, "meaning every car bid on will be sold," Born said.

Among vehicles to be auctioned are the Batmobile and the Batcycle from the Batman TV series; Evel Knievel's jump car and stunt motorcycle; Elvis Presley's pearlescent white 1969 Lincoln Continental, and three vehicles which carry serial number one—a 1954 Mercedes Gull Wing, a 1974 Bricklin and a DeLorean.

Other cars to be auctioned during the one-day event are the 1926 bootleg brewery truck with which Al Capone and his brothers began their rise to gangland prominence; President Lyndon Johnson's personal limousine, and the Bonnie and Clyde movie death car.

Chrysler recalls 235,000 autos for smog fix

WASHINGTON. — Chrysler is recalling some 235,000 1980 cars with 225-CID engines to assure compliance with federal hydrocarbon and carbon monoxide standards, according to EPA.

These 49-state cars include Plymouth Volare and Gran Fury; Dodge Aspen, Diplomat, Mirada and St. Regis, and Chrysler LeBaron, Cordoba and Newport.

EPA found these cars were emitting an average of 0.57 grams per mile of HC and 7.8 g/m of CO, compared with the 1980 standard of 0.41 for HC and 7.0 for CO. Neither EPA nor Chrysler could pinpoint a defect.

Limited Edition 4000S

Audi's Limited Edition 4000S offers nearly $2,000 worth of extra performance, appearance and convenience items in its suggested retail price of $14,240, Audi said. The car also features spoke-type alloy wheels, rear spoiler and matte black trim.

AN 35

Welcome to a Billion $ Market

Already in 1982, 1.6 m cars and almost 1.5 m commercial vehicles of all types were registered in the countries bordering the Arabian Gulf (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, United Arab Emirates).

Internationally seen, the Gulf region represents the fastest growing market for the Automotive Industry with an increase in vehicle registrations equivalent to four times the world average.

The strong industrial growth and corresponding improvement of the entire infrastructure have led to a dynamic development of a market which includes not only vehicles but also accessories, maintenance equipment, and service facilities. In fact, many of its sectors are still in their initial stages.

We invite all vehicle manufacturers and suppliers of related products and services to participate at the

ARAB GULF AUTOMOTIVE SHOW

the first International Automotive Exhibition in the United Arab Emirates

November 12–16, 1984 in Abu Dhabi

Take advantage of this opportunity to present your line of products to an interested and qualified public.

GULF EXPO 2000

To reduce vehicle emissions

Recalls, shorter warranty urged

WASHINGTON. — A strongly administered two-year warranty combined with a vigorous recall campaign will "ensnare" heavy-polluting vehicles and allow their repair by their manufacturers, a Congressional panel was told by a spokesperson for the Automotive Parts and Accessories Assn.

According to Linda J. Hoffman, APAA vice president for governmental affairs and trade, the recall procedure would be more effective than an extended warranty, which automakers are using as a marketing tool to discourage car owners from making their own repairs or using independent service facilities.

Testifying before the House subcommittee on Health and the Environment, which is considering amendments to the Clean Air Act, Hoffman said the federal vehicle safety agency has demonstrated that recalls effectively exert "powerful compliance leverage without any need to resort to warranty measures."

Recalls are better for consumers, Hoffman said. With recalls, she said, consumers are notified when a specific repair has to be performed; warranties require no such notification.

"The cost of recalls and the accompanying adverse publicity (would) combine to create the strongest possible encouragement for manufacturers to provide the consuming public with vehicle emission control systems that are reliable and durable," she said.

Warranties, on the other hand, "tilt consumer dollars toward the higher-priced, less-convenient dealer," Hoffman said.

Truck record set for registrations in first quarter

Continued from Page 16

pared with 246,213 last year. There were 9,192 Group 3 units, versus only 1,078 a year ago.

Large gains also were posted in the medium-duty groups. In Group 4, there were 151 units, compared with 72 in 1983. Group 5 had 534 tallies, versus 153 a year earlier. The Group 6 total of 9,980 units was a 12.3 percent increase over the 8,886 units in 1983.

Group 7 registrations rose 19.8 percent, from 11,025 during the first quarter of 1983 to 13,210 units this year. The Group 8 count of 26,198 represented a 69.1 percent boost over the 15,496 units registered a year earlier.

Ford led the industry with 265,202 registrations in the first quarter, accounting for 29.03 percent of the total. Its share was down 2.89 percentage points from its year-earlier figure of 31.92 percent on 189,053 registrations.

Second-place Chevrolet took 27.89 percent with 254,765 tallies. Its share was down 2.17 points from 30.06 percent on 178,041 units last year.

Tippett succeeds Caldwell as chairman of MVMA

DETROIT.—W. Paul Tippett, chairman and chief executive of American Motors, has been elected chairman of MVMA.

He succeeds Philip Caldwell, chairman and chief executive of Ford Motor Co., for the one-year term.

Named vice chairmen were Roger B. Smith, of General Motors, and Donald D. Lennox, of International Harvester. They are chairmen and chief executives of their companies.

Caldwell was elected secretary of MVMA. Lee A. Iacocca, chairman and chief executive of Chrysler Corp., was elected treasurer.

V. J. Adduci, MVMA president and chief executive, and Thomas H. Hanna, senior vice president, were reelected.

Elected to three-year MVMA board terms were: Bjorn Ahlstrom, president of Volvo North America Corp.; Iain M. Anderson, executive vice president, Volkswagen of America; Gerald Greenwald, vice chairman, Chrysler Corp.; F. James McDonald, president, General Motors; Marvin W. Stucky, vice president, American Motors, and Lennox.

Other directors are: J. Patrick Kaine, vice chairman, International Harvester; Howard H. Kehrl, vice chairman, General Motors; Charles M. Pigott, president, PACCAR, Inc., and James L. Tolley, vice president, Chrysler Corp.

Also: Betsy Ancker-Johnson, vice president, General Motors; Donald E. Petersen, president, Ford Motor Co.; Noel Phillips, president, Volkswagen of America; Will Scott, vice president, Ford Motor Co.; Adduci, Caldwell, Tippett, Iacocca and Smith.

The board also named the following to the MVMA Executive Committee: Adduci, chairman; Anderson, Ancker-Johnson, Kaine, Scott, Stucky and Tolley.

MVMA member companies are American Motors, Chrysler Corp., Ford Motor Co., General Motors, International Harvester, M.A.N. Truck & Bus Corp., PACCAR, Volkswagen of America and Volvo North America Corp.

Surge in sales of trucks trims Harvester loss

Continued from Page 16

trimmed the net loss to $817,000, compared with $159.1 million a year earlier after a loss from discontinued operations.

Second-quarter sales amounted to $1.25 billion, Harvester reported, a gain of 26 percent over last year's $995 million. Three-month truck shipments were up 46 percent to $854 million, the firm said, but farm-equipment deliveries were off 3 percent to $400 million.

Harvester's first-half net loss amounted to $55.7 million, down dramatically from the year-ago $270.4 million. Six-month sales were up 30 percent, from $1.72 billion last year to $2.24.

Quarter's HD registrations up 48.6 percent over 1983

Continued from Page 16

to 13,210, a gain of 19.8 percent over the year-earlier 11,025.

The March total of 15,017 was up 49 percent from the 10,081 units tallied a year earlier.

International continued in the No. 1 spot with 8,636 units through March, compared with Ford's 7,383 units.

Ford and International also were the biggest losers in market share. Ford's 7,383 tallies represented 18.74 percent of the total, down 3.89 percentage points from the year-earlier 22.63 percent on 6,003 units.

• International's 8,636 tallies, representing 21.91 percent of the market, was off 2.91 points from last year's 24.82 percent on 6,582 units.

Kenworth and White both scored large gains in penetration. Kenworth's 8.81 percent share on 3,472 units represented a gain of 3.73 points over the 5.08 percent share on 1,348 units during the same period last year.

White's 5.39 percent share on 2,126 units represented a boost of 3.55 points over the 1.84 percent share on 488 units a year earlier.

Peterbilt, Freightliner and GMC also increased their market share in the first quarter. Chevrolet, Mack, Mercedes-Benz, Volvo, Autocar, Western Star, and the miscellaneous group suffered losses.

Concedes to many auto-maker requests

NHTSA eases standard on 'high' brake light

WASHINGTON. — The safety standard mandating a single, center high-mounted stop lamp beginning with '86-model cars generated so much auto-maker objection that NHTSA has conceded to almost all the requests for changes.

The standard will now allow mounting above the rear window and, for convertibles only, not more than six inches below it. The standard also states clearly that the lamp can be mounted directly on the glazing.

In addition, because of the physical impossibility of eliminating all reflections from interior-mounted lamps shining on the rear window, NHTSA has dropped its requirement of no reflection and said merely that means should be taken to minimize reflections.

Although the maximum permissible intensity of 160 candela has been retained, the minimum intensity has been lowered from 40 candela to 25 candela. The minimum area of 4.5 square inches has been kept.

Lamps that are mounted in the interior of a vehicle need not meet moisture, dust or corrosion requirements.

Various interpretations are also offered, the principal one being that photometrics of an interior-mounted lamp be measured through the glazing as the lamp is installed in the vehicle with the rear window behind it.

Effective date is Sept. 1, 1985.

It is Sept. 1, 1986, for the termination of the provision permitting center high-mounted stoplamps to flash with hazard warning systems.

In a separate notice, NHTSA asked for comments on one issue still unresolved—a request by General Motors that the lamp may be installed before the effective date.

Adopting this optional date would preempt one year earlier any state laws that might ban the lamp's early introduction.

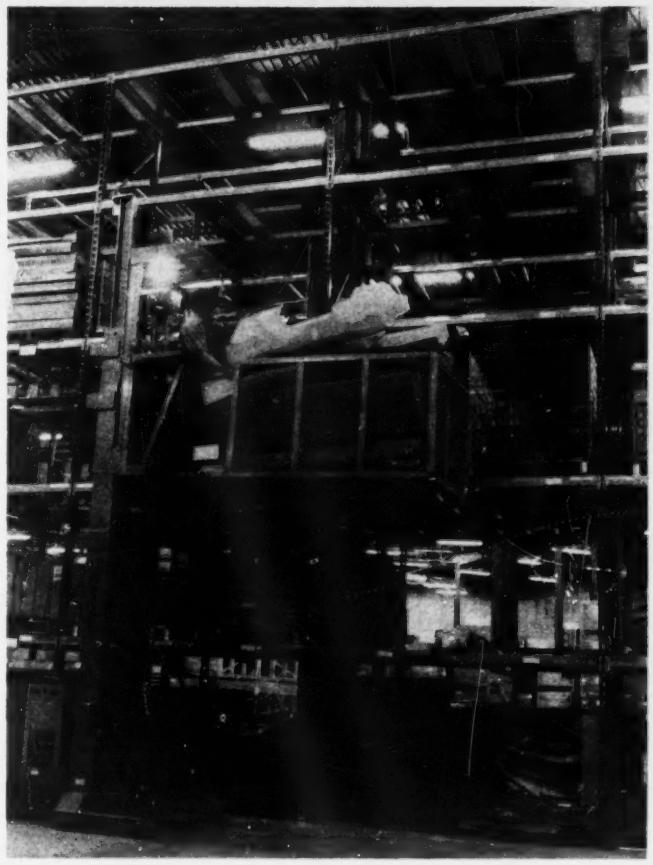
★—New York and Oklahoma figures compiled from manufacturers' sales records, 1984; no registrations for Oklahoma, 1983; District of Columbia, March, 1984.
#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are Chevy-Van, El Camino and Blazer; Dodge, compact trucks; Ford, Econoline and Bronco; GMC, Vandura and Jimmy. *—Miscellaneous includes imports, Divco, Hendrickson, Oshkosh, etc.
—Compiled from R. L. Polk & Co. data



Utilizing space

In its new $7.2-million parts warehouse, Mazda Motors of America (East) utilizes space above and between racks. The storage facility and training center is in Edison, N. J.

$7.2-million parts warehouse opened in Jersey by Mazda

EDISON, N. J. — Mazda Motors of America (East) has opened a $7.2-million parts warehouse and training center here.

The 208,000-square-foot facility replaces a smaller one located in the area and, according to Eric R. Sundstrom, senior vice president and general manager, it will show the company's commitment to expand its American market and provide service and parts backup to consumers and the dealer network.

More than 10,000 square feet of the facility are devoted to service training of dealer technicians from the six Mid-Atlantic states and metropolitan New York. This area has three hydraulic lifts as well as diagnostic equipment.

Bob Cook, MMA (East) service manager, said this new testing equipment and a uniform teaching approach is a key to the training program.

The company offers 10 rotating courses 48 weeks per year to dealer service technicians.

Mazda East will maintain a more than six-month supply of parts at the warehouse valued at more than $6 million. Space is utilized above and between racks and employes ride to the appropriate bin in an order picker which lifts them to the storage location.

Once the parts are picked, they are stacked on unmanned pallet movers which are guided remotely by wire embedded into the floors and delivered to the shipping department.

Dealer orders are received through computers at Mazda East's Jacksonville (Fla.) headquarters and the information is transmitted to the warehouse.

Mazda officials said dealer stock orders, received on a weekly basis, will be processed and shipped within 48 hours and emergency orders received before noon will be shipped the same day.

GM awards prizes in college marketing contest

DETROIT. — General Motors has awarded first place in its 1984 Intercollegiate Marketing Competition to San Francisco State University.

The San Francisco student group placed first among 10 teams from major universities nationwide participating in the competition. Second place winner was the State University of New York at Albany and Texas A & M University, College Station, earned an honorable mention.

This year's competition challenged students to develop marketing strategies to promote sales of the 1984 Oldsmobile Cutlass Ciera.

The winning entry from San Francisco State University, entitled Arrive with an Advantage —the Oldsmobile Cutlass Ciera, included an analysis of marketing and advertising objectives, identification of a target market and a media plan.

As this year's winner, San Francisco State won $10,000, a plaque and letters of commendation for each team member.

Desai goes GM

LANCASTER, S. C.—Rai Desai, a native of India, has become owner of Rai Desai Pontiac-Buick-GMC Truck, Inc., here.

No Saturday overtime on holiday weekend

Week's auto output slips to 154,696

By Joe Wilssens
Staff Writer

Domestic auto production dropped last week as the industry scheduled no overtime on Saturday (May 26) in observance of the Memorial Day holiday.

U. S. auto makers forecast completion of 154,696 cars last week, down 9.11 percent from the previous week's 170,196, but 2.23 percent greater than the year-ago week's 151,322.

So far this year, 3,485,368 cars have been assembled, 33.78 percent above 2,605,366 finished during the comparable 1983 period.

Of last week's estimated car production in the U. S., General Motors accounted for 53.83 percent, followed by Ford Motor Co., 24.48 percent; Chrysler Corp., 15.13 percent; American Motors, 3.10 percent; Honda, 1.94 percent, and Volkswagen of America, 1.52 percent.

GM recorded a production milestone last week. The company produced its 2-millionth car of 1984 Thursday (May 24), nearly six weeks earlier than in 1983.

Chrysler's Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two 9-hour daily shifts last week while the company's Jefferson (Detroit) facility worked two 8½-hour daily shifts.

Saab invests $250 million on first new car in 17 years

NORRKOPING, Sweden.—Saab's first new car in 17 years represents an investment of $250 million.

The 9000 model will mean more competition for the fast, luxury models of BMW, Mercedes-Benz, Audi and Volvo.

The 9000, introduced to the press here, will go on sale in Sweden in November and in the rest of Europe early next year. It will reach the U.S. in the 1986 model year.

Robert A. Sinclair, president of Saab - Scania of America, would give no sales predictions beyond saying that it will eventually account for half of Saab's volume in America.

The 9000 is an all-new model, styled by ItalDesign. The 175-HP turbocharged 16-valve engine is a modification of the 900 engine. But because it is transversely mounted in the 9000, a new five-speed manual gearbox was developed.

An advanced ZF automatic transmission also will be offered in the 1986 model year.

The 9000's targets are BMW 528, Audi 5000 Turbo, Volvo 760 and the new 16-valve Mercedes-Benz 190. Saab says its 137-MPH car has better interior space than any of them.

Begun as the X29 project and more recently codenamed the NGS (New Generation Saab), the 9000 was originally to have been a joint project with Fiat Auto's Lancia division. But the companies soon discovered they wanted different things, with the result that only 12 parts are now common to both models. Lancia's version also will be launched in the fall.

Saab will build 10,000 9000s in 1985, the first full year of production. But Saab has the flexibility to make up to 100,000 each year, thanks to recent investments that lifted total capacity to 120,000 a year.

Saab Car Division Chief Executive Sten Wennlo confirmed Saab has a contingency plan — not yet approved by the board —to lift overall output to 145,000.

U. of Virginia wins top prize in GM contest

DETROIT. — The University of Virginia took first place in General Motors' eighth annual Intercollegiate Business Understanding Competition.

The University of Michigan took second place and Yale University received an honorable mention.

This year's competition, involving graduate students enrolled in religious studies programs or ethics courses from six universities across the country, examined the subject of business ethics in a changing and diverse world.

The University of Virginia team won $10,000; the University of Michigan received $7,000 and Yale received $2,500.

Holiday trims Canadian output of cars, trucks

The Victoria Day holiday (May 21) shortened work schedules and kept Canadian auto and truck production totals low last week.

The four-day work week resulted in an auto production forecast of 20,439 units last week, 6.40 percent below the previous week's 21,836 and 10.81 percent lower than the year-ago week's 22,915.

To date this year, the manufacturers have completed 467,074 cars, 9.96 percent greater than 424,770 assembled at this time last year.

Canadian truck output last week also slipped below the prior week's total but remained above the year-ago total.

The makers targeted production of 14,798 trucks last week, down 297 units from the previous week's 15,095, but was 36.55 percent higher than the year-ago week's 10,837.

Year-to-date, 345,871 trucks have been completed, 59.99 percent greater than 216,182, the 1983 total at this point.

Chrysler Corp. estimated production of 1,895 Plymouth Voyagers, 1,905 Dodge Caravans and 760 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 88,607.

Overtime out; truck production declines 7 pct.

A lack of Saturday (May 26) overtime in connection with the Memorial Day holiday caused domestic truck production to slip last week.

The makers slated assembly of 61,634 trucks last week, off 7.45 percent from the previous week's 66,594, which was the highest of 1984. Last week's production estimate was 29.66 percent greater than the year-ago week's 47,535.

Year-to-date, 1,302,465 trucks have been assembled, 44.29 percent better than the 902,692 finished at this time last year.

No domestic truck assembly overtime was reported last week.

GM buys 10 percent of consulting firm

WINTER PARK, Fla.—Philip Crosby Associates, a management consulting firm, announced that General Motors has purchased 10 percent of the company for $4 million. GM also has a three-year option for an additional 10 percent.

The 110-person firm was started in 1979 by Crosby, a former vice president of ITT Corp.

Chrysler wins OK to sue on GM-Toyota

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Chrysler Corp. has standing to sue General Motors and Toyota in the District of Columbia over the GM-Toyota Joint Venture (JV) in Fremont, Calif., and Toyota can be sued in this jurisdiction, according to a 58-page opinion filed last week by Federal District Judge Thomas F. Hogan.

This ruling is counter to the Justice Department's position that Chrysler does not have standing to sue the auto makers.

Chrysler filed suit to stop the proposed JV in early January.

Lee A. Iacocca, Chrysler chairman, said, "I am pleased by the court's decision that Chrysler should have the chance to prove our case, and we will proceed as quickly and vigorously as we know how. We are determined to get at all the facts through the legal process of discovery.

"When we have the facts, we are confident that we will prove that this JV is illegal. It should never have been approved by the FTC in the first place.

"Fortunately, it is now clear that the FTC's narrow 3-2 decision will not be the last word in this serious matter. The GM-Toyota venture is a national issue that will affect us all and demands open and candid discussion," Iacocca said.

A GM spokesperson in Washington said, "We regret the judge ruled against our motion but we are confident that the merits of our case will be proven in court."

• Rep. James Florio, New Jersey Democrat, whose House Subcommittee had held hearings on the proposed GM-Toyota JV, welcomed Hogan's go-

Custom-car report inside

Renewed by the economic upturn, the specialty-car industry has rebounded with a vengeance, according to the annual report on the custom market found in today's AUTOMOTIVE NEWS.

The special section, which follows Page 26, introduces new models and trends among customizers, kit-car makers, limousine builders, armorers and low-volume builders. Industry directory begins on Page E-26.

Due from Buick

Jim Dunne

Riviera in review

Buick's E-body, or GM30 car, shrinks to a 108-inch wheelbase in 1986 from the current 114 inches. Those who might have had trouble parking a 206.6-inches-long '84 Riviera can look forward to a shorter overall length of 185 inches. A cross-mounted V-6 gasoline engine will be standard; diesel will be optional. The '86 Riviera will be built at GM's new Detroit-Hamtramck (Poletown) plant along with the Oldsmobile Toronado, Cadillac Seville and Cadillac Eldorado.

Jim Dunne

Going front-drive

The 1986 version of Buick's LeSabre drops to an overall length of 194.2 inches from the current 212 inches, riding on a 110.8-inch wheelbase compared with 116 inches. LeSabre imitates Electra with front-wheel drive and a front-hinged hood. Engines will be cross-mounted in these H-bodies, also known as the GM70 line.

U.S. importers feel pinch from strike in German plants

By Jenny L. King
Staff Writer

The three-week-old strike in Germany by members of the largest union in the world has brought that country's auto industry to its knees, but the effects so far have only pinched related business on this side of the Atlantic.

By the middle of last week, the conflict had left more than a quarter of a million German workers temporarily jobless as the striking members of I. G. Metall were joined by those unemployed through lockouts and layoffs at factories unable to get supplies.

I. G. Metall, a metalworkers union claiming membership of some 2.6 million, began strike efforts May 14, demanding 35-hour work weeks with no decrease in pay plus the creation of more jobs for the unemployed.

Management is reported to insist on continuing the current 40-hour week and says adding to employment would greatly increase costs and jeopardize job security in the years to come.

Since the strike began, automotive components and assembly plants have closed one by one, including those of the giants Mercedes-Benz, BMW and Volkswagen. Other major European auto makers who buy German parts also are faced with production problems as their supplies dwindle.

The strike and its aftermath undoubtedly will hurt import-car sales in this country, but as yet it has only made headlines. Officials in the North American

Announcing stickers during labor talks presents a problem

GM facing a major decision on pricing of '85s

By John K. Teahen Jr.
Managing Editor

In the next few months, General Motors must make a major decision on pricing but, in the words of Chairman Roger B. Smith, the corporation "hasn't even begun" to think about it.

The situation is this: The contract negotiations with the UAW will likely be reaching a critical point when GM announces the prices of its '85 models. This makes pricing a much more delicate matter than in other years. The present contract expires Sept. 14.

It seems inconceivable that GM isn't working on the problem, but that's what the chairman said.

At a news conference following GM's annual shareholders' meeting, Smith was asked about the problem of pricing cars during contract talks. He replied, "We haven't even begun to think about our '85 pricing. We still have a lot of '84s to sell."

GM has many options in early-'85 pricing. Here are three scenarios it could follow:

1. "Damn the torpedoes." Announce the expected $200-$300 average hike at the usual time, despite the fact that labor talks are in progress. GM could cite the usual whipping boys of inflation and higher costs of materials, freight, etc.

2. "Play it cool." A small price increase for introduction day, followed by a larger bump after the contract is settled. Guess who'd get the blame for the second boost? Or maybe price some models early and some later.

3. "It's all *their* fault." Hold the line on '84 prices for early '85 models and put the full '85 increase in effect after a new agreement is reached, with or without a strike. The UAW, whose image isn't the greatest these days anyway, would bear even more of the onus. "We wouldn't have raised prices at all," GM might say, "if it hadn't been for that inflationary contract that was forced upon us."

Just how anyone "forces" GM to do anything is another matter, of course.

Ford Motor Co. faces the same dilemma since Ford also is bargaining with the UAW this summer. But Ford usually lets GM price first, so the situation isn't nearly so acute in Dearborn.

GM has already solved part of its problem. The company is extending the '84 model year for its small cars to improve its overall '84 CAFE average. The '84 run will be extended for two or three months on those autos, so pricing them won't come up until later in the year. Involved are Chevette, Pontiac 1000, Fiero and the J-cars.

For the last dozen years, GM has been pricing its new models in August, several weeks before introduction day. That includes 1976 and 1979, which were labor negotiation years.

In 1976, there was no post-contract boost. In 1979, some models were priced in August and the balance on Oct. 1, after an agreement was reached. But 1979-80 (the '80 model year) was a crazy period. It was the time of "interim pricing," when stickers shot up every quarter.

• At the meeting itself, shareholders didn't raise much fuss about the large bonuses to GM executives. After all, shareholders have seen their per-share dividends double in the past year.

Veteran Louis Gilbert, however, did suggest that bonuses be limited to 100 percent of a person's salary. That would have been costly for a lot of GM brass last year. Their bonuses were more on the order of 150 percent of salary.

The usual stream of interesting trivia flowed from the session. Gilbert asked about adver-

Lincoln Mark VII to go racing

Hy-Tec Racing, Southfield, Mich., decided 30 years was a long enough breather for Lincoln to take from racing, so the team built a Mark VII Trans-Am car, to debut at Detroit Grand Prix support races. Fiberglass body panels are fit to a modified Speedway Engineering chassis. Engine is a 310-CID Tony Oddo Ford. Driver Russ Theus is a Ford engineer.

260 robotics firms on hand for Detroit show, conference

By Roger Rowand
Engineering Editor

Four days of demonstrations of the latest robotic technology and dozens of study meetings open today (June 4) in Detroit's Cobo Hall as ROBOTS 8 Exposition and Conference gets under way.

The conference is sponsored by Robotics International of the Society of Manufacturing Engineers (RI/SME). The ROBOTS 8 exposition is sponsored by the Robotic Industries Assn., formerly the Robot Institute of America.

Conference sessions focus on the theme of Merging Technologies—how more adaptable and intelligent robot systems are being developed by merging various technologies.

In 21 technical sessions, about 80 leading robotics authorities will discuss state-of-the-art technology, research, industrial applications and human implications of robotics. A refresher course on basic robotics is being offered daily.

According to RI/SME, this is the largest robots show ever staged. It features some 260 builders and suppliers of robots and robotic systems and components. Exhibits are introducing new models of robots in action and are demonstrating new capabilities and new controls, sensors, systems and services.

In number of exhibitors and floor space occupied, ROBOTS 8 is larger than the ROBOTS 7 show that attracted 20,062 persons to Chicago's McCormick Place in April last year.

There's little doubt that machine vision will be the center of a great deal of attention as the week progresses.

One of those exhibiting its vision wares is Itran Corp., of Manchester, N. H. The company has on display the Itran 8000 Vision Controller and is giving visitors a chance to test for themselves machine vision capabilities.

The company calls the Itran 8000 one of the most powerful vision inspection systems on the market.

• DeVilbiss Co., Toledo, maker of spray finishing robot systems, is introducing three new robots at the show.

The first is an electric arc welding machine. The second is a low-priced electric material handling robot. The third new entry from DeVilbiss is the TR-3500 spray finishing robot which the company says represents the latest in spray painting technology.

GMF Robotics Corp., Troy, Mich., a joint venture of General Motors and Fanuc, a Japanese robotics concern, is showing off its new S-110, a servo electric machine with an articulated configuration. It can stand alone or be integrated into an existing machine-robot configuration.

In addition, 13 GMF robots will demonstrate their abilities in assembly, manufacturing, sealing, arc welding and water-jet cutting.

To introduce its new articulated robot arm, Photon Sources, Inc., of Livonia, Mich., is holding a seminar tomorrow (June 5) on the laser as a manufacturing tool.

The no-charge seminar will present the latest information on CO2 laser technology, detailing basic hardware and systems. Such applications as welding, cutting and heat treating will be covered.

International Cybernetics Corp., Pittsburgh, is introducing its new ICC 3220 flexible automation controller which provides eight axes of robot control capabilities and includes a new generation of the company's DNP digital brushless servo technology.

The company has one other dramatic demonstration. No less than 13 ICC controllers are at work on the show floor at displays where they are operating robots, brushless motors and other equipment in a variety of other companies' displays.

At Senate committee hearing in Portland

Honda, Toyota fight local content

PORTLAND, Ore. — UAW-backed domestic content legislation would force U. S. consumers to pay higher prices for cars and would discourage investment in this country by foreign auto makers, according to representatives of two major Japanese importers.

American Honda Motor Co. and Toyota Motor Sales, U.S.A., presented arguments in opposition to the bill at a hearing conducted here last week by the Senate Commerce, Science and Transportation Committee.

Opponents also charged that the legislation would produce model availability in the U. S. as importers backed off from the domestic market and would trigger retaliation in the form of higher trade barriers to U. S. exports.

The bill last year won approval in the Democratic-controlled House of Representatives. However, prospects in the Republican-held Senate have been characterized as slim.

At hearings conducted in Washington, General Motors, Chrysler and American Motors opposed the union-supported measure. Ford officials said they might support the bill if U. S. auto makers are unable to attain a competitive balance with Japanese companies.

Chrysler and American Motors also stressed the need for a stronger yen against the dollar, protection from Japan's commodity tax and tax considerations for American firms that would help bring about the so-called "level playing field."

But U. S. manufacturers, along with the State and Treasury departments, have refused to endorse domestic content legislation, which would set minimum levels of U. S. materials in cars sold in this country.

At the Portland hearing, Toyota Group Vice President Harold Bracken argued that the bill would have several negative effects on the U. S. economy, including a limitation on consumer choices, a hike in auto prices, unemployment in other sectors and a weakening of America's international trade position.

Bracken cited a study by Wharton Econometric Forecasting Associates which showed that domestic content legislation would cause price increases ranging from 7 percent for full-size domestic luxury automobiles to 43 percent for imported subcompacts.

"Consumers are already suf-

Ford preparing Atlanta plant for Taurus, airplanes

ATLANTA. — Ford Motor Co. is expanding its assembly plant here for the 1986 front-drive Taurus program.

The $180 million modernization includes a 145,000-square-foot expansion of the body shop and a new 190,000-square-foot paint shop, bringing the total facility to 2 million square feet.

Proximity to Atlanta's International Airport dictates installation of instrument landing lights at the plant, as well as restrictions on roof height. Ford also takes advantage with an oversize billboard that flashes, "Have you driven a Ford lately . . .?" to potential customers in the landing pattern, according to a Ford spokesman.

The Atlanta plant currently builds LTD, Marquis, Thunderbird and Cougar models, all rear-drive cars. Architect for the expansion is Albert Kahn Associates, Inc.

Collier, 54, gives up high-level job at GM

By John K. Teahen Jr.
Managing Editor

David C. Collier, who once was considered a possible future chairman or president of General Motors, has retired from the corporation at the age of 54.

GM gave no reason for his departure, but Collier told Automotive News last week:

"I had what I consider a successful 27-year career at General Motors. Now, the principal players are in place for the next 10 years or so, so I thought it was time to seek a new career."

David C. Collier

He said he has no immediate plans "except to bring down my golf handicap," but he would like to get into some kind of small-business venture.

Collier was one of 10 vice presidents and group executives at GM. In the corporate hierarchy, the group executives rank just below the chairman, president and vice chairman and the three executive vice presidents.

Since 1980, Collier has been vice president and group executive in charge of the Operating Staffs Group. The group consists of the Sales and Marketing Staff, the Industrial Relations Staff, the Personnel Administration and Development Staff and the Materials Management Staff.

At press time, GM had not appointed a successor to Collier.

Collier joined GM in 1957 and spent the next 16 years in financial posts. He became treasurer of the corporation in 1971.

• On Nov. 5, 1973 — just a week after his 44th birthday — he was elected a vice president of GM and named president of GM of Canada. His financial background and his new job as an operating executive gave rise to speculation that he might be headed for the very top of the heap at GM.

Both chairman and president were mentioned. Collier's age and qualifications seemed to be right.

That speculation grew stronger when he was named Buick general manager on Oct. 5,

Plastic engine misses start flag for its first race

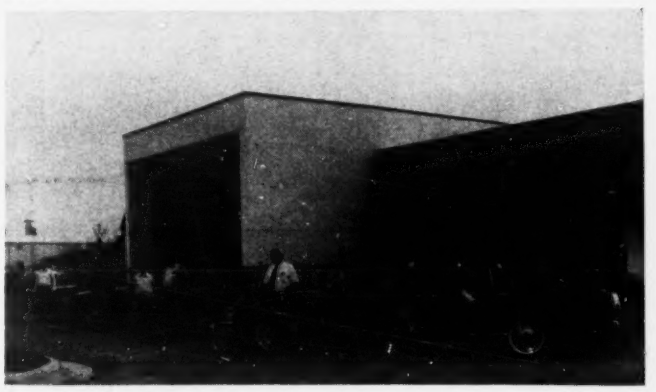
LIME ROCK, Conn.—A plastic engine scheduled to run in a Memorial Day race on the road course here failed to make the field.

Standard Oil Co. of Indiana's Amoco subsidiary said the engine will be raced at Watkins Glen July 8, however. It said the novel powerplant was not at fault in the non-appearance.

"There was a lack of time, practice time, but it will be ready at the Glen," an Amoco spokesman told Automotive News.

The engine will be in a Lola T616 racer for the event sanctioned by the International Motor Sports Assn. (IMSA).

It weighs 168 pounds, some 200 pounds less than a competing conventional engine. It contains 68 pounds of metal, 60 pounds of resin and 40 pounds of fiber reinforcement, Amoco said.



Cadillac limos delivered

Larry Hughes, president, Acme Livery Service, Kansas City, takes delivery of four '84 Cadillac six-door limousines —the first four of a nine-car order. The limousines were sold to Hughes by Ralph Mullen, Mullen Superior Coaches, Shawnee Mission, Kans. Mullen is a distributor for Armbruster/Stageway, Inc., Fort Smith, Ark.

February market share lowest since December, 1979

Import penetration takes tumble

By Jenny L. King
Staff Writer

Registrations of new imported cars in February claimed their smallest segment of the total U. S. market in more than four years this past February, as domestic sales and subsequent registrations considerably outdistanced them.

February imported-car registrations represented 24.85 percent of the market, down more than five percentage points from 30.01 percent a year earlier and their smallest share since December of 1979 when imports claimed 23.63 percent of the total.

According to registrations and sales figures compiled by R. L. Polk & Co., 194,381 new imported cars were tallied in the U. S. this February, up 13.90 percent from 170,656 in 1983. By comparison, domestic registrations were up 47.72 percent, leaving imports in their dust and with a greatly reduced piece of the pie.

The traditional top two imports, Toyota and Nissan, both lost ground during the month: 2.72 and 4.02 percentage points, respectively. Honda scrambled to gain second place and 2.62 percentage points. Volkswagen was up 1.02 percentage points and moved from sixth into fourth place among the top 10 imports.

Mazda slipped 0.99 percentage points, while Subaru was up 0.49 percentage points.

The major European imports showed strength: Volvo was up 0.66 percentage points, Mercedes was up 0.57 percentage points and Audi gained 0.26 percentage points.

• Ten imports claimed 89.24 percent of the February import market, down slightly from 90.26 percent a year earlier.

Import registrations for the first two months of 1984 were up 10.56 percent from the preceding year's level. Polk reported 389,328 new import registrations compared with 352,137 in 1983. Their share of the market dropped 4.80 percentage points, to 25.45 percent from 30.25 percent.

Registrations were topheavy, with three makers taking 57.53 percent of the import total. Toyota stayed on top despite a loss of 2.74 percentage points, Honda indulged itself with a gain of 3.19 percentage points and Nissan tumbled 3.33 percentage points.

Mazda and BMW slipped in penetration for the two months as VW, Subaru, Volvo, Mercedes and Audi made inroads.

The top 10 imports represented 89.11 percent of the two-month total, down from 90.17 percent in 1983.

Japanese-built passenger cars accounted for 72.11 percent of all new imports in February, down from 78.86 percent a year earlier. German cars claimed 13.26 percent, up from 10.40 percent and Swedish products had 5.35 percent compared with 4.33 percent.

• Polk classifies U. S.-built VW Rabbits and U. S.-built Honda Accords as imports. They comprise the U. S.-source category which contributed 7.10 percent of the February total this year and 3.59 percent in 1983.

American Motors' Renault Alliance/Encore, formerly defined as imports, have been reclassified as domestics since last fall, and all present statistics reflect the change.

February registrations by county of origin were:

	Feb., 1984	Feb., 1983
Japan	140,174	134,579
West Germany	25,779	17,754
United States	13,795	6,127
Sweden	10,408	7,397
France	2,498	3,092
Great Britain	1,366	829
Italy	323	850
Ireland	38	28
TOTAL	194,381	170,656

Year-to-date registratitons by country of origin are as follows:

	2 Mos., 1984	2 Mos., 1983
Japan	282,951	276,851
West Germany	49,735	38,192
United States	28,388	12,629
Sweden	19,646	15,147
France	5,124	6,044
Great Britain	2,831	1,874
Italy	591	1,317
Ireland	62	83
TOTAL	389,328	352,137

New imported truck registrations totaled 57,114 in February, up 95.39 percent from 29,231 a year earlier. The breakout by major manufacturer was:

	Feb., 1984	Feb., 1983
Toyota	20,468	9,901
Nissan	17,704	6,409
Mazda	9,915	4,174
Dodge Ram 50	3,258	—
Ford Courier	—	2,218
Others	5,769	6,529
TOTAL	57,114	29,231

Truck registrations for the first two months of 1984 were up 59.35 percent, to 105,898 from 66,455. Numbers for the top manufacturers were:

	1984 2 Mos.,	1983 2 Mos.,
Toyota	40,238	21,675
Nissan	29,200	16,521
Mazda	18,167	7,949
Dodge Ram 50	6,076	—
Ford Courier	—	6,420
Others	12,217	13,890
TOTAL	105,898	66,455

new cars and only one other was as satisfying as this Riviera, a '73 Citroen SM. That car was far too advanced and safe for the regulators to tolerate.

When I sought information at several Buick dealerships, I was told by both service and sales personnel that the turbo model was to be avoided, and they did not care to be involved in the sale of one. Mr. Reuss will probably get better cooperation under the new GM setup. — **Gordon Dhein,** Hop-

Sedoff named to head Isuzu's Western region

LOS ANGELES.—Gregor Sedoff has been named manager of the Western region for Isuzu Motors. Sedoff, who most recently served as vehicle supply manager, succeeds James R. Morrell who has moved to a position at Isuzu Truck of America.

William Shaw has been named to replace Sedoff as vehicle supply manager, and Joseph Totaro has been selected to replace Shaw as Western regional sales manager. Don Bruen, a zone sales manager for the Northeast region, becomes the regional sales manager in that region replacing Totaro.

Month's total is 730,540

May car output highest since 1979

By Joe Wilssens
Staff Writer

U. S. auto manufacturers concluded May production with their best totals for that month in five years.

Domestic auto makers wrapped up May production at an estimated 730,540 cars, up 19.50 percent from 611,350 units assembled during the year-ago month. It is the best May output since 935,198 cars were completed in 1979.

Assembly totals for May were 7.62 percent better than the April, 1984, build of 678,836.

The industry targeted completion of 136,303 cars last week, down 11.77 percent from the previous week's 154,490 due to Memorial Day holiday-shortend work schedules. Last week's tally was 6.57 percent greater than 127,900 assembled during the year-ago week.

So far this year, 3,621,465 cars have been completed, a 32.12 percent improvement from 2,741,097 units finished at this time last year.

Breakdown for the week by company was: General Motors, 53.85 percent; Ford Motor Co., 22.91 percent; Chrysler Corp., 17.28 percent; American Motors, 2.82 percent; Honda, 1.76 percent, and Volkswagen of America, 1.38 percent.

Auto producers last week scheduled 13 plants for daily or Saturday overtime.

At GM, seven plants worked Saturday (June 2) overtime shifts. They were: Arlington (Tex), Detroit, Doraville (Ga.), Flint (B and G lines), Framingham (Mass.), Lordstown (O.) and Oklahoma City.

Chrysler scheduled daily and Saturday overtime at all five of its auto facilities. The company's Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two daily 9-hour shifts while Jefferson (Detroit) worked two daily 8½-hour shifts. All five plants scheduled two 8-hour Saturday shifts.

Ford's Wayne (Mich.) facility also scheduled Saturday overtime.

Ford announced that a second shift will be added at the company's Atlanta facility July 30. The extra shift will employ 1,200 additional workers building LTD, Marquis, Cougar and Thunderbird models.

GM's seat-belt insurance worth little, Nader says

WASHINGTON — General Motors' free one-year $10,000 accident insurance certificate for new-car buyers who die while wearing seat belts was criticized by Ralph Nader and the National Insurance Consumer Organization.

The consumer group valued the certificate at 89 cents for people who wear seat belts. That would have been the payoff per belted victim in 1983 if everyone wore seat belts and fatalities were thereby cut in half, according to NICO.

". . . If the threat of death itself only gets 15 percent of the people in this country to wear seat belts, the possibility of someone's family getting a few thousand dollars will have marginal, if any, effect in terms of getting people to buckle up," Nader said.

He called on GM to end its opposition to passive restraints.

A GM spokesman said insurance payout statistics aren't what is important: "It is no secret that GM is a strong advocate of getting people to use seat belts," he said. "What this $10,000 is saying is, 'Hey, use your seat belts.'"

Caldwell cited by Hall of Fame

DEARBORN. — Philip Caldwell, chairman and chief executive officer of Ford Motor Co., has been cited by the Automotive Hall of Fame as Industry Leader of the Year.

The award was presented here during the Automotive Hall of Fame dinner.

Truck production for May reaches five-year high

Domestic truck manufacturers targeted completion of 285,032 units during May, the best build for that month since 338,961 were finished in 1979.

Last month's total was 11.05 percent higher than the 256,669 completed in April, 1984 and 36.52 percent higher than the 208,784 finished in May, 1983.

Because of the Memorial Day holiday, U. S. truck makers slated assembly of 52,797 units last week, down 17.44 percent from the prior week's 63,948. Last week's build remains 22.24 percent ahead of the year-ago week's 43,191.

Year-to-date, manufacturers have produced 1,357,576 trucks, 43.76 percent greater than 944,374 finished at this time in 1983.

Five truck facilities scheduled Saturday overtime last week.

General Motors scheduled extra Saturday (June 2) hours at four plants. They were: Detroit, Janesville (Wis.), Lordstown (O.) and St. Louis.

Ford Motor Co.'s Kansas City facility also worked Saturday.

Canadian makers schedule highest car total of 1984

Canadian auto and truck production rose last week as the manufacturers returned to regular work schedules following the previous week's Victoria Day holiday.

May auto production was targeted at 106,079 units, 0.21 percent greater than 105,854 completed during the fifth month last year. May's output was 9.34 percent higher than the April, 1984, build of 97,020 cars.

Canadian auto makers slated production of 25,012 units last week, 16.05 percent above the previous week's 21,553 and 15.34 percent higher than the year-ago week's 21,685. Last week's build was the highest weekly auto output recorded this year.

So far this year, the manufacturers have assembled 493,200 cars, 9.79 percent greater than 449,216 autos completed at this time last year.

Canadian truck manufacturers estimated production of 75,890 trucks during May, an impressive 47.76 percent improvement over the May build of 51,359 trucks last year. May's tally was 7.54 percent better than the April, 1984, assembly of 70,573 trucks.

The makers scheduled completion of 17,938 trucks last week, 9.96 percent better than the prior week's 16,314 and 55.07 percent higher than the year-ago week's 11,568.

Year-to-date, 365,325 trucks have been completed, 59.32 percent more than the 229,298 assembled at this point in 1983.

Chrysler Corp. estimated production of 2,286 Dodge Caravans, 2,274 Plymouth Voyagers and 912 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 95,035.

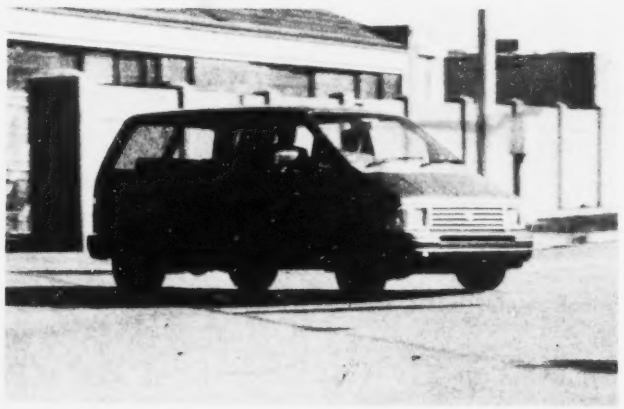
Aerostar profile



Jim Dunne

Rear-drive for upcoming Ford van

Ford's Aerostar commercial van/passenger wagon will have rear drive like the current passenger van, which will continue to be built after Aerostar's introduction later this year. With a 2,000-pound inside load capacity and strength to pull 5,000 pounds, the new 174.9-inch van will be available with three engines coupled with either five-speed manual or four-speed automatic transmission.

U.S. makers face decade of fierce battles for sales

By Michelle Krebs
Financial Editor

U.S. auto manufacturers face stiffer competition for sales on their own turf in the next decade than they have ever experienced before, according to the latest Automotive News World Outlook.

The quarterly service of Data Resources, Inc. (DRI), and AUTOMOTIVE NEWS shows U.S. car sales holding at the 10.6-million-unit level through this year and next, then rising slowly to peak at 11.86 million by the end of the decade.

However, expansion of domestic manufacturers' sales appears to be over for now. Domestic sales will hit 8.1 million units this year but are expected to drop below 8 million by mid-decade. Only in the light-truck segment, which includes the popular minivans, will U.S. car companies experience growth, the survey found.

"Total (U.S.) car sales will be increasing through 1990 at a reasonable clip but, unfortunately, virtually all of the increase will be going to cars sourced offshore, which will be virtually all Japanese," said John Hammond, DRI's U.S.-based auto analyst.

"The volume for what we have, up until now, considered traditional U.S. manufacturers could actually decline.

"Internationally, the issue is everybody is trying to get into everyone's backyard," Hammond added. And, for now, the U.S.' backyard appears greenest.

Japanese auto makers will continue direct exports to the U.S. in order to appease their unions by maintaining employment in their home factories and to produce profits for plant modernization.

"If anyone's going to make direct export growth, then the Japanese are going to want it for themselves," said John Lawson, DRI's London-based auto analyst.

However, not only will the Japanese compete via direct exports to the U.S., they will have their own plants on U.S. soil for final assembly. Sales from those plants will be counted as U.S. domestic sales.

If the Japanese auto companies follow through on present plans, Lawson said, they will have a half million units a year of capacity in the U.S. by the end of the decade, and that number could easily reach a million units by 1990.

Present plans call for Japanese auto makers to build annually 350,000 Hondas, 200,000 Toyotas and 200,000 Nissans in the U.S. by the end of the decade.

"It's fairly clear that Mazda and Mitsubishi aren't going to be left out, and they're all formulating at least contingency plans for American production," said Lawson. Mazda, in fact, has been shopping for a U.S. location.

The Japanese car companies are not the sole threat to the domestics; the other comes from across the Atlantic.

European auto makers — especially luxury-model producers

Anti-subsidy hearing raises host of questions

FTC to probe bootlegging by fleets

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The FTC is opening an investigation into NADA charges of fleet/lease companies "bootlegging" cars in direct competition with dealer new-car sales.

So far this is the only real action amid the great brouhaha raised by the revised NADA anti-fleet-subsidy bill before a House Commerce subcommittee.

Hearings on the revised bill, H.R. 5305, were held last week.

Whether the FTC investigation by the Bureau of Competition will extend to alleged dealer injury from the fleet/lease company high-volume sales in the used-car market where dealers compete and whether it will also extend into the area of price discrimination between retail sales and sales to leasers is not yet clear.

In fact, the first questions to be addressed are whether there are price differences that are not cost-justified and whether dealers and fleet/lease companies are in direct competition — and answers here should determine whether the existing Robinson-Patman Act and/or section 5 of the FTC Act are adequate remedies.

If so, then the special bill backed by Rep. Gene Taylor, Missouri Republican (a former Ford dealer), and NADA may not be needed.

Another issue that muddied the waters considerably was that all sales to fleets and lease companies are made through franchised dealers and all dealers who now merely sell cars could also become lessors and thus reap the incentives they label "unfair."

But Taylor—joined by Rep. James J. Florio, New Jersey Democrat—did not think dealers should be forced to become lessors to overcome alleged price discrimination or to erect what might be a mere shell of a corporation.

On the other hand, both Ford Motor Co. and General Motors noted that since the vast majority of dealers are already lessors, they are not affected by the discrimination — excluding, of course, the charges involving "fleet dumping" of used cars and "bootlegging."

• Taylor and NADA maintain there is direct competition between fleets and dealers.

During the hearing, both auto makers and fleet/lease companies contended that their markets are different — the primary difference whereas the fleet buyer does his own preventive maintenance and service.

In addition, it was noted that manufacturers sometimes used fleets for cars which the makers were finding hard to sell — what Florio described not as the free market working but market "intervention" or "subsidy" by the manufacturers. But there was not even agreement on who got the hot-selling models—dealers or fleets.

While Taylor and NADA view the bill as one to preserve the franchise system as the best possible way to distribute cars, the leasing companies, the FTC and the Justice Department view the dual distribution as being more efficient both from the manufacturing and consumer angles.

The troublesome question of what effect the NADA bill barring any price discrimination would have on consumers was not clear. As Rep. John Dingell, Michigan Democrat, noted, sales to utilities, for example, would become part of rate-making and

Chrysler offers incentives on H-car demos

DETROIT.—Chrysler notified dealers of a demonstrator incentive program on its 1985 H-cars, the Dodge Lancer and Chrysler LeBaron GTS. Orders must be placed by July 15, and the units must be kept in service for at least 60 days. Dealers get $300 on high-line Lancer and LeBaron GTS models, $500 on premium Lancer ES and $600 on premium LeBaron GTS models. Depending on size of their dealerships, they can order from one to four units (the top number is for dual Dodge and Chrysler-Plymouth outlets).

NHTSA subpenas data on GM A and J-cars

April up 15 pct. over last year

Another big gain for shop volume

By Francis J. Gawronski
Service Editor

Service and parts business in new-car dealerships continued to rebound with the nation's economy in April as the rate of growth, although slightly below that of March, topped 15 percent for the fourth consecutive month.

According to the Automotive News Service Index, shop volume in April amounted to 115.1 percent of the business recorded in the same month of 1983.

In January, parts and service business opened the year at 118.5 percent of the year-earlier volume and jumped to a record 126.2 percent of 1983's business in February. In March, shop business was 115.3 percent of the volume the year before.

The increase in April marked the 14th consecutive month in

Table on Page 65.

which shop volume outpaced the business recorded the same month the year before.

April also marked the 12th consecutive month that all five indicators used in compiling the Service Index scored gains, with shop parts sales — those used on both customer-paid and warranty repairs, up 21.4 percent.

Sales of all parts and accessories were up 17.9 percent, followed by gross profit on all labor, parts and accessory sales — the most important indicator from the dealer's viewpoint—up 16.8 percent.

Total labor sales (both customer-paid and warranty) increased 15.4 percent, while repair orders written climbed 6.3 percent over the year-earlier total.

Figures used in the Service

Chrysler to buy Mitsubishi V-6; pact is extended

By Kathleen Hamilton
Assistant Managing Editor

Chrysler Corp. will continue to buy Mitsubishi cars through 1995 and a new Mitsubishi V-6 engine for five years beginning in late 1986, the companies announced.

The sales agreement had been scheduled to end in 1990. The new agreement, scheduled to be signed by the end of this year, also gives Mitsubishi's own U.S. marketing arm, Mitsubishi Motor Sales of America, a potentially larger share of any increases allowed the parent company if export quotas are raised.

And it spells out what shares MMSA and Chrysler would take, should Mitsubishi begin building cars in the U.S.

Chrysler said the Mitsubishi fuel-injected V-6 will be used only in its larger cars and minivans. Its development of its own V-6 for trucks will not be affected, a Chrysler spokesman said.

Chrysler Chairman Lee A. Iacocca has said Chrysler is considering its shuttered Windsor engine plant as the source of the truck V-6, if it gets the final green light.

The number of V-6 sales to Chrysler is still being negotiated. Right now, Chrysler buys more than 200,000 Mitsubishi 2.6-liter fours annually. They are used in Chrysler minivans, Dodge 600, LeBaron, E-Class, New Yorker and Town and Country.

The Mitsubishi 2.6-liter will be phased out in favor of the more powerful V-6, still under development in Japan.

• Chrysler and Dodge dealers have been selling Mitsubishi cars and trucks since 1970. The new agreement assures that the supply will continue until March 31, 1995. The contract will be renewed annually thereafter, but a five-year notice of termination is required.

The pact is especially important to MMSA, which was launched amid "voluntary" export quotas. The result has been a company with enough cars to sell in less than half the country.

"What this new agreement does through 1995 is to clarify the distribution of any available volume increases between the two chains of distribution," said Richard Recchia, MMSA executive vice president.

"Under the previous agreement, it would have been possible that between now and 1990, we would have been getting a miniscule share of any increase" allowed under any quota increases, he said.

"For three or four years, we wouldn't be able to grow," Recchia continued. "Growth is a very essential part of our plans now.

"We (at MMSA) view it as positive."

Chrysler, too, will benefit from the pact. As reported in February by Automotive News, the company was seriously shopping for more-powerful engines, especially for its hot-selling minivans.

The pact also strengthens Chrysler's position with Mitsubishi.

Even before Chrysler's financial problems, rumblings in Tokyo had Mitsubishi unhappy about what it viewed as Chrysler's less-than-aggressive marketing of its products.

For mini fires?

The Windsor fire department, protector of Chrysler's minivan assembly plant, became the first Canadian fire department to take delivery of one of the vans. The Plymouth Voyager is painted Safety Yellow.

May sales top million; best month since 1979

By Jenny L. King
Staff Writer

In spite of an upward creeping of interest rates on new-car loans, May new-car sales moved ahead at an ever-increasing pace, reaching a grand total that was the best for any month since May, 1979.

Domestic sales climbed to their highest number in more than five years, imports were up sharply compared with months earlier this year and hit their best total since May of 1979 when a record 255,495 imported cars were delivered to customers.

New-car sales topped the one-million mark in May, a feat they have not boasted since May, 1979. This year's May total was 1,046,805. Five years ago it was 1,052,503. One year ago, the grand total was 836,790.

May domestic sales of 803,273 were up 27.49 percent from 630,044 last year. Imports added to 243,532, up 17.79 percent from 206,746 and accounting for 23.26 percent of the market.

Year-to-date domestic sales were up 31.94 percent, to 3,518,700 from 2,666,877 last year. Import sales, which had been at or below 1983 levels, caught up in May bringing the five-month number to 1,006,809, up 2.89 percent from 978,500. Combined sales were up 24.14 percent, to 4,525,509 from 3,645,377.

• American Motors was the only U.S. auto maker to fall short of 1983 sales totals in May. With sales of AMC's Renault Alliance and Encore holding steady, the loss of its AMC products, Concord and Spirit, pulled it down 17.28 percent, to 15,131 from 18,291.

Giant General Motors was up 30.37 percent in May, to 493,670 from 378,677. Ford Motor Co. continued its healthy sales pace, up 30.03 percent, to 178,006 from 136,896. Chrysler was up 12.43 percent, to 94,880 from 84,391.

Volkswagen finished May with an 8.46-percent increase, climbing to 9,220 from 8,501, and Honda more than tripled its

Dividend hiked, bonuses approved at annual meeting

Chrysler gives a peek at P-car

By Michelle Krebs
Financial Editor

NEW ORLEANS. — Chrysler Corp.'s P-car, originally planned as a replacement for Dodge Omni and Plymouth Horizon, will be larger and more upscale than originally planned, Chairman Lee Iacocca said.

"It won't be your garden-variety vehicle of $5,000 to $5,500," he said at a press conference following Chrysler's annual meeting here. He added that it will be something between a compact and a subcompact—and not an entry-level vehicle.

The reason for the revised planning, he said, is that car buyers no longer want cars that look small, as they did during the gas crunch.

Many decisions remain to be made regarding the P-car, including where it will be built, Iacocca said, but plans should be finalized in the fall. Chrysler plans to spend $500 million to $600 million on the P-car project.

It is planned as a 1986½ model.

He did say the P-car would be American-built, though he said he didn't know what percentage of the car would be local content.

At the same time, Iacocca said Chrysler is hesitant to discontinue production of the Horizon and Omni models, since both are selling well.

Meanwhile, he said, Chrysler is looking at a number of possibilities involving Mitsubishi, including a joint venture in the U.S. Both companies are awaiting a decision on Japanese import quotas before pressing on with a joint venture.

"It's in the cards," he said.

The No. 3 auto maker, which has had an arrangement with the Japanese car company for 14 years, announced recently it has extended its agreement through at least 1995. Iacocca said that "rolling agreement" could well roll into the year 2000.

Chrysler will import Mitsubishi's V-6 engine to replace its own 2.6-liter engine, Iacocca said. The V-6 will be used in the minivans.

The Chrysler chief added that the company is being pressed for capacity but is "gun shy" about adding a lot more.

Meanwhile, the company's strategies, including expansion of its model lineup, remain in limbo pending a decision on import quotas and the outcome of its lawsuit to block General Motors' joint venture with Toyota. Chrysler expects the lawsuit to be wrapped up before December, when the first GM-Toyota vehicle is scheduled to be produced in Fremont, Calif.

In the meantime, Chrysler is "pressed for capacity," Iacocca said. He added the Belvidere plant will remain open, whatever the decision is on production of the Omni/Horizon, and that Chrysler is "60 percent" sure the second minivan plant will be the St. Louis plant.

He also said Chrysler is considering whether to build a new factory.

• In regard to executive incentive compensation, Iacocca said decisions should be made next month on how to dole out the money to executives.

Shareholders approved by 94.6 percent a proposal on incentive compensation, and the topic drew the most comments from shareholders.

Most of the 500 attending the meeting felt Chrysler executives deserved bonuses.

One shareholder, a former Chrysler worker from New Orleans, said Chrysler executives certainly deserve it, especially since professional football players, professional basketball players and "a curly-haired break-dancer," referring to singer Michael Jackson, make as much as the executives do in total.

Iacocca said the board will use common sense and prudence in distributing incentive pay.

"I think the management team that accomplished (Chrysler's turnaround) deserves to be recognized," Iacocca said in his address to shareholders. "We intend to pay them for performance; if I'm going to ask our executives to keep working 70 hours a week to meet our ob-

Would compete with Chrysler's DeTomaso and Cadillac's Callisto

Ford near decision on $30,000 sports car

By Dan McCosh
Reporter

Ford Motor Co. still has under consideration a two-seat, midengine prestige sports car in the $30,000 range by 1988, say company insiders.

It would compete with Chrysler's DeTomaso project and Cadillac's planned 2-seat Callisto built by Italy's Pininfarina, both aimed at the 1987 model year.

Although the company reportedly has given only lukewarm support to such a car, top-level executives at Ford's North American Automotive operations will be deciding soon whether to continue funding development programs for such a vehicle, and Ford has been shopping for an overseas partner to aid in design, or possibly manufacturing the car.

Ford's exoticar programs have been piquing interest of automotive buffs recently, particularly after a design staff prototype was photographed in a Florida gas station.

There also is rumored to be at least a second vehicle under consideration under the aegis of Ford's Special Vehicle Operations.

A one-off Ghia-designed project car based on the front-drive Fiesta chassis and dubbed the Barchetta also was unveiled last year in Europe, and Robert A. Lutz, executive vice president of Ford's International Automotive Operations, points out that the Barchetta was engineered to be produceable at relatively low cost.

Up to now, Ford hasn't attempted to emulate General Motors' interest in specialized sports cars such as the Corvette and Fiero, but the high visibility sought by the Cadillac and Chrysler projects likewise is tempting to Ford.

Support for the program, however, has been divided, with various groups within the company seeking the project.

The Design Staff project, code-named Cobra ME, has a significant number of structural fiberglass components and is partially a Ford exercise in use of structural composites to reduce the cost of a low-volume car.

As such, it presents one of several alternatives being considered before Ford commits to the program. Input from outside coachmakers such as Matra or Karmann also is being explored — with Latin American assembly another possibility.

Such outside sourcing has some similarities with Ford's importation of the Pantera, built by DeTomaso and sold through Lincoln-Mercury dealers in the early 1970s.

In this case, however, the role of NAAO in product engineering would be significantly greater.

Incentives don't cheer everybody

Jaguar begins buyouts of 20 pct. of dealers

By Joseph Bohn
Marketing Editor

Jaguar Cars, Inc., has begun making specific buyout offers to dealers, and some aren't too happy with the terms.

The importer in private meetings has begun offering the equivalent of a year's allocation of cars times $5,000 as an incentive for dealers to give up their franchises.

It is also offering to buy back parts equal to the dollar amount a dealer purchased this year, plus signs, tools and a lot of other so-called bric-a-brac.

Jaguar wants to terminate about 20 percent of its franchises (AUTOMOTIVE NEWS, May 21). This will enable it to increase allocations to the remaining dealers. They'll then be able to afford proper sales/service support deemed essential to Jaguar's future success, officials feel.

Jaguar had 189 dealers in the U.S. at the beginning of this year.

Michael Dale, vice president of sales and service, thinks Jaguar's offer is a good one.

"We took a lot of advice on what a fair deal was," he said, referring to NADA, AIADA and the National Jaguar Dealer Council which it consulted in formulating its offer.

To some smaller dealers, who have stuck out the lean years with British Leyland and Jaguar and whose livelihood as dealers depends on the Jaguar franchise, the offer appears less than attractive.

This is especially true since Jaguar has finally come into its own, and profit potential has never been better. Some dealers are averaging $6,000 gross profit per car, just on sales.

Jaguar's offer, which amounts to a year's gross profit, strikes them as "absolutely ridiculous."

"The benevolent English are not playing by the Marquis of Queensbury rules," said one observer.

"If you compare what we made last year to what they're offering, it's unfair, ridiculous," said an Eastern dealer. As a dual dealer, he cannot survive without both of his current makes.

"Most of our income comes from Jaguar. We'll be out of business. After you pay taxes on this money (franchise offer), what do you have left? What am I supposed to do for the rest of my life?" he lamented.

Another dealer, whose meeting was scheduled but hadn't occurred at presstime, said he'd made a sizeable investment in the franchise and "if they elect to terminate me, they'll have a helluva lawsuit."

"I suffered bad years and nightmares," he said. "If they offer me $5 million, I'll consider it. Otherwise, they can get out the Vaseline."

The fact that NADA report-

A Mercedes look from a Mustang

Thoroughbred Motorcars, Redmond, Wash., offers a kit to turn Mustang II componentry into a seven-eighths-scale replica of the Mercedes 540K. The fiberglass body is a single piece. The company says the car can be made for less than $15,000.

Nissan plant fully flexible with few cars

TOKYO, — Nissan Motor Co., Ltd., has introduced a full-scale flexible manufacturing system (FMS) at an affiliate supplier in Mexico.

This is the first system of its kind to be incorporated into the manufacturing line of an auto industry supplier, Nissan said. The system, developed jointly with Toyama Machine Works, Ltd., is designed to produce a variety of models in small volumes.

As Nissan continues to internationalize its manufacturing operations, there is a greater need for the enhanced efficiency of small-volume production of different models in overseas plants.

Moreover, Nissan said, reflecting increased competition from local auto makers, it is important to launch new models in local markets with minimal delay, as well as to further improve the quality and the performance of products.

• To meet these growing demands, Nissan and Toyama Machine Works developed the FMS line. Nissan said this is a new concept that represents a departure from conventional transfer machines and single-purpose machines.

Nissan listed these major characteristics of this line:

1. The line is composed of 31 units of simplified models of numerically controlled machines that are already on the market.

2. The units that make up the line feature combined horizontal- and vertical-direction machining for greater ease of maintenance.

3. The system enables the shifting of operations to other automotive parts, thus provid-

Thanks to program's critics and strong retail sales

Fleet allowances for '85 weakened

By Joseph Boha
Marketing Editor

Strong retail sales are taking some of the steam out of fleet allowance programs for 1985 models.

In announcing their new programs, General Motors and Chrysler Corp. also appear to be showing some sensitivity to critics of fleet subsidies like NADA and Ed Mullane, president of the Ford Dealers Alliance.

"Sure you take it seriously," said a GM insider of the federal anti-subsidy bill, HR-5305, now in the House of Represeniatives. "Any time the dealer organization is as polarized as they are on this one, it's serious."

He added, "With the '85 programs we announced, there isn't all that much room for the absues. The discounts aren't really that big."

Concurred Ron Pink, business manager of vehicle fleet sales for Xerox Corp.: "Market demand is so strong right now, there's less pressure by motor companies to have incentive programs as big as in previous years."

At Chevrolet, the Citation and Chevette are getting the biggest allowances. Chevrolet is offering free air conditioning or a $300 cash allowance on Citatioa.

Chevette customers can elect power steering, a custom interior and white sidewall tires or $200 in cash allowance.

Other Chevrolet cars, excluding the V-6 Camaro and V-8-equipped models, are eligible for free tilt wheel and stereo radio or $150 in cash allowances.

• Buick is offering a choice of free sport mirrors and power steering or $150 cash allowance on its Skyhawk.

The Skylark offers free air conditioning and the Consumer Protection Plan to buyers of six-cylinder engines. Additionally, if customers order the four-cylinder engine they get an extra $300 allowance.

There are no incentives on the new Buick Somerset Regal, the GM20 car.

The Century offers free stereo radio and tilt wheel or $150 in cash allowance, as does the Regal.

Chrysler seems to be pushing options this year.

For '85, it has a so-called Fleet Package on all front-drive models, excluding Caravan, Voyager and imports.

It offers air conditioning, stereo radio upgrade (from AM radio), automatic speed control and the 5-year/50,000-mile power train coverage for $760 on all lines which, it claims, ranges up to a $550 savings on "some models."

In lieu of the package, fleet buyers get $150 cash discount on the Omni/Horizon and $200 on just about all other front-drive domestic models, except for the Plymouth Caravelle/Dodge 600 four-door which gets a $400 allowance.

• The new Dodge Lancer and Chrysler LeBaron GTS come in for $200, as well.

GM seems to have experienced a bit of pull-ahead business this model year from buyers concerned about the possibility of a strike this fall.

But fleet sales generally should be very strong again in '85.

Xerox's Pink said his company planned to buy 6,000 vehicles this year — double the number in '84.

Xerox moved heavily into ans in '84 in matching vehicle types to territory rather than the driver's choice.

It bought 3,000 vehicles last year — one-third Chevrolet Celebrity wagons, one-third Ford Econoline vans and one-third Dodge Mini Ram Vans.

Drivers have reacted positively to all of them, Pink said. He added that improvements in Detroit's products, like fuel injection, have resulted in lower operating costs for his firm.

He said no decision has been made yet on what kinds of vehicles the company would buy in '85 or from whom — but he expected heavy van buying to continue.

Other big fleet buyers he's talked to, Pink added, also indicated robust buying plans for '85.

Renovation celebration

VANDALIA, Ill. — Vandalia Motor Sales here hosted an open house for about 1,000 people to celebrate its renovation.

U. S. cars up 22 pct. for March; imports slip

Month's registrations post solid gain

By Jenny L. King
Staff Writer

New-car registrations in March were up 6.77 percent over those of the preceding month and had a positive margin of 15.23 percent over March, 1983. They were the highest for the month since 1981 when domestic rebate programs swelled sales.

According to figures compiled by R. L. Polk & Co., while the market was on the rise, the imports' share of it continued to shrink, dropping to 23.80 percent this March from 28.37 percent a year ago.

Registrations for the total market added to 835,311. Of that number, 636,509 were domestics and the remaining 198,802 were imports. The U.S. cars were up 22.58 percent from 519,268 a year earlier and were up 8.26 percent from 587,946 the preceding month.

Imports were down 3.33 per-

Counter to trend in retail industry

Number of parts stores up

By Frank Gawronski
Service Editor

Contrary to the national trend that saw a decline in the number of stores in the retail field, the count of automotive parts outlets has increased almost 33 percent in three years, according to a study by the Automotive Parts & Accessories Assn.'s Foundation for Aftermarket Industry Research (FAIR).

The study, Retail Distribution of Automotive Products, recorded 38,000 auto parts stores in the U.S. in 1983, an increase of 9,400, since the study was first conducted in 1980, according to Pamela B. Smith, executive director of FAIR.

According to Smith, there are 1.75 million retail stores in the U.S. of which 518,700 handle some sort of automotive aftermarket product. The auto parts stores category, she said, includes chains and independents with more than half their sales volume going to retail customers.

Julian C. Morris, APAA president, credited much of the increase in auto parts stores to existing chains such as "Malone & Hyde, Perry Drug and Lucky Stores expanding or entering automotive retailing."

"This increase," he said, "is counter to the national trend that saw a drop in the number of all retail establishments.

• "Even though severe economic conditions forced closing of 58,000 retail outlets, consumers had as many places to shop for automotive products in 1983 as in 1980," Morris said.

In 1980, the survey indicates, 29 percent of the nation's retailers handled automotive items versus 30 percent in 1983.

Continuing the trend that began in the 1970s, the number of service stations kept declining, Smith said. The FAIR study found the number of stations dipped from 158,000 to 136,000 during the three-year period.

Also down, according to the study, was the number of new-car dealerships and tire stores, (see accompanying table), "evidence of the recession's severe impact upon these classes of retailers. There also were fewer variety stores handling automotive products."

"Consumers were still buying automotive products but shifting their sales to other outlets," Morris said.

The APAA survey found major gains in the number of specialty repair outlets, such as tuneup and quick lubrication shops, other repair shops, independent garages and drug stores with automotive sections. Discount, hardware and grocery stores recorded slight increases in the number of outlets handling automotive parts.

• "Drug stores have been particularly aggressive in entering the automotive aftermarket," Morris said. "Today, 30 percent of all drug stores carry some

shop talk

By FRANCIS J. GAWRONSKI

K mart expands, cuts back

K mart Corp., which claims to be the second largest retailer in the world with sales of $18.6 billion, has entered a new phase of the automotive aftermarket while cutting back operations in another service area.

According to Maxwell G. Parsons, president of K mart Enterprises, the automotive and sporting goods division of the retail firm, the first K mart Auto Parts Centers in the U.S. made their debut recently at four K mart discount department stores in the Mobile (Ala.) area.

While entering the automotive parts aftermarket on a field-test basis, K mart is reducing its automotive service operations by subleasing several hundred of its service centers across the country.

Aimed at the do-it-yourself market, Parsons said the auto parts stores will stock more than 10,000 different items, all at discount prices. Among the products offered in the do-it-yourself format are carburetor kits, shock absorbers, alternators, starters, brake pads and fuel pumps.

Parsons said assistance from experienced counter personnel will be available during all center hours. As a convenience to customers, he said the centers will be open at 8 a.m. daily, with separate entrance and checkout registers. The parts centers will be "free standing

Jaguar service to set up 18-month training cycle

By John A. Russell
New York Staff Writer

LEONIA, N. J.—Jaguar Cars, Inc., is expanding its service training program and working toward the goal of 18-month training cycles for technicians.

According to Phillip Ballingall, national service manager, while training has been conducted by the company for years, the new approach is more structured.

Dennis DeBruyn, national service training manager, termed it a "planned development program." He is putting together a group of courses which will cover the entire vehicle and then can suggest to a dealer which technicians should have specific courses.

"We will have the capacity to retrain every 18 months," he said.

Jaguar is spending five times as much on training now as in the past, he said.

DeBruyn, who recently joined Jaguar after holding a similar position with Volkswagen of America, added that he expects all courses to be in place by Oct. 1.

• The first course, a "threshhold" course, will be offered in the next few weeks and will start the cycle. This is a 4½-day course limited to new employes at a dealership and will cover such subjects as preparation - delivery - inspection and normal maintenance, according to Ballingall.

DeBruyn said the courses that follow will depend upon need and demand but there will be engine, chassis, electronics, auto transmission and climate control systems courses, among others. The length will be between two and five days. He said that all courses would be hands-on and performance-oriented.

Ballingall also said the com-

Of emission-analyzer manufacturers

Pa. service stations seek probe

By Maurie H. Orodenker
Staff Correspondent

HARRISBURG, Pa. — The Pennsylvania and Delaware Service Stations Dealers Assn., representing some 2,000 dealers; the Automotive Service Council, with 1,200 members, and the Associated Retail Gasoline Dealers have asked the state's attorney general to investigate possible antitrust law violations by manufacturers of the auto emission test analyzers to be used in Pennsylvania.

The three groups of service-station operators charge the manufacturers conspired to fix the rate of their monthly service charges for the equipment to be used in the state's emissions testing program.

The manufacturers are: Bear Automotive Service Equipment Co., which operates a plant in Bangor, Pa., with its main plant in Milwaukee; Hamilton Test Systems, of Connecticut, and Allen Test Products, of Michigan. The complaint is being reviewed, according to a spokesman for Attorney General LeRoy Zimmerman.

Protector, Forsythe offer consumer product line

ELMHURST, Ill. — Protector Corp. and Forsythe Racing, of Wheeling, Ill., have announced a joint venture relationship to develop and distribute a new consumer product line called Finish First.

The Finish First product name incorporating the Protector logo made its debut on the Forsythe Racing Skoal Bandit car in the recent Indy 500. The line is comprised of a carnauba paste wax, upholstery sealant, car wash, spray 'n shine, chrome cleaner, vinyl treatment and mag wheel cleaner.

The groups claim the three manufacturers are each charging a monthly service fee of $125 to service their computerized emission analyzers, which have been approved by the state's Department of Transportation (PennDOT).

Clay Gregory, vice president of operations at the Bear plant, denied the companies agreed to the same fees. He said Bear also charges $125 for the same service to California testing stations.

He also said the services provided by the three manufacturers differ. Bear is the only one, said Gregory, that provides free replacement supplies for its testing units, making the service charge a competitive one. The free supplies include testing gas to calibrate the machine before each inspection and change of filters.

Chevy provides all-state service for new Sprint

LOS ANGELES. — Purchasers of Chevrolet's new Sprint, available initially in nine Western states, will be able to receive service on the vehicles no matter where they travel in the U.S.

According to Robert D. Burger, Chevrolet general manager: All Chevrolet dealers in the states where the Sprint is initially being sold (Alaska, Arizona, California, Hawaii, Idaho, Nevada, Oregon, Utah and Washington) will have service, parts, trained technicians and essential tools required to provide full service for the cars.

Chevrolet dealers outside the nine-state area will be able to make repairs or adjustments of a standard nature, Burger said.

In addition, at least one Chevrolet area service manager in each zone has received specialized diagnosis and repair procedures training on the Sprint and will be able to assist dealers in resolving service problems.

Each of the 35 Chevrolet zone offices outside the nine-state area will also be equipped with a full set of Sprint "essential tools" necessary for service requirements of a more specialized nature. The "Warranty and Owner Assistance Information Booklet" in each vehicle contains the phone numbers and addresses of zone offices.

North Carolina dealers elect officers

The North Carolina Automobile Dealers Assn. has elected officers for 1984-85. From left, they are: Hubert B. Parks, Parks Chevrolet, Inc., Kernersville, treasurer; William P. Howard, Bell & Howard Chevrolet, Inc., Statesville, vice president; S. L. Shackleford, Dickinson Buick Co., Inc., Fayetteville, president; Guy P. Smith, Lexington Motor Co., Inc., Lexington, treasurer, and B. Wade Isaacs, Raleigh, executive vice president.

Contrary to trend in retail industry

Number of parts stores increases

Continued from Page 20

automotive products. This is a 1,600-store increase in three years, or 12 percent."

Morris said the survey indicates the department-store category remained relatively stable during the three-year period despite J. C. Penney Co.'s decision to get out of the automotive aftermarket business.

"This was due in a great part to Sears and Montgomery Ward," Morris said. "Both increased their commitments to their automotive lines."

In addition to explaining changes in the number of retail outlets from 1980 to 1983, Smith said the study sought to examine changes in product categories handled by the nation's retailers.

Aftermarket products were classified into five major categories: Chemicals, engine parts, safety/comfort/sound products, heavy parts and tires.

Generally, Morris said, the total percentage of retailers handling the five product categories showed little change. However, there were significant changes in product mix within the various classes of trade.

The most dramatic product change, according to FAIR, was in tires.

The number of tire dealers dropped by 2,600 from 1980 to 1983, and the total number of retailers handling tires fell by nearly 17,000 with sharpest declines occurring in service stations, new-car dealerships and auto parts stores.

"Perhaps because more auto parts stores are leaving sales to outlets equipped for installation," Morris said, "the percent of auto parts stores carrying tires dropped four percentage points to 34."

According to the study, chemicals, continued to be the most widely distributed products. They were available in 482,400 outlets, 93 percent of all retailers carrying automotive items.

The study, according to Smith, also examined retail operations by the number of the five major product lines they were handling.

Retailers carrying three or more categories were listed as full-line automotive operations; one or two categories were classified as intermediate-line outlets, and those with an assortment of auto products considered insufficient to qualify for intermediate were called limited-line outlets.

According to the survey, 41.5 percent of the 518,700 outlets selling automotive products to the public were full-line operations, 37.6 percent were intermediate, and 20.9 percent were liimted-line stores.

The greatest gain came from the intermediate-line outlets, increasing 13,500, or 7.5 percent. Repair shops accounted for 78.6 percent of the change, according to FAIR.

• Due mainly to the 26.5 percent dip in full-line service stations, FAIR noted that the percentage of full-line retailers fell from 43.4 percent in 1980 to 41.5 percent in 1983. There are only 62,600 full-line retailing service stations today, according to the study.

"The reduction in the full-line accounts has caused jobbers and traditional automotive warehouse distributors to move into retailing so that they can make up the lost volume, Morris said.

"The absence of product availability for consumers at service stations also has created tremendous market opportunities for other retailers," he said.

The survey found very little change in the limited-line category. The greatest activity was said to be among grocery stores, which grew by 1,700 outlets, or 6.9 percent.

Despite the considerable decreases in service stations and new-car dealerships, the FAIR report noted that other automotive operations brought the total number of service bays near the 1980 mark.

Bays per outlet ranged from an average of 8.7 for department stores to 2.0 for such automotive service operations as car washes, parking lots and recreational vehicle dealers.

Other information in the study includes geographic distribution and data on store sales volume. The study and a jobber supplement can be purchased from FAIR, 5100 Forbes Blvd., Lanham, Md. 20796.

New York dealers cancel Montreal convention

NEW YORK. — The Greater New York Automobile Dealers Assn. has canceled its plans for a convention in Montreal.

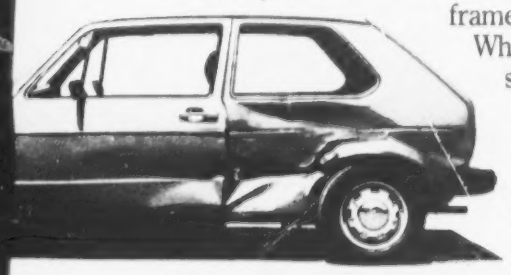
Instead, the association will hold its annual meeting June 26 at the Long Island Marriott Hotel.

Think of them as income-ing wounded.

New car sales will have their ups and downs, but you can always count on one thing: Accidents will happen.

So if you're looking for a constant source of aftersale revenue, just look at all those veterans of collisions, limping along, ready to be repaired. Somebody's going to get that business. Why not you?

All it takes is one wise investment in a repair system that can handle all unibodies, for every make and model. And take care of frame chassis, too.



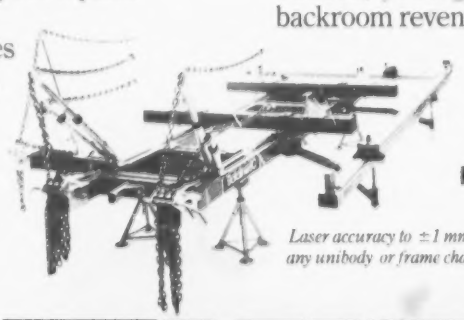
What it takes is a system like Dataliner. Dataliner can put you right into the thick of the collision repair business. It's easy to learn. And it can pull a car back into shape faster, easier and more accurately than anything else on the market.

You don't have to make a major investment in shop redesign or installation either. Dataliner is portable. And its space-saving footprint won't gobble up your square footage.

But what really makes Dataliner so effective is a special combination of measuring and pulling that no other system can match. We give you a choice of two patented measuring systems (laser and mechanical) and all the pulling power you need to turn bashed bodies back into beauties. And actually beat factory specs. That takes care of comebacks and liability problems and makes for satisfied customers. Once the word is out, anyone who values his vehicle is a potential customer.

Dataliner is expandable, too. With five complete hardware packages to choose from, you can tailor your system to your current needs and build it as your business grows.

So whenever you see those casualties of collisions, think of them as income-ing wounded. And think of Dataliner. Along with your new outlook, you'll get a whole new source of backroom revenue.



Laser accuracy to ±1 mm/up to five or more multiple pulls/portable/repairs any unibody or frame chassis/sets up fast and easy/modular in design.

For more information or a demonstration, call us today.

Ford researcher presents his views

Analyst: Imports hike all car prices

EDITOR'S NOTE: *The following view of the import-domestic struggle and its affect on new-car prices is that of a Ford Motor Co. analyst. It is not an official position of the company.*

The "economies of scale" is an accepted concept — if you build 300,000 cars from one set of blueprints, the cost per unit is lower than if you build only 200,000.

The fact that imported cars have reduced domestic volumes, particularly in recent years, is obvious to all.

No analyst, academician or journalist I have ever met has disagreed with those two statements.

The only conclusion one can logically draw from those two accepted concepts is that imported cars have, by reducing domestic volume, increased the cost of domestic cars.

It also is well known that importers raise their prices at roughly the same rate as the domestic increases.

The end result is that all cars, both domestic and imported, now sell at a higher price than if only domestic cars were sold at the same total volumes.

Not only does logic support the contention that imported cars caused an increase in the price of all cars, the concept is fully supported by data.

As shown in the accompanying table, cars in 1973 were purchased in the U. S. for dollars earned by working 26.7 weeks. That was the lowest ever. And 1973 also was the highest volume year ever for domestic car sales.

Those two economic facts are inseparable — the highest volume gave buyers the lowest cost relative to weeks of work.

Imports have increased their share of market from 15.4 percent in 1973 to 25.9 percent in 1983, thus reducing domestic volumes.

In 1983, the average car cost 33.2 weeks of labor. This data clearly supports the logic that imported cars have increased the price of all cars.

It is agreed that federal mandates have increased the transaction price of cars (the transaction price is what the buyer pays, it is not the list price) but the transaction prices shown in the table have been adjusted for that factor.

The accumulated mandated cost from 1970 through 1983 is $1,213, and that accumulation would have occurred with or without imports, so mandated costs have been removed from the price data as the year-by-year accumulation occurred.

Not shown, but available, is the fact that the weeks of work required to buy a car declined from 1960 to 1973. This was a period of relatively low import growth, with domestic volumes experiencing long-term growth.

Another factor that requires discussion is the proliferation of models. A company building one million cars of a single nameplate each year has a lower per-unit cost than a company building 333,000 of Car A, 333,000 of Car B and 333,000 of Car C per year.

Nameplate proliferation increases per-unit costs unless total volumes expand. In the 1960-1973 period, there was considerable nameplate proliferation as small cars, small sporty cars and the various mid-size cars came into the market.

Long-term volume gains, manufacturing efficiency improvements and the lower prices of smaller cars offset these proliferation costs in 1960-1970. Proliferation costs were contained, as was the low-level encroachment of imports, in the 1960-1970 period.

After 1970, no significant increase in nameplates was seen, so nameplate proliferation was not a significant factor in the post-1973 increase in car transaction prices relative to wages.

As a side note, the highest-volume nameplate in 1970 was the full-size Ford, with 837,200 sales. In 1983, the highest volume was 326,300 for Escort (Cutlass and Cutlass Supreme combined were in the same range).

• At this point we have removed government mandates and model proliferation from the list of significant reasons for the 1974-1983 increase in price relative to wages.

There are other factors to consider. One is the recent voluntary upscale movement to more large cars and more options.

Those actions do affect short-term transaction price movements, but transaction prices increased relative to wages in 1979 and 1980 when the mix of cars was moving to smaller, more austere cars.

Transaction prices in 1979 and 1980 went up less than list prices, but still went up more than wage rates, thus increasing the number of weeks required to buy a car.

As a corollary note, in 1981 and 1982, the years of the lowest domestic volumes in modern times, list prices on domestic cars went up more than the inflation rate. I can find no other time that that happened.

We can now remove mix changes as a dominant long-term reason for the increase in transaction price vs. wages that began in 1974.

Another factor to consider is the secondary economic impact of imported cars. The primary

Air-spring fault brings recall of 37,000 Lincolns

DEARBORN, — Ford Motor Co. is recalling approximately 37,000 '84 Lincoln Continental and Continental Mark VII cars for replacement of the solenoid valve that controls the leveling feature of the electronic air suspension system.

John P. King, service engineering manager of Ford Parts and Service Division, said that air suspension systems may become inoperative as a result of corrosion in the solenoid valve.

Ford said that about 1,000 of these vehicles equipped with 2.4-liter diesel engines also need replacement of the water-in-fuel sensor. The cars involved were built from the start of the '84-model production through April 4, 1984.

"The water-in-fuel sensor may be incorrectly wired, resulting in failure of the water-in-fuel warning lamp on the instrument panel to light," said King.

"If there is excess water in the diesel fuel and water is circulated to the injection jump, damage to fuel injectors could result."

We Care About Your Confidence!

Members of the National Auto Auction Association have always been strong supporters of the Federal Odometer Law and we encourage our customers to abide by this law. Evidence of our position is shown in the following resolution adopted by our Board of Directors, February 18, 1983:

RESOLVED, that whereas the National Auto Auction Association recognizes that the buyers of used vehicles, both private individual and automobile dealers, rely heavily on the odometer readings in determining the value of used vehicles, and

WHEREAS, the National Auto Auction Association acknowledges that odometer tampering throughout the nation, in both the private and public sectors creates severe problems for all segments of the automobile industry, and most especially for auto auctions, whose primary role is not of owner, but normally as a conduit for the sale, and

WHEREAS, the National Auto Auction Association was instrumental and is strongly supportive of the enactment of the legislation to prevent odometer tampering, and

WHEREAS, the National Auto Auction Association Code of Ethics states, "We will comply with the National, State and local laws and rules that regulate the conduct of the automobile auction business", and

WHEREAS, it is the belief of the National Auto Auction Association that the welfare of consumers, and dealers alike would be better served if the practice of odometer tampering by both the public and private sectors was totally eliminated, and be it

RESOLVED, that the National Auto Auction Association continues to show strong support for enforcement of the federal odometer law, and be it

FURTHER RESOLVED, that the National Auto Auction Association calls upon its members to support the law, and to work with local, state and federal authorities in their investigation, and be it

FURTHER RESOLVED, that the National Auto Auction Association believes that the final solution to the odometer problem lies not in the investigation or enforcement in only one aspect of the automotive industry, but in complete nation-wide enforcement which does not put any segment of an industry, at a competitive disadvantage, and be it

FURTHER RESOLVED, that the National Auto Auction Association calls upon all states to promptly adopt the universal title concept and to provide for the insertion of mileage on the title, and to take immediate steps to implement such a program, and be it

FURTHER RESOLVED, that the National Auto Auction Association strongly urges the manufacturers of automobiles, both domestic and import, to develop a tamper-proof odometer, and be it

FURTHER RESOLVED, that the National Auto Auction Association calls upon the congress of the United States to appropriate adequate funding, so that enforcement of the federal odometer law can be carried out on a uniform, and comprehensive basis through the nation, and be it

FURTHER RESOLVED, that all authorities involved with the investigation, enforcement, and adjudication of the perpetrators of this serious crime be directed to emphasize prompt investigations, strong enforcement, and to hand down severe penalties, including, but not limited to the suspension for one year of the business license of any automobile dealer who is convicted of violation of the odometer law, and be it

FURTHER RESOLVED, that private individuals who are found guilty of this serious crime also be handed down severe penalties including both fines and/or imprisonment for violation of the odometer regulation so as to protect the general public and consumer from such fraudulent acts.

Ford researcher presents his views

Analyst: Imports hike all car prices

Continued from Page 51

impact of imported cars — the one-for-one reduction of domestic cars — is well recognized. The secondary impact is seldom discussed.

In the secondary impact, the one-for-one substitution reduces the need for tires, steel, aluminum, etc. — the gut industries of our economy — and therefore reduces jobs in supplier industries, and those job reductions deepen recessionary cycles by reducing the purchase of shoes, clothing, appliances, etc., etc.

Recovery cycles also are limited by the secondary economic impact. Today's "recovery" with high unemployment is a real-life example.

• Yet another factor is the reduction in the mix of better-paying, goods-producing jobs.

Today, we have a "recovery" with high unemployment and, of the people working, we have a higher mix of lower-paying jobs than we would have if we had retained more of our basic, goods-producing industries.

In other words, the car-price/wage ratio is further hurt by the reduction of the productive, higher-paying jobs inherent in import-impacted industries.

Next, look at the price increases for imported cars. They increase at roughly the same rate as the increases on domestic cars. Obviously, all car prices have increased and all buyers pay more for cars.

Also, imports went up at the same rate as domestics prior to the unit limitation. The limitation has had no short-term effect on basic pricing policies of either the domestics or the importers. (A separate paper is available on that subject.)

This point — the importers raising prices at the same rate as domestics both before and during the unit limitation — is the factor that runs counter to all of the economic theories.

To put it bluntly, the importers don't react to economic theory, they react to profits. And they make profits by cutting domestic volumes, raising domestic prices and then matching the domestic price.

Another point — yes, it is true that competition has forced the domestic manufacturers to be even more efficient. Yet the higher volumes of the early 1970s gave buyers more car for less hours of wages. The increased efficiencies have not totally offset the loss of volume.

And finally, yes, the domestic auto industry, manufacturers and major suppliers, earned a 4 percent return on sales in 1983. But they lost much in the preceding years. There really isn't much room for lowering prices to test the market for additional marginal buyers.

In summary, it is known and agreed that lower volumes equal higher costs per unit. It is known and agreed that imports raise their prices at approximately the same rate as domestics. It is a fact that car prices have increased relative to wages since 1973, when imports began to seriously cut domestic volumes.

Yet everyone "knows" that imported cars are beneficial as they keep prices down. Their "knowledge" runs counter to both logic and fact, as both indicate that imports have increased the price of all cars in the U. S.

	Transaction Price, All Cars	Weeks Earnings To Buy Car	Import Share of Market (Pct.)
1970	$3,510	29.3	15.2
1971	3,709	29.1	15.4
1972	3,818	27.9	14.8
1973	3,877	26.7	15.4
1974	4,156	26.9	16.0

Computer firm helps dealers figure replacement costs

NEW YORK. — Cost Information Systems has added capability for property appraisals of automobile dealerships.

Universal Underwriters Group integrated a computer-based property assessment system, developed by Cost Information Systems, into its building appraisal operation. The computer figuratively rebuilds each individual dealership building from the ground up in order to calculate replacement construction costs.

The result — according to Cost Information Systems, which is a division of McGraw-Hill Information Systems Co. — is an accurate replacement cost estimate that reflects each structure's special characteristics, as well as the prevailing construction labor rates and materials' costs of the community in which it is located.

Cost Information Systems said that it worked closely with Universal Underwriters to customize its replacement cost system to meet the special requirements of auto and heavy-equipment dealerships.

A detailed evaluation form is completed on-site by the insurance firm's agents. Completed forms, which provide a thorough structural profile, are sent to the firm's regional offices, where computer operators key in the data on terminals.

The Information is transmitted to Cost Information Systems, which generates a replacement cost estimate using its database of current costs for 12,000 construction components and labor rates for 22 trades in 620 zip code areas nationwide.

The estimates are then transmitted electronically to Universal Underwriters. The entire cycle takes as little as 48 hours.

Colorado court upholds license suspension

DENVER. — The Colorado Court of Appeals has upheld a license suspension ordered by the Colorado Motor Vehicle Dealer Licensing Board against Hayden Bros. Auto Sales, Sheridan, a used-car dealership owned by Bobby G. Hayden.

The Board ordered the dealership closed for 14 business days in May, 1980, after a hearing in which the dealer was found guilty of failing to deliver the title to a vehicle which it sold and employing an unlicensed salesman. Hayden appealed and the order was stayed during the appeal process.

U. S. cars up 22 pct. for March; imports slip

Month's registrations post solid gain

Continued from Page 1

cent, to 196,802 from 205,643 last year.

Total new-car registrations were 724,911 in March of 1983 and 782,327 in February of this year.

For the month, General Motors and Ford Motor Co. increased their portions of the market as American Motors and Chrysler joined the imports as losers. GM gained 4.30 percentage points and Ford was up 2.35 percentage points. AMC dropped 0.76 percentage points, Chrysler was down 1.31 percentage points, imports lost 4.57 percentage points and miscellaneous domestics disappeared to 0.00 percent from 0.01 percent.

• Of the individual domestic makes, Chevrolet made the most impressive gain in March, up 3.33 percentage points, to 16.84 percent from 13.51 percent of the total market last year.

GM's share of the domestics-only total was 60.97 percent this year, up from 58.85 percent in 1983. Ford climbed to 24.52 percent from 22.80 percent. Chrysler was squeezed back to 12.03 percent from 14.62 percent and AMC slipped to 2.48 percent from 3.72 percent. Miscellaneous domestics no longer held a piece of the market dropping to 0.00 percent from 0.01 percent.

The market-class breakout left intermediates with the largest segment, 27.18 percent. Imports were second with 23.80 percent, followed by compacts at 17.80 percent, subcompacts at 13.34 percent, standards at 10.57 percent and luxury models at 7.31 percent.

A year earlier, intermediates represented 25.12 percent, imports had 28.37 percent, compacts had 15.94 percent, subcompacts had 11.58 percent, standards had 13.83 percent and luxury cars had 5.16 percent of the total.

• Registrations for the first three months of 1984 were up 25.20 percent compared with the 1983 total, and up 40.71 percent from 1982. The corresponding figures were: 2,364,869 in 1984; 1,888,868 in 1983, and 1,680,629 in 1982.

Imports were up in the numbers but down in penetration in the first quarter. Their first-quarter total this year was 588,130 (24.87 percent of the market), up 5.44 percent from 557,780 (29.53 percent of the market) the first quarter of 1983.

Domestic registrations were up 33.48 percent, to 1,776,739 from 1,331,088. Two years ago the domestic total was 1,182,356.

For the quarter, GM and Ford showed strength and the competition faded. GM gained 3.13 percentage points and Ford was up 2.31 percentage points. Imports dropped 4.66 percentage points, Chrysler was down 0.14 percentage points, AMC was off 0.63 percentage points and miscellaneous domestics were erased.

Excluding imports, GM captured 59.86 percent of the first-quarter, 1984 market, up from 59.37 percent a year earlier. Ford climbed to 25.27 percent from 23.66 percent. Chrysler dropped to 12.23 percent from 13.24 percent. American Motors likewise fell, to 2.64 percent from 3.71 percent, and miscellaneous domestics had no share, down from 0.02 percentage points.

Increased staffs are reported for Ford dealerships

DETROIT. — Employment at Ford Motor Co.'s 5,600 dealerships across the U.S. has increased by 10 percent from year-ago levels, a company official said.

Dealership employment at the end of the first quarter was 171,962, compared with 156,230 in the corresponding period of 1983, according to Philip E. Benton Jr., vice-president, Sales Operations.

"The most significant employment increase was recorded in dealership new-vehicle sales staffs, which grew 15 percent from 35,212 a year ago to 40,640 currently," he said.

Employment changes in other dealership job categories during the period were as follows: Used-vehicle sales, 20,733, up 13 percent; parts sales, 19,164, up 6 percent; service, 67,783, up 9 percent, and administrative/clerical, 23,642, up 7 percent.

In some Galants, Starions

Mitsubishi introduces 3-valve engine

By John Hartley
Staff Correspondent

TOKYO. — Intent on gaining some ground in the specialty-car market, Mitsubishi has introduced a novel three-valve engine design.

The engines are being fitted in some versions of the Galant front-drive sedan and the Starion coupe.

There are two inlet and one exhaust valves per cylinder, but at low speeds only one inlet is opened. At high speeds, both are operated and in this way Mitsubishi claims performance at all speeds is improved.

Based on the 2-liter Sirius engine, the new Sirius Dash unit is available in turbo form only. The 12 valves are all operated from a single overhead camshaft via rockers, as on the new range of Honda engines and the combustion chamber is part spherical.

To obtain this dual mode of operation, an unusual form of valve actuation is used. The primary inlet valve is operated in the normal way, so that it is opened and closed at all speeds.

However, the rocker for the secondary valve incorporates a device to allow the valve to remain inoperative at low engine speeds. In fact, this is the same mechanism that is used by Mitsubishi on the modulated-displacement engine fitted to the small Lancer sedan.

In normal circumstances, the secondary valve comes into operation at speeds over 2,500 RPM. At lower speeds, only the small primary inlet valve is opened — it is 1.14 inches in diameter—so the mixture enters the cylinder in a highly turbulent fashion.

To give good breathing at high speeds, the secondary valve is 1.46 inches in diameter.

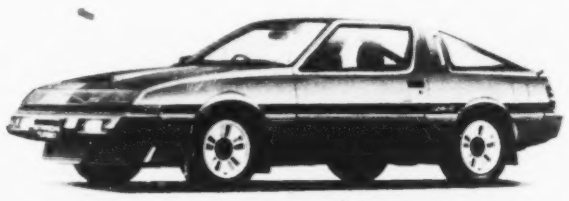
The Sirius Dash is a fuel-injection engine, but it is unusual in that there are two injectors spraying fuel into the intake manifold. With the new system, only one of the injectors operates below 2,500 RPM, so the fuel flow can be more easily balanced to the air flow.

There is also a two-stage wastegate control for the TC-05 turbocharger so maximum boost is available at all times.

With these modifications, Mitsubishi has been able to increase the power output of the Sirius engine. Torque is increased from 180 pounds-feet at 2,500 RPM to 205 pounds-feet at the same speed, so the car should accelerate very rapidly.

Because this engine is expensive, the concept is applied to the turbocharged version only and it is to be offered in only one Galant and one Starion model.

Mitsubishi aims to sell only 300 units in Japan monthly and has no plans to export it.



Three-valve engine for Starion, Galant

Some Mitsubishi Starion coupes (above) and Galant front-drive sedans are being fitted with a novel three-valve engine. There are two inlet and one exhaust valves per cylinder.

96.1 percent of Interstate System is open

WASHINGTON. — Federal Highway Administrator Ray A. Barnhart announced that 96.1 percent of the nation's Interstate Highway System is open to traffic.

Barnhart said that 40,835 miles of the 42,500-mile system have been brought into service. Included in the total are 83 miles that were put into service during 1983.

He added that various improvements are still required on some portions of the open Interstate System. These improvements range from the construction of additional lanes and control of access to the posting of signs along roadsides and other final phases of construction.

"Construction is under way on 579 new miles of Interstate highways," Barnhart said. "Engineering or right-of-way acquisition prior to actual highway construction is in progress on an additional 865 miles."

In addition, route location approval is pending on 64 miles for which public hearings have been held, while 157 miles have not yet advanced to the public hearing stage.

When completed, the Interstate System will consist of 32,730 miles of rural and 9,770 miles of urban highways, for a total of 42,500 miles. Currently, 31,756 miles, or 97 percent of the rural mileage and 9,075 miles, or 92.9 percent of the urban mileage, are open to traffic.

May new-car sales best since '79

Continued from Page 2

year-ago total with 12,366 last month compared with 3,288 a year earlier.

There were 26 selling days this May compared with 25 in 1983. On a daily-rate basis, sales for the month were up 22.59 percent to 30,895 from 25,202.

GM moved up to 61.46 percent from 60.10 percent of the domestic market last year, and Ford was up to 22.16 percent from 21.73 percent. Chrysler lost ground, down to 11.81 percent from 13.40 percent, AMC dropped to 1.88 percent from 2.90 percent and VW slipped to 1.15 percent from 1.35 percent. Honda grew to 1.54 percent from 0.52 percent in 1983.

Two domestic makes — Buick and Oldsmobile—reported best-ever sales in May, setting records not only for the month but for any month in their sales histories.

Several imports also announced record sales in May, including top-seller Toyota, Volvo, Mercedes-Benz and Audi. Saab had its best May and strung its line of consecutive record months to 26. BMW reported an any-month record of 7,457 sales in May.

Imports dropped to 23.26 percent of the market in May from 24.69 percent last year. They were up from the unusually low 19.47 percent earned in April, 1984.

Market segments for the total market, May, 1984, were as follows: Intermediates at 26.62 percent, compacts at 18.62 percent, subcompacts at 13.28 percent, standards at 10.74 percent, luxuries at 7.48 percent and imports at 23.26 percent.

Excluding imports, the market was made up of intermediates at 34.69 percent, compacts at 24.27 percent, subcompacts at 17.30 percent, standards at 14.00 percent and luxury models at 9.74 percent.

Third-period domestic sales were up 33.82 percent, to 338,236 from 252,748 a year ago, highest for that period since 353,408 in 1978. GM passenger-car sales of 205,314 were record-setting and also were the best for any 10-day period in more than three years.

Along with GM's 34.21-percent increase was a 35.17-percent sales climb for Ford, a 22.18-percent jump for Chrysler and a 42.93-percent gain for VW. AMC dipped 9.05 percent while Honda multiplied its year-ago sales by six.

Where auto market was in May

	Total Sales	Pct. of Total

Glimmer of hope seen in German auto strike

Continued from Page 8

costs and reduce competitiveness, therby jeopardizing job projects over the longer term.

However, an offer by the Baden-Wurttemberg employers of a two-stage reduction for line workers to 38 hours was quickly rejected by the union. The employers said it would create 23 percent more jobs: The union said it would add only 14 percent.

• Focal points for the strike actions are in the states of Baden-Wurttemberg (where Bosch and other suppliers are located) and Hesse (Adam Opel and other component makers). The action by some 25,000 of IG Metall's 2.6 million members has resulted in about 350,000 workers paid off or locked out in companies across the country.

The longer-term effects of the strike are being watched closely by other parties outside the Federal Republic. Trade unionists have agreed to press toward a Euroean-wide acceptance of the 35-hour week, so the events are being monitored by IG Metall's opposite numbers in France, Italy and the UK — and by the UAW in the U.S.

The terms of the settlement will set the tone for demands in other industrialized countries.

SERVICE INDEX 115.1*

	April, '84 vs. April, '83	4 mos., '84 vs. 4 mos., '83
Gross Profit on All Labor and P&A Sales	+16.8%	+18.9%
Repair Orders Written	+ 6.3%	+10.3%
Total Labor Sales (Customer & Warranty)	+15.4%	+17.4%
Shop Parts Sales (Customer & Warranty)	+21.4%	+24.1%
Sales of All Parts and P&A	+17.9%	+22.5%

*—Survey by Automotive News shows that dealers' service and parts business in April, 1984, was 115.1 percent of business in April, 1983. Service business in the four months of 1984 was 118.6 percent of business in the corresponding period in 1983.

Service Index advances again

Continued from Page 1

Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealers.

For the four-month period of 1984, service and parts business in dealerships was 118.6 percent of the volume for the same period of 1983.

Shop parts sales escalated 24.1 percent during the period, while sales of parts and accessories were up 23.1 percent, and gross profit climbed 18.9 percent.

Labor sales increased 17.4 percent for the January-April period, while repair orders written jumped 10.3 percent.

Automotive News World Outlook shows

Next decade to bring tougher sales fight

Continued from Page 1

—have enjoyed unprecedented gains in the U.S. market lately, in sales volume and in profits because of the strong dollar against European currencies.

The U.S. has become an important part of the European auto makers' marketing schemes and, as the economies of many European nations stagnate, it will become increasingly more vital, Lawson said.

The recovery already has waned in many European nations, and automotive sales have peaked.

• Germany's car market has stalled because of uncertainty over exhaust pollutant legislation to go into effect in 1986. Potential car buyers have held off on purchases pending the outcome of that legislation.

German auto makers, particularly BMW, Daimler-Benz and Audi, expect their main growth this year to continue to be in the U.S., DRI said.

France, too, is experiencing political and economic turmoil, and its domestic-car market is expected to turn downward for the next few years.

Britain's market remains questionable, and only Italy will continue to recover and grow, according to DRI.

The result will be that European auto makers, searching for sales and profit growth, will turn to the U.S., Lawson said. Nearly all plan model-line expansions and production increases targeted at the U.S. market.

Volvo, for example, has expanded its 700 series. Audi, following its split from Porsche, will try to double its U.S. sales. Daimler-Benz already has introduced its new 190 model and has a high-performance variation on the way. Saab soon will add to its lineup. Renault, despite statements to the contrary, probably will export its R-25 model to the U.S. Peugeot and Alfa Romeo also are planning to introduce new U.S. models.

"(The European auto makers) are continuing to be very aggressive and pushing hard in the U.S., but that push is coming out of a fixed pie. It's not riding a crest of growth in the U.S. market," Hammond said.

He added that all this attention to the U.S. is apt to trigger increased pressure to require some kind of legislative restraint such as a domestic content car and, again, the Japanese auto companies will be ahead of the pack.

"By the time (the European auto makers) really get cranked up to substantially increase their production, they'll be running right into this buzzsaw, that is, the protectionism problem," Hammond said.

• Nevertheless, the protectionism problem will not be an easy one to solve as joint ventures among auto makers proliferate.

"For example, Hammond said, "if Ford and Mazda produce jointly a car in Mexico and bring it to the U.S., do you treat that car as Japanese or Mexican, where you might give it favorable treatment as we do with the Canadians? Or are they Ford cars, in which case they're really coming from domestic manufacturers?"

A less ominous threat to U.S. car manufacturers, Lawson said, is automobiles built in Third World countries, many of which have ambitious production plans that can be met by only exporting to the developed world. However, those countries will have difficulty winning more than a toehold in developed nations.

Meanwhile, U.S. car makers will not sit still. They will continue to pump profits into productivity improvement to better compete against Japanese producers.

Hammond said it may take even more dramatic moves to fight the high-performance, high-ticket European competition, such as a move similar to Ford Motor Co.'s in importing a luxury car—the Merkur—from its European subsidiary under a new nameplate.

"And, you have to believe that some of these rumblings about diversification is predicated, in part, on what may be an inability to expand operations in the future, at least the traditional car operations," he noted.

At the same time, U.S. auto makers, and many of the world's car companies, will look for expanding markets. Though Europe and the U.S. make up two-thirds of the world's automobile consumption, growth in the mature industrialized world will be rather slow. Growth rates over the decade in the developed world will range from 11 to 21 percent.

Worldwide sales will be more than 36 million by the end of the decade, or more than 10 percent above the peak year of 1978, DRI said. This year's level will hit 31 million, just ahead of 1979's total.

"The majority of sales will be in the industrialized nations. The question is how quickly can they make those sales grow," said Hammond. "And the answer is probably not all that fast."

Third World countries will experience the most significant growth in the next decade, DRI said. The economies of Asia and the Pacific, Latin America and parts of Africa and the Middle East will grow at rates of 6 to 7 percent annually.

But, again, the Japanese will have a headstart, in part, because of their proximity to some of the leading Third World nations.

Undercover agents talked of heroin deal for DeLorean

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Cross-examination of the government informant in the DeLorean drug trafficking case here continued last week with the revelation that undercover agents considered using heroin in the drug deal that netted the former auto maker.

James Timothy Hoffman told the court that FBI and DEA agents considered using Hoffman's contacts in Thailand to arrange a heroin buy to become a part of the sting operation.

However, Hoffman said the idea was abandoned when it was decided that the heroin would be difficult and time-consuming to get.

Under questioning by DeLorean's attorney, Howard Weitzman, Hoffman said there was talk "about the possibility of actually taking the $2 million Mr. DeLorean said he was going to come up with" and move the investigation to include "a very large heroin source out of Thailand.

• One of the factors that led to the cancellation of the plan was that Hoffman was afraid that he might be arrested if returned to Thailand—turned over by former drug associates who may have become informants.

The key witness in the government's case continued to stick to his testimony that the former auto maker suggested the drug deal to save the ailing DeLorean Motor Co.

Nissan plant fully flexible

Continued from Page 3

ing significant savings of time and money.

4. The system can easily be adjusted to accommodate fluctuations in production volume.

The FMS line was introduced at Industrias NIPOMEX del Centro, S.A. de C.V., a Nissan joint venture company in Mexico that produces transaxles for Nissan Mexicana, S.A. de C.V., a wholly owned subsidiary of Nissan.

Nissan plans to introduce similar FMS lines for engine parts production in other overseas production facilities.

Chrysler gives a P-car peek; bonuses are OK'd

Continued from Page 2

jectives and make Chrysler even stronger, we've got to be competitive and reward them."

As for union representation on Chrysler's board of directors, Iacocca said discussions have been held and a decision must be made in the next few months. Former UAW President Douglas Fraser's term ended the day of the annual meeting.

Iacocca also served up a special treat to shareholders—a nickel boost in the quarterly dividend.

Iacocca announced the auto maker's board increased the dividend to 20 cents a share. The dividend is payable July 16 to shareholders of record on June 18.

• Iacocca said Chrysler will spend $65 million this year on common dividend payouts.

He called the dividend increase more evidence that Chrysler's turnaround "is complete—something for the history books."

Following the meeting, which lasted an hour and 50 minutes, Chrysler shareholders were invited to Chrysler's 20,000-square-foot pavilion at the nearby World's Fair and Exposition, where Iacocca unveiled Chrysler's new H-cars, the Dodge Lancer and Chrysler LeBaron GTS. They go on sale in January. Chrysler hopes for 100,000 sales per year of the new model.

'84 Cadillacs "S-t-r-e-t-c-h-e-d" Limos
☆ *Also '84 Lincoln Limos*

"AMERICAN CUSTOM COACHWORKS, LTD."
"IMMEDIATE DELIVERY" ☆ $29,900 ☆ "IMMEDIATE DELIVERY"

"Four" new special styles and sizes that are the best value and quality that you can acquire. You may choose from cars in production for "immediate delivery" of approximately 50 units or you can place your order to build a custom limousine to your specifications with a variety of equipment. "We welcome your inquiry" . . . and your purchase of our products.

Renault's '83 loss of $189 million is same as in '82

NEW YORK. — Renault lost about the same amount in 1983 as it did in 1982, the French auto maker reported.

The company showed a loss of $189 million last year after losing $190 million the year before. Renault said 1983's loss was due mainly to research and development costs in high-technology areas. In addition, the company's Industrial Vehicles Division, which represents 13 percent of its business, ran a $263.9 million loss.

Renault's Auto Division, which accounted for 73 percent of the company's operations, showed a pre-tax profit of $80.8 million while the Financial Division made $88.3 million.

Renault's gross revenues, excluding sales from American Motors and Mack Trucks, Inc., in which Renault holds equity positions, totaled $13.2 billion in 1983, compared with $15.5 billion the year before.

At the same time, Renault reported it invested more than $1.3 billion in 1983 in new product development, new plants and modernization of existing facilities. That was a 24-percent increase over the previous year. Fifty-four percent was invested in France while the balance was spent overseas, mostly in North America.

With a record 2,072,193 vehicles produced worldwide in 1983, Renault said it climbed to the fifth spot among all automotive manufacturers and topped the competition in the European market for the fourth straight year.

Mazda chief lists guides for study on U.S. plant

NEW YORK.—Yoshiki Yamasaki, president of Mazda Motor Corp., said that efficiency and quality are the prime concerns guiding his company's study of the feasibility of establishing a manufacturing plant in the U. S.

"If this study convinces us that we can build products with the level of efficiency and quality we demand in the vehicles we build in Japan, we will not only be a marketer here, we will also be a manufacturer," said Yamasaki, while addressing a luncheon at the Japan Society of New York.

Yamasaki and other Mazda executives were here as part of the company's celebration of its corporate name change to Mazda Motor Corp. from Toyo Kogyo Co.

Yamasaki said that Mazda is moving into a new phase in its corporate history "with a new name and with the aim of strengthening our position as an international enterprise."

He said that just 10 years ago, Mazda had outstanding debts of $1.4 billion, or 65 percent of its total annual revenue. But, today, Yamasaki said, Mazda's debts have been reduced to $0.85 billion, or less than 15 percent of current annual revenue.

L-M deal adds AMC

SHAWNEE, Okla. — Shawnee Lincoln-Mercury owners have purchased property for a new facility to house current operations and a newly obtained AMC-Jeep-Renault franchise. Marion Davidson is the company's president; partners are Chris Teape and Fred Gipson.

GOLF TOURNAMENT DIRECTORS

Car and Truck Dealers across America have discovered a proven, low-cost way to get valuable publicity at a fraction of the cost with deals like this . . .

GRAND PRIZE: A NEW CAR
DEALER COST: $200

How? With Hole-in-One Prize Insurance. For as little as $200., the National Hole-In-One Association will insure a new car or truck offered as the prize for a hole-in-one shot during a golf tournament. If a player shoots an ace, he takes the car, we pay the dealer and the BIG PRIZE publicity makes the tournament a success for everyone.

Call today, for a no-obligation QUICK QUOTE and a copy of our FREE NEWSLETTER, *GOLF TOURNAMENT DIRECTOR*, full of helpful "how-to's" and examples of successful tournaments.

14 assembly plants work overtime

Week's car output up to 166,666

By Joe Wilssens
Staff Writer

Overtime at 14 assembly facilities last week helped return domestic auto production to normal levels following the Memorial Day shortened output of the previous week.

U. S. auto makers targeted completion of 166,666 units last week, 23.42 percent greater than the prior week's 134,276 and 11.26 percent better than the year-ago week's 148,945.

Year-to-date, 3,786,104 cars have been assembled, 31.05 percent above 2,889,032 finished during the same 1983 period.

Of last week's estimated output, General Motors accounted for 54.29 percent followed by Ford Motor Co., 22.61 percent, Chrysler Corp., 17.01 percent; American Motors, 2.88 percent; Honda, 1.80 percent, and Volkswagen of America, 1.41 percent.

GM led the overtime list with seven plants reporting Saturday (June 9) overtime. Extra hours were scheduled at the company's Detroit, Fairfax (Kans.), Flint (B and G lines), Janesville (Wis.), Lordstown (O.), Oklahoma City and Van Nuys (Calif.) facilities.

Ford scheduled Saturday overtime hours at its Atlanta and Wixom (Mich.) plants.

Chrysler Corp.'s Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 operated two daily 9-hour shifts as well as two 8-hour Saturday shifts last week. The company's Jefferson (Detroit) point worked two daily 8½-hour shifts.

This week, Chrysler will follow the same daily overtime plan.

Detroit-area emissions tests approved by state Senate

LANSING, — In an effort to fend off threatened federal economic sanctions, the Michigan Senate has approved legislation setting up a vehicle inspection and maintenance program in the Detroit metropolitan area.

The measure, which has been sent to the House, would require motorists in Wayne, Oakland and Macomb counties to arrange for testing of pollution control equipment on their vehicles. Owners would be charged an inspection fee of up to $10 and could pay as much as $50 for needed repairs.

Annual certification would be necessary before motorists could register their vehicles. Diesels, cars and trucks more than 10 years old, motorcycles and electric-powered vehicles would be exempt from the test.

The EPA has pushed for an emissions testing program because of the region's failure to comply with hydrocarbon and carbon monoxide standards contained in the U.S. Clean Air Act.

Unless a program is established soon, the federal agency has vowed to impose a ban on new factories emitting more than 100 tons of hydrocarbons annually. Southeast Michigan is also faced with the loss of unspecified highway construction funds and forfeiture of some air pollution planning grants.

A bill setting up a car emissions testing program was passed four years ago by state lawmakers, but administrative rules were never adopted. The Legislature's joint administrative rules committee is scheduled to revive consideration of the 1980 law as a possible way to bypass debate in the Michigan House on the new bill.

Under the recently-passed measure, inspection would be handled by a private firm subcontracting with garages in the area. The Michigan Department of State has estimated that 2.2 million cars would be inspected each year by about 2,000 certified repair shops in the metropolitan area.

Truck production hits 1984 peak with 67,605 units

Domestic truck manufacturers scheduled overtime hours at seven assembly plants last week to post their highest weekly production total for 1984.

U. S. truck makers slated assembly of 67,605 units last week, 27.84 percent higher than the previous week's holiday-abbreviated build of 52,882. Last week's tally is also 27.35 percent greater than the year-ago week's 53,085.

So far this year, the industry has completed 1,425,266 trucks, 42.84 percent above 997,826 finished at this time last year.

General Motors worked two Saturday (June 9) overtime shifts at its Janesville (Wis.), Lordstown (O.) and Pontiac plants No. 5 and 6. The company's Detroit facility worked one Saturday overtime shift.

Ford Motor Co.'s Louisville plant also worked Saturday.

This week, Chrysler Corp.'s Warren (Mich.) point is slated to work two 9-hour daily shifts.

Week's car output steady in Canada; 25,096 assembled

Canadian auto and truck production last week was little changed from the totals of the previous week.

Canadian makers slated completion of 25,096 cars last week, five units more than the prior week's 25,091 and 9.73 percent greater than the year-ago week's 22,871. Last week's estimated build was the highest weekly output recorded this year.

So far this year, the manufacturers have finished 518,375 autos, 10.43 percent better than the 469,423 assembled at this time last year.

Canadian truck manufacturers scheduled 16,706 trucks last week, down 1.19 percent from the previous week's 16,891 but 33.47 percent greater than the year-ago week's 12,517.

Year-to-date, 380,984 trucks have been built in Canada, 57.95 percent higher than 241,214 completed during the same 1983 period.

General Motors scheduled Saturday (June 9) overtime at all three of its Oshawa (Ont.) facilities last week. Plants No. 1 and No. 2 build Celebrity, Fontiac 6000 and Chevrolet cars while the truck plant assembles light-duty trucks for Chevrolet and GMC. All three plants worked 8-hour shifts.

Working two Saturday overtime shifts, Chrysler Corp. estimated production of 1,965 Dodge Caravans, 1,955 Plymouth Voyagers and 780 Mini Ram Vans at its Windsor (Ont.) plant last week bringing the year-to-date T-115 total to 98,961.

New-car stocks drop to 47 days, tightest in year

By Kathleen Hamilton
Assistant Managing Editor

Domestic new-car inventories declined for the fourth straight month, falling to a 47-day supply on June 1.

The last time stocks were so slim was 11 months earlier: Inventories stood at 47 days' supply on July 1, 1983.

General Motors accounted for

Table on Page 60.

much of last month's decline, both by increasing its selling rate and reducing the actual number of cars it had in stock.

Shortages were most acute among domestic intermediate-size cars, which stood at a 40-day supply level. It was the lowest days' supply level for that category in more than eight years: Intermediates last stood at 40 days' supply on April 1, 1976.

Altogether, there were 1,467,214 new domestic cars in inventory on June 1, 5 percent fewer than the month before when the inventory was 1,541,985 and the days' supply stood at 53.

It was the third consecutive month in which inventory totals declined and, as noted, the fourth month in a row that the days' supply dropped.

One year earlier, the days' supply also stood at 47, but the selling rate was slower then and there were only 1,194,510 cars in stock.

• Shortages among big cars worsened last month and spread downscale. Luxury cars, which stood at a 44-day supply May 1, fell to 42 days; standard-size cars, from 48 to 43; intermediates, from 48 to 40, and compacts, from 66 to 55.

Only the subcompact sector remained in heavy supply: 58 days' worth, compared with 59 one month earlier. The subcompact sales rate was up for the month, but not up as much as production.

GM was the only corporate auto maker to reduce its actual inventories, although Ford Motor Co., Chrysler Corp. and Volkswagen of America reduced their domestic days' supply levels by increasing their sales rates.

GM's stocks stood at 38 days June 1, compared with 47 days May 1. Ford's supply fell to 60 days from 61, Chrysler's to 64 days from 66 and VW's to 83 from 97.

American Motors' domestic-car supply rose to 97 from 87,

Import stocks at record low

By Kathleen Hamilton
Assistant Managing Editor

Inventories of imported cars fell to 23 days on June 1, the lowest days' supply level since AUTOMOTIVE NEWS began keeping tabs on import stockpiles in mid-1981.

The figure was down from a 32-day supply on May 1.

Results of the German metalworkers' strike began showing up a bit, but the biggest reason

Table on Page 59.

stockpiles slid to 213,780 was increased sales of both German and the Japanese makes.

The stock of Japanese cars was back down to 15 days' worth last month, after a month-long respite in which the supply had risen to 22 days. The supply level had swelled only briefly, after the new Japanese fiscal year started in April and quotas were eased.

But by June 1, inventories of

Brand-new Olds

Jim Dunne

Front-drive 88 for '86

When the new front-drive Oldsmobile 88 debuts as a 1986 model, it will share some front-end componentry—but not the notchback styling of the slightly larger FWD Olds 98. Like the new 98, the 88 will be built on a 111-inch wheelbase. Length will shrink from today's 218 inches to 192, and engine choices will be V-6 diesel or gasoline.

Passive-restraint fight heading for the wire

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — With less than a month to go before Transportation Secretary Elizabeth Dole makes what is hoped to be the final decision on the passive-restraint rule, proponents and opponents of the rule used their last chance to comment on the most recent alternatives.

All vacations have been canceled for those government officials in the air-bag/automatic belt / mandatory seat-belt-use-law loop at DOT — those who must at minimum read the mountain of documents.

Even a cursory look at the major passive-restraint participants reflects a hardening of positions, a rise in confrontational adjectives and an increase in the legal catch phrases that often herald litigation.

Moreover, in addition to the 17 alternatives already outlined by the government, new one's are raised with each supplemental filing. Thus, despite more than 15 years of consideration and two major court actions (both affirming test procedures and passive restraints, specifically air bags) there is virtually no agreement.

With only Ford Motor Co. and Daimler-Benz now having limited air-bag capacity and only Toyota and Volkswagen having passive-belt capability, delay would be inevitable even with a partial passive-restraint mandate.

Some agreement exists, however, in opposing any tie-in be-

Chrysler ships first K-cars from Mexico to U.S. dealers

TOLUCA, Mexico.—Chrysler de Mexico S.A. has begun exporting K-cars to the U. S.

The company has contracted to export to the U. S. 1,000 cars per month through August with exports continuing into the 1985-model year.

Chrysler de Mexico Director Jerome B. York said that the initial three-month shipments will bring in $20 million. He said that the firm also has negotiated for the export of 5,000 other cars this year to countries including Puerto Rico and Saudi Arabia.

York said that American buyers comparing his firm's K-car with U. S. counterparts will find the Mexican version of equal quality.

The company has negotiated total exports of $470 million so far this year, thus surpassing the forecast of its January announcement that foreign sales would amount to $430 million, York said. Most of those sales will be engines, plant officials said.

• Chrysler has negotiated exports of 230,000 four-cylinder engines; 130,000 six- and eight-cylinder engines; 159,000 engine supports; 512,000 condensers, and 1.5 million electrical components.

Chrysler de Mexico's expected $470-million export revenue is up substantially from the $292 million received from exports last year. Car exports last year were only 2,380 units.

The Chrysler concentration on exports is being achieved even though the Toluca plant is working at only 60 to 70 percent of capacity, with this due

High-output unit is companion to Saturn Project

GM works on new small engine

By Dan McCosh
Detroit Reporter

General Motors has begun work on an ultra lightweight, high-output small-engine program calculated to do for its engine development what the Saturn Project is expected to do for small cars, AUTOMOTIVE NEWS has learned.

The melodramatically code-named "Manhattan Project" (the same as the World War II project that resulted in the atomic bomb) is GM's first effort to design a new engine with a clean sheet of paper in more than a decade. Other recent programs mainly have been derived from existing engine blocks and tooling.

Confirming the existence of the program, but giving no details, GM Vice Chairman Howard H. Kehrl said, "It's still in the skunkworks stage."

No timetable for production has been set.

GM engineers recently set up shop at Pontiac's engineering complex, an indication that the project is under the auspices of the CPC Group (Chevrolet-Pontiac-Canada).

Pontiac itself has been anxious to develop a new engine in the 2-liter range to replace the 1.8-liter single-overhead-cam engine it currently imports from

GM, Daewoo sign $426 million pact

DETROIT. — General Motors and its Korean partner, Daewoo, last week signed an agreement to spend $426 million on a joint venture to produce a new, front-wheel-drive subcompact in Korea for the 1987 model year. GM said South Korea is the primary market for the new vehicle but that 50 percent of the 167,000 units scheduled for production could be exported. Pontiac will market the car in the U. S.

Westmoreland builds its last Rabbit

WESTMORELAND, Pa.—The last Rabbit came off the Volkswagen of America assembly line here Friday (June 15). The plant produced 894,527 Rabbits and pickups since opening April 10, 1978. The successor Golf is to go into production here Aug. 6, after a $400 million retooling.

Used-car sales climb, Hertz reports

NEW YORK.—After two years of declines, used-car sales rebounded in 1983 by 4.3 percent to 17.39 million units, according to a new Hertz Corp. study. Average purchase price climbed 2.7 percent to a record $4,902 and revenues of all used-car sales last year were a record $85.3 billion.

For fun in the sun

This small and curious vehicle, the Condesa (Countess), is made in Palma de Mallorca, Spain, based on a Citroen 2CV chassis. Thomas Wadstrom has turned out about 900 of the vehicles in two years and is planning to build a factory on the mainland near Valencia to boost output.

AMC to build plant in Canada for mid-size car to bow in '88

By Marjorie Sorge
Labor Editor

American Motors will build a new $764 million assembly plant in Brampton, Ont., to produce a new AMC/Renault mid-size car for the North American market in the 1988 model year, the company said. The figure is in Canadian dollars; the U.S. equivalent is about $587 million at current exchange rates.

The new front-wheel-drive intermediate-size car will be an entirely new offering designed by Renault with AMC input. It will not be the Renault R25, AMC said.

Renault of France owns about 46 percent of AMC under an agreement the parties entered into in 1978.

AMC/Renault hopes to sell more than 150,000 of the new cars in the North American market by 1990, which represents more than five times the current production of the AMC facility in Brampton. That plant builds 120 Eagles a day on one shift. It has a capacity to produce 240 to 250 vehicles a day.

The Canadian federal and Ontario provincial governments will invest up to $121 million (Canadian) in the facility on a 50-50 basis. It will be paid back through royalties on each new car sold.

• Under the plan, the Canadian governments will receive a one percent royalty on each car sold. The car is expected to cost about $10,000 Canadian or about $7,500 U.S. (at current exchange rates). In addition, a 0.5 percent royalty on annual sales up to 158,000 cars will go into an AMC reinvestment fund earmarked for its Canadian auto program for the next 10 years. The remainder of the investment is to be provided by AMC, Renault and loans from Canadian banks.

The new plant is expected to produce 1,800 jobs directly and another 4,200 in satellite parts facilities. The 1,200 workers at the current Brampton facility will maintain their jobs.

AMC is planning to introduce a just-in-time inventory program at the new facility and expects numerous suppliers to locate nearby.

The investment in Canada is geared toward improving Renault's and AMC's position in the North American market.

It will also allow Renault to continue to import its French-built cars into Canada duty free. Under the U.S.-Canada Auto Pact, companies entering into joint agreements with manufacturers already part of the pact can also bring in their vehicles duty free as long as the member is meeting all the program's requirements and the vehicles are sold at the member's dealerships.

Renault does a good business in Canada and doesn't pay a tariff, a source said. Without an AMC plant in Canada, the tariff would be levied and "Renault could no longer compete," the source said.

Renault sold 14,876 cars in Canada during the 1982 model year for 6.1 percent of the import market. It sold 13,398 in 1983 for 6.2 percent and 7,347 so far in the 1984 model year for 4.8 percent of the import

Chrysler's new P-car a larger subcompact

By Dan McCosh
Detroit Reporter

Chrysler Corp.'s 1986½ P-body replacement for the aging L-body Omni-Horizon will be a notchback-hatchback built on a 100-inch wheelbase, Chrysler sources say. It will be significantly larger than the 96.6-inch-wheelbase hatchback it replaces.

Although Chrysler calls it a "subcompact," it is almost identical in wheelbase to the current 100.1-inch K-body and will be distinguishable mainly because of its more aerodynamic styling and shorter overall body length.

Chrysler Chairman Lee A. Iacocca has confirmed the corporation's intention to go ahead with domestic production of a new subcompact.

Chrysler intends to move its new small car "upscale" in content as well as size, thus leaving plenty of room for Japanese-built imports to take over in the current L-body's economy position.

Chrysler planners say the P-car will likely become the lowest price and content car the corporation will build in the U.S.

A 1.8-liter Chrysler-build derivative of the current 2.2-liter 4-cylinder engine will be available for the P-car when it is launched.

The P-car also drops the "econobox" styling of the current L-body. The rear-end treatment will be similar to the 1985 Chrysler H-body or the new Saab 9000 -- a liftback designed to give the exterior appearance of a conventional notchback with a trunk.

The coupe-like appearance is seen as another distinguishing cue aimed at a sporty character -- leaving the 6-passenger "family" role to the K-body derivatives.

As its wheelbase distinctions become narrower, Chrysler intends to tie styling more closely to intended market niche in the future, with "aero" themes indicating a sporty character and the more boxy, formal look for conservative customers.

'Well, when I ran short of shortages . . .'

ST. LOUIS.—The owner of a large General Motors dealership jubilantly called his zone manager to announce record-breaking sales after earlier repeated complaints about shortages.

To which the factory man responded:

"How can you do this with no cars?"

New-car sales tumble; total falls to 186,762

By Jenny L. King
Staff Writer

New-car sales in early June did something they haven't done in nearly seven months: They failed to surpass the comparable year-ago total.

In a direct comparison, they were down 11.15 percent. On a daily-sales-rate basis, they missed the June 1-10, 1983, mark by 0.04 percent.

The last time domestic sales were down was Nov. 11-20, 1983.

DOMESTIC SALES

	June 1-10, 1984	June 1-10, 1983
Renault		
Alliance/Encore	2,650†	2,880†
AMC	600†	720†
AMERICAN MOTORS	3,250†	3,600†
Chrysler	7,383	6,607
Imperial		
Plymouth	6,618	7,580
Dodge	9,344	10,988
CHRYSLER CORP.	23,345	25,197
Ford	30,648	29,277
Mercury	11,907	13,919

Oldsmobile	35,338	33,235
Pontiac	14,729	11,439
GENERAL MOTORS	111,037	131,729
VOLKSWAGEN	831	2,093
HONDA	2,081	1,618
U.S. INDUSTRY TOTAL	186,762	210,188

† estimated

Sales for this year's June 1-10 period totaled 186,762, down from 210,188 a year ago. The daily-sales rate of 23,345 from eight days this year just missed the 23,354 average from 1983. It was the lowest daily rate for a period since mid-January this year.

General Motors, which may have robbed Peter to pay Paul as it reported record sales for both cars and trucks in late May, came up short in June, down 15.71 percent to 111,037 from 131,729 a year ago. On a daily-rate basis, GM sales were off 5.17 percent.

Ford Motor Co. came out ahead either way the percentages were figured. Ford sales of 46,218 were up 0.58 percent from 45,951 (up 13.14 percent daily rate). Chrysler Corp. was off 7.35 percent, to 23,345 from 25,197 (up 4.21 percent daily rate).

• Honda kept several steps ahead of its former sales, up 28.62 percent to 2,081 from 1,618 (up 44.44 percent daily rate). American Motors was down 9.72 percent, to 3,250 from 3,600 (up 1.50 percent daily rate), and Volkswagen plunged 60.30 percent, to 831 from 2,093 (down 55.36 percent daily rate).

GM's sales drop cost it three percentage points in market share as the giant slipped to 59.45 percent from 62.67 percent. Ford picked up three, earning 24.75 percent this year compared with 21.86 percent a year earlier.

Chrysler edged up to 12.50 percent from 11.99 percent; AMC claimed 1.74 percent compared with 1.71 percent; Honda had 1.12 percent, up from 0.77 percent, and VW dropped to 0.44 percent from 1.00 percent.

Only five domestic makes showed sales increases for June 1-10. Chrysler was up 11.75 percent from last year, Ford was up 4.68 percent, Lincoln was up 32.96 percent, Oldsmobile was up 6.33 percent and Pontiac was up 28.76 percent.

Plymouth was down 12.69 percent, Dodge was down 14.96 percent and Mercury was down 14.46 percent. Buick dropped 35.67 percent, Cadillac was down 25.46 percent, Chevrolet was down 26.76 percent. AMC was down an estimated 16.67 percent and Renault dropped an estimated 7.99 percent.

Domestic sales through June 10 were up 23.79 percent, to 3,705,462 from 2,877,065.

Mid-engine turbo due in 1987

DeTomaso to produce sports car for Chrysler

By Dan McCosh
Detroit Reporter

Chrysler Corp.'s 5 percent investment in Italy's Officine Alfieri Maserati S.p.A., the specialty sports-car manufacturer run by Alejandro De Tomaso, firms up Chrysler's agreement with De Tomaso to build a mid-engine sports car, due in the U.S. in 1987.

The deal, concluded last week, strengthens Chrysler's control over the project, according to sources close to the program, and some key Chrysler executives have been ordered to Italy to live with the car for its two-year development period.

Wrangling over project control had been one of the key factors holding up the program, insiders say.

The De Tomaso project has been in negotiation for several years at Chrysler. In fact, it resulted at one point in a front-drive prototype being built, later a mid-engine car.

The car will be a high-priced, steel-bodied, mid-engine car built by De Tomaso at his plant in Modena, Italy. Earlier prototypes featured a fiberglass body, but that concept has been rejected, say Chrysler sources familiar with the car.

A 4-cylinder, advanced-design turbocharged powerplant based on a production Chrysler engine currently is the main powerplant being considered.

The ability of the mid-engine concept to handle high horsepower, compared with front-drive, was the main reason for selecting the configuration, which severely limits the passenger seating.

Maserati is a subsidiary of DeTomaso Industries S.p.A. which reported a 1983 loss of $16.2 million on sales of $153.03 million.

De Tomaso is another former Ford affiliate recruited to Chrysler by Chairman Lee A. Iacocca. He developed the Pantera, which was sold through Lincoln-Mercury dealers in the early 1970s, and has been working with Chrysler on a consulting basis.

Chrysler's De Tomaso connection follows on the heels of Cadillac's deal with Pininfarina Industrie S.p.A. to build a similar car.

Ford Motor Co. also is talking with a variety of overseas specialty car manufacturers about a similar project. General Motors also recently made an effort — since rejected — to buy an interest in the United Kingdom's Jaguar Cars, Ltd.

With volume projections in the 20,000-car annually range, the prestige value of such projects overwhelms the profit potential.

However, they have been leading to significant engineering tieups with some of Europe's top designers, as well as opening the U.S. market to Europe's long-excluded custom coachmakers.

DeLorean case sifts an issue of phone calls

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES.—Defense attorneys in the DeLorean drug trafficking case here unsuccessfully tried to make an issue of when the prosecution learned of unrecorded calls between the former auto maker and the government's informant in the case.

Under cross-examination, James Timothy Hoffman, the chief witness against DeLorean, admitted telling the grand jury that he recorded all contacts with John Z. DeLorean. Upon later review of his toll records, he told the prosecution that he didn't record all the calls.

Defense Attorneys Howard Weitzman and Donald Re jumped on the admission and said the defense wasn't informed of the unrecorded calls until just before the trial started. They accused Assistant U.S. Attorney James P. Walsh Jr., the lead prosecutor, of a cover-up and indicated they might move for a mistrial or dismissal.

Judge Robert M. Takasugi preempted that challenge, ruling there would be no mistrial or dismissal after reading a report submitted by Walsh explaining the circumstances under which he learned of the unrecorded calls.

Takasugi said he was satisfied with the report and said "I see no misconduct on the part of Mr. Walsh."

• The dispute was just a part of many exchanges between the defense and prosecution that have grown more acrimonious as cross-examination of Hoffman dragged into its third week.

Weitzman finished his questioning of Hoffman last Wednesday and late last week the prosecution began re-direct questioning of its star witness to bolster its case and to clarify inconsistencies that emerged during cross-examination.

Although some inconsistencies surfaced during Hoffman's testimony, Weitzman was largely unsuccessful in getting the informant to trip up in his recollection of the events that led to DeLorean's arrest Oct. 19, 1982, on cocaine trafficking conspiracy charges.

Weitzman had hoped to discredit Hoffman. However, the witness for the most part has not been shaken in his contention that the former auto maker approached him with the idea of a drug deal to generate cash

Vintage Mercedes to be auctioned

This 1922 Mercedes Targa Florio Racer is one of 335 vintage automobiles from the Harrah's Automobile Collection which will be sold Sept. 29-30 at a no-reserve auction in Reno. Copies of the auction catalog will be available free in mid-July from Vehicle Auction, Harrah's, P.O. Box 10, Reno, Nev. 89504. The auction list includes seven Duesenbergs, a Cord and 39 Fords dating from 1907 to 1975.

Canada and Japan agree on new quota

By Richard Johnson
Staff Writer

The Canadian and Japanese governments have reached an agreement on a new quota system that will restrict Japanese auto makers to 18 percent of the Canadian passenger-car market through next March.

But while trimming market share, the arrangement permits an 8.5 percent hike in the number of Japanese units which can be sold in the growing Canadian market.

For the fiscal year which began April 1, the Japanese importers may bring at least 166,000 cars into Canada, compared with 153,000 allowed under the 1983-84 quota.

The new agreement also leaves room for a higher ceiling if the Canadian market continues to expand. If total new-car sales for the 1985 calendar year reach 943,000, the Japanese allocation could be pushed upward 11.4 percent to 170,400.

Should calendar year sales fall somewhere between 917,000 and 943,000, the allocation could be adjusted from a base of 166,000 to reflect an 18 percent share of the market. Sales of new passenger cars in Canada last year totaled 843,318.

"There is a safety valve built in," said John Kneale, of Canada's Ministry of Industry, Trade and Commerce in Ottawa. "The final figure could fall somewhere between 166,000 and 170,400."

• In announcing the agreement last week, Canadian Trade Minister Gerald Regan said domestic sales have increased approximately 18 percent since the last

Grand Prix racing could be affected by German strike

By Richard Feast
European Editor

FRANKFURT, West Germany. — The Grand Prix auto racing circus hits Detroit this weekend — with the effects of the West German metal workers' strike threatening future events on this year's circuit.

The strike, now entering its sixth week, has taken out practically the whole of West Germany's auto industry. The shortages of some key components are beginning to worry the Formula One teams, including the McLaren team which has set the pace in this year's championship series.

Today's Grand Prix front runners use turbocharged engines. Mahle, the German piston maker which is one of the strike's prime targets, makes pistons for every turbo team apart from Honda.

Turbo manufacturer KKK supplies units to McLaren-Porsche, Brabham-BMW, Ferrari, ATS and Shadows teams. The intense stresses placed on components like pistons and turbos result in a high rate of turnover.

A two-car Grand Prix team will arrive at a race with half of its supply of 16 engines. An engine is used in practice and another substituted for the race, after which each is stripped down by the manufacturer and rebuilt. Any suspect components are immediately replaced.

But with the strike showing no signs of ending, the teams are becoming concerned about being able to field cars for future races. Inevitably, the leading teams will receive preferential treatment.

The Bosch connection, which is the main problem at the manufacturing end in Germany, is less of a problem for the race teams. Its fuel injection and electronic engine management is used by many of the teams and is even re-programmed for each circuit, but it is subject to less wear and tear than pistons and turbos.

Talks in Stuttgart aimed at settling the strike last week broke down. There have been concessions from employers, but IG Metall's stance seems inflexible: It wants the 40-hour week reduced to 35 wtih no consequent cut in pay.

The prospect of some sort of third-party arbitration is now being raised, but this will require commitments toward compromise.

Ford's Saarlouis factory, located in the state of Saarland which is not directly affected, was the only one in the Federal Republic producing last week. It was building Escorts and Orions at its scheduled rate of around 1,200 daily. Ford had some work in progress at Cologne and Genk (Belgium), but otherwise the country's industry was shut down.

• The strike's effects were felt in another country last week, when 7,500 employes of Fiat's truck (Iveco) and construction equipment (Fiat Allis) companies around Turin were laid off. They were awaiting components from Iveco's Magirus-Deutz subsidiary in Germany.

In addition, other European auto makers buy components from Germany, particularly from Bosch. Its fuel injection equipment is seen on most upmarket models of Saab and Volvo and its Lambda-sond emission equipment is an essential

Oldsmobile eyes setting up an outside supplier

By Marjorie Sorge

LANSING.—The General Motors reorganization may be the catalyst which helps Oldsmobile set up a fiberglass supply business outside the corporation to sell the components to its competitors, according to Joseph J. Sanchez, Oldsmobile general manager.

"The restructuring (reorganization) removes the auto manufacturing operations from the division, making it only a marketing function," he told Automotive News.

"We produce fiberglass parts right here in Lansing. We build the fenders, doors and quarters for the Pontiac Fiero. We are looking at the Lansing production facilities as separate from Oldsmobile with the possibility of selling those parts to other competitors.

"Why can't we make doors, quarters and fenders if we have the technology and techniques and run it as a business outside the corporation? Those things are being studied now."

Sanchez also said Oldsmobile has been sending representatives around the world for the last six months checking into possible joint ventures for the division.

While he emphasized that the divisions cannot commit GM to a venture, he said it is up to the divisions to initiate the idea and do the legwork. "That is the thrust of the reorganization," he said.

Oldsmobile personnel have visited companies in Japan, Europe and Brazil, among others, he said.

• Sanchez also told Automotive News:

1. Oldsmobile will likely have a two-plus-two car by 1988 which will be exclusively designed and styled for the division by Oldsmobile. Output would be about 5,000 a month or 60,000 a year.

2. Oldsmobile will not lose any models but some of the option packages could be scrubbed as the division moves to streamline operations under the reorganization. It will not lose any representation in the various size and price classes.

3. The dealer discount will not change under the reorganization but dealers will have a greater challenge selling cars once the divisions begin to produce more exclusively designed vehicles.

"The impact (of the reorganization) will be felt three to five years from now as we develop more products and as we get a greater degree of differentiation," Sanchez said.

"The dealers will then have a greater challenge. They will have different models to sell. Today, you can move a car that belongs to three different divisions and is very similar and the best salesman sells the most. Tomorrow, if those cars are totally different, it may require different marketing approaches.

"So the dealers have to be more aggressive. It will be a challenge to the imagination and initiative of the dealer organization."

4. Oldsmobile will need more dealers especially in areas of rapid population growth such as Florida, California and the Southwest.

5. The Japanese will not be as strong competitors in the future as they are forced to

Continued on Page 32, Col. 3

New ideas at Olds

Oldsmobile may set up its own fiberglass company outside General Motors and is actively pursuing possible overseas joint ventures, according to Joseph J. Sanchez, Oldsmobile general manager. The division is also looking for a new two-plus-two car by the 1988 model year.

truck industry news

Totals top previous highs established in record 1978

May, five-month sales set marks

May sales of new trucks of all types in the U.S. were the highest for any month in industry history, and the five-month total also hit an alltime peak.

During the month, according to preliminary factory reports, franchised dealers and factory outlets retailed 404,543 vehicles, an increase of 48 percent over the year-ago 273,288 and 1.7 percent higher than the 397,921 units sold in May, 1978, the previous any-month peak.

Through May, the total of 1,730,755 sales was 45.9 percent higher than last year's 1,185,897 and also 1.7 percent greater than the previous five-month high of 1,701,949 set in 1978.

There were strong advances for both May and the January-May period in all three market segments, with the heavies showing the biggest percentage increases.

During the month, retail outlets sold 379,499 light trucks, a gain of 46.3 percent over last year's 259,413. Mediums were up 15.6 percent, 4,789 versus 4,142. Heavies soared 108.1 percent to 20,255 units, compared with 9,733 a year ago.

Five-month sales of light trucks were 45.9 percent higher than a year ago, from 1,114,027 units in 1983 to 1,625,902.

Through May, 22,397 medium vehicles were retailed, up 21.7 percent over the year-earlier 18,404 units. Heavies totaled 82,456, an increase of 54.2 percent over the 53,466 sold in the like period in 1983.

Among the light trucks, the biggest gains were scored by the compacts, both domestic and imported.

In May, dealers retailed 174,068 units, an increase of 82.8 percent over last year. The five-month total of 714,286 sales was 80.1 percent higher than the year-ago 396,546.

The small trucks accounted

IH increases power in its 6.9-liter diesel

CHICAGO. — A new, more powerful version of its 6.9-liter V-8 medium-duty diesel engine has been announced by International Harvester's Engine Division.

A 165-HP rating for the engine, certified for all 50 states, has been developed primarily for school-bus applications, according to John R. Horne, vice president, Engine and Foundry Division. It will be available on International Model 1753 S-Series school-bus chassis.

The original 155-HP version continues as the standard power plant for International Model 1654 S-Series trucks up to 28,000 pounds GVW.

Acording to Horne, the rapid acceptance of the 6.9-liter engine has been a significant factor in accelerating the transition from gasoline to diesel power among medium trucks and buses.

"We now estimate that nearly 90 percent of all International medium trucks and buses will be diesel by 1988, especially now that we are offering a 165-HP, 6.9-liter engine for school bus applications," he said.

• The naturally aspirated, 6.9-liter engine develops 165 HP at 3,000 RPM and 319 foot pounds of torque at 1,800 RPM. The 155-HP version develops 309 foot pounds of torque at 1,800 RPM. Compression ratio for both engines is 21.5:1.

"Since its introduction more than a year ago, we have continued to improve the 6.9-liter engine," Horne said. "One improvement was a design and materials change to the combustion chamber which resulted in a significant reduction — 2 dB(A)—in the engine's noise level.

"Another change in the nozzle-spray pattern improved combustion," he added.

Horne noted that the 6.9-liter engine used in International S-Series trucks is warranted for 100 percent coverage of parts and labor for the first 12 months or 25,000 miles.

An extended-warranty program covering mileage to 50,000 miles or 24 months, again with 100 percent coverage, also is available.

AMC introduces a full-size 4x4 Custom Wagoneer

SOUTHFIELD, Mich.—American Motors is expanding its 1984 line of full-size sports/utility vehicles by introducing the Jeep Custom Wagoneer.

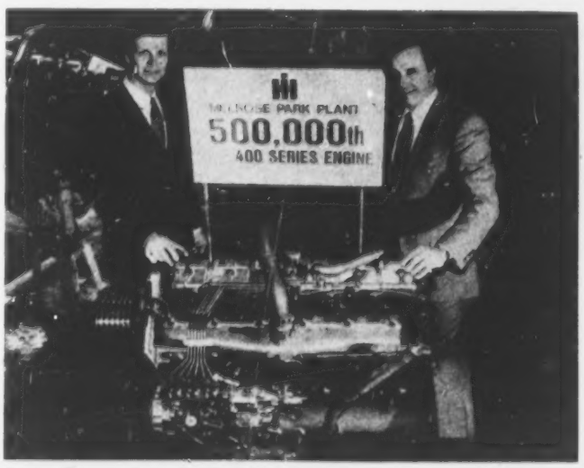
The new model, like the luxurious Grand Wagoneer, is a four-wheel-drive vehicle with a GVW rating of 6,200 pounds and a towing capacity of 5,000 pounds.

"The new Custom Wagoneer will offer buyers of full-size sports/utility vehicles a well-equipped vehicle for a base price of $15,995," said Joseph E. Cappy, group vice president — sales and marketing. "This is one of the few full-size utility vehicles with four doors and seating for six adults.

"The 4x4 market has expanded tremendously this year," he added. "While the major growth has been in the compact-vehicle segment, the full-size segment has also increased. The new Custom Wagoneer will offer our customers another option in this growing market segment."

The Custom Wagoneer is equipped with a six-cylinder engine and automatic transmission with part-time 4x4 system and free-wheeling front hubs. Other standard equipment includes air conditioning and tinted glass, AM/FM stereo with four speakers, bucket front seats with Almond Weschester fabric (a vinyl front bench seat is a credit option), visibility and light groups, full carpeting with extra-quiet insulation, power tailgate window, bodyside moldings, full wheel covers, woodgrain instrument panel and bright window and drip rail moldings.

Optional equipment includes a 360-CID V-8, heavy-duty suspension and two trailer-towing packages with capacities up to 5,000 pounds.



Milestone IH 400-Series diesel

International Harvester's Engine Division recently produced its 500,000th 400-Series diesel engine at Melrose Park, Ill., a DT-466C in-line six-cylinder turbocharged truck engine. With the engine are John Ullrich, right, Engine & Foundry Division manufacturing vice president, and Paul Roseland, plant manager.

Western Star's 'All Star'

A specially designed, limited-edition highway truck, the "All Star," marks the first year of Western Star Trucks in the U. S. market since the discontinuance of distribution of the heavy trucks by Volvo White Corp.

Special model marks Western Star's 'birth'

BELLEVUE, Wash.—Western Star Trucks is marking its first full year in the U.S. distribution of Western Star heavy trucks with the production of a limited-edition highway truck.

Called the "All Star," the truck is Western Star's base model, the 4964 6x4 with a 60-inch walk-in sleeper.

Each of the 100 units to be built will have a special serial number and a personalized buyer package, according to Richard M. Pattison, Western Star marketing manager.

He said all 100 units have been claimed by dealers and will be available this month or July.

"We wanted to turn out a limited edition that celebrated our first year in the U.S. market," Pattison said. "This truck offers all the options our customers want most—plus several special added attractions."

Western Star trucks, which now are produced only in Canada, previously were marketed in the U.S. by Volvo White Truck Corp.

The "All Star" has a red-burgundy-blue star design on an exterior silver background, and special gray and burgundy naugahyde upholstery.

"One important feature of the All Star," said Pattison, "is a mobile telephone that will enable truck operators to make all types of phone calls without having to leave the cab."

Component options include a Cummins NTC400 400-HP or

Ohio outlet had both trucks, farm equipment at the start

IH dealership looks back 40 years

WOOSTER, O.—Since its beginning in the days of World War II, Harold Cook, Inc., has been an integral part of the town of Wooster. The IH dealership is celebrating 40 years in the truck business this year.

"During the second World War, my father started the business with C. W. Sommer and Don Tanner, who already operated a dealership in Lodi, Ohio," said Roger Cook, son of the founder and now president and general manager of Harold Cook, Inc.

"My dad worked his way up in International's truck organization during the Great Depression from a floor sweeper at the old Cleveland retail branch to zone manager on the Cleveland district sales staff. He was in business with Sommer and Tanner for 25 years until he and I finally bought out their interest in the operation."

Originally known as Buckeye Truck & Implement Co., the dealership sold farm equipment, in addition to trucks, until the mid-1960s.

The business was renamed Harold Cook, Inc., in 1960 when the firm dropped the farm-equipment segment of the business and added cars. Roger Cook joined the dealership in 1962 as a truck salesman.

"I had been selling pharmaceuticals for Charles Pfizer Laboratories after earning a BA degree in pre-med from Ohio Wesleyan University," Cook said. "My dad wanted to diminish his role, but we both wanted to keep the business in the family."

Roger became president and general manager when his father died in 1970.

Today, Harold Cook, Inc., has 21 full-time employes and annual sales of approximately $3 million in trucks, parts and service. Cook's 25,000-square-foot facility is located on four acres along Old U.S. Route 30, said Roger, along which many IH dealerships had staked their roots over the past four or five decades.

"We are the oldest dealership in Wooster," said Cook.

The truck industry has changed over the last four decades, and today's economic conditions and fierce competition present IH dealers a great challenge to capture a respectable share of a tighter market.

"Our area has been particularly hard hit," Cook noted. "We are a rural and agricultural area, and in addition, the center of the oil and gas service and supply business. We're tied to these businesses, which have had some very lean times lately."

But Harold Cook, Inc., is constantly seeking ways to attract new business.

"We hold parts and service

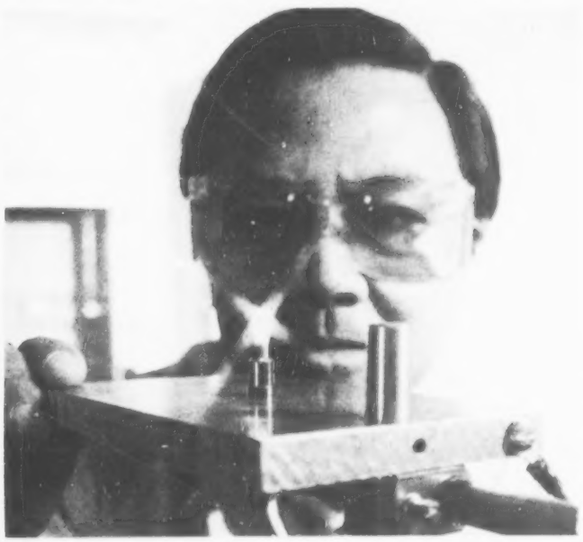
engineering



For glowing starts

Senior Staff Engineer C. T. Young at Allied Corp.'s Automotive Technical Center in Troy, Mich., checks a prototype glow plug with an optical pyrometer. The plug will go into a modified diesel engine for testing under simulated driving conditions.

Engineers go to Washington

Hot SAE sessions in the capital

By Roger Rowand
Engineering Editor

WASHINGTON. — After a year of preparation, the SAE held its first Government/Industry Meeting & Exposition here and the event received a generally satisfactory grade.

It was a first and some foot-wetting was evident, but the over-all reaction was favorable.

NHTSA Administrator Diane K. Steed said the meeting offered an excellent opportunity for constructive interchange between government officials and an industry they regulate. Conference-goers appeared to agree.

"This one was not as large as most SAE meetings and that gave us a chance to listen effectively. There were fewer parallel sessions so it was possible to attend what you wanted to more readily. We've had an interchange right along with the industry, but this was of value," said Philip W. Davis, chief of NHTSA's Crashworthiness Division.

Another comment on size came from an emissions specialist with Volkswagen of America: "This is smaller and a lot easier to handle than, say, the big meeting in Detroit early in the year."

On booth duty at the Digalog display, a salesman said, "We've had a few people, a handful, but they've been pretty good. We've been successful with it."

There were an estimated 700 in attendance here and there were about a dozen exhibitors. At the annual Congress & Exposition in Detroit, there were

Rowand report

By ROGER ROWAND

FBI tracking engineers

WASHINGTON. — You won't see any posters on the Post-office wall, but the FBI has a new person on its Most Wanted list.

The Federal Bureau of Investigation is looking for engineers it can hire as special agents and as non-agent technical specialists.

Why would any engineer leave, say, the auto industry to plunge into fighting terrorism, narcotics trafficking, crime and espionage?

Visit FBI headquarters here and sit down with Special Agent William A. Bayes, assistant director of the bureau's Technical Services Division. Listen as he describes the need and what a bureau job means.

"One important aspect is the challenge of making an immediate, near-term or long-term contribution to the country," he said.

Engineers do join the FBI for that patriotic reason. Bayes said it is part of a package of reasons that includes a wide variety of professional work, a chance to develop diverse skills, opportunity to offer research and development programs significant input and the prestige that goes with being with the FBI. Bayes said the quality of leadership in the agency also is an important reason for working there.

The salary alone isn't going to lure any engineers from Warren, Mich., or Kokomo, Ind., or Huntsville, Ala., or Detroit.

An agent's salary begins at $28,860 but annual earnings of $30,000 to $50,000 can be anticipated, Bayes said. An engineer heading a unit can make $60,000, he said.

Some technical personnel in the agency are special agents, others are not.

• Bayes said the feds are leaders in high technology. "We're state-of-the-art and beyond in technical support of our investigative efforts," he said.

His division soon will open an engineering R&D center at Quantico, Va., just outside Washington. That should be the most up-to-date facility of its kind in the world.

"We do most of our own engineering and the major effort now is in the electronics area," Bayes said.

Electronic surveillance is an important area for the FBI, of course. Voice privacy is another. With 17,000 VHF radios in the field, privacy is critical.

A new private radio system has just gone into use in Los Angeles, just in time for the Olympics. It's digitized and conversation is in crypto. The setup was developed by FBI engineers and technicians and equipment was purchased from Motorola.

"We are a service organization and our clients are the agents in the field," Bayes said. "The Los Angeles system is an example of serving a broad-scale project. We also do one-of-a-kind, customized components and devices and our own countermeasures."

Bayes, a physicist, is a computer science engineer today but has worked as an engineer in the space program.

"Our new facility is a plus," he said. "We've been contacting large companies and asking how they establish a work environment for engineers.

"But, this is more than a job. There is a great challenge and a great opportunity here to do well."

The FBI has about 20,000 employes and an annual budget of about $1 billion. Bayes calls its R&D program the most outstanding one in the government.

ENGINEERS Two paths await you for an interesting and challenging career with the FBI.

The Federal Bureau of Investigation offers Engineers an opportunity for employment as:

Engineers Technicians

Special Agents

The Federal Bureau of Investigation has immediate need for engineers and other technical professionals to develop and support the next generation of state-of-the-art technical investigative equipment and systems used in criminal and foreign counter intelligence investigations. These positions offer significant hands-on experience in concept formulation, requirements specifications, development, and deployment. The technical areas include: RF Systems, Digital Circuit Design, Signal Processing, Antenna Design, Computer Systems Architecture, Analog Circuit Design, and Integrated Circuit Design. Positions are available at the GS-7 through GS-14 levels depending upon qualifications. Positions are located in the Washington, D.C. area.

The FBI is in a unique position of having both criminal and counter intelligence responsibilities. These vastly different efforts require different ranges of technical equipment and allow the FBI to offer engineer positions in Research and Development or Operations Engineering.

Special Agent careers are available covering a wide variety of work assignments, special cases and locations. Salary begins at $28,860.00.

All applicants must be U.S. citizens and will be subjected to a background investigation. Special Agent applicants must be between the ages of 23 and 35 and meet physical requirements. The FBI is an equal opportunity employer.

27-year court battle ends

Inventor's team wins fight with GM

By Roger Rowand
Engineering Editor

OAK PARK, Ill. — In an era in which a lot of people can hardly contain themselves till the day's state lottery number is drawn, the ordeal of John Arthur Hendricks, 76, of this city, seems impossible to have endured.

Hendricks is an inventor who started a patent infringement battle against General Motors and other automotive giants back in 1956. The battle was won last year. That was when a U. S. Supreme Court decision was handed down and Hendricks received his share of a $20 million court-ordered payment from GM.

His cut amounted to around $700,000, but Uncle Sam snagged some $200,000 of that in taxes, he said.

Hendricks is a chipper individual not at all embittered by 27 years of legal maneuvering as he fought what he calls the world's richest corporation. He is bent up a bit by arthritis, however, and uses a cane.

His wife, Jeri, has worked as an activities, or occupational therapist and as an interior decorator through the years of legal entanglement. She also shows no signs of bitterness or anger.

"As you wait for these things, you deteriorate," she said. "If we'd gotten the money even 10 years ago, the dollar would have been worth much more and we would have been much more spry. But, we have a philosophy of life that anything that will be will be.

"We figured it would happen some day. We had a lot of faith and we lived as though it would happen," she said.

Hendricks said: "We never had any doubt. As soon as the patent was established, we won all the way up to the Supreme Court."

One thing the Hendrickses did abstain from in those years was the purchase of any Detroit-made car. They've owned a Citroen, two Mercedes, Volvos, a Saab, a BMW and once were tempted by a Facel Vega. Hendricks now owns a Mazda RX-7. Mrs. Hendricks drives a Chrysler LeBaron — loaded.

One of the surprising things about Hendricks and that $700,000 is the fact he sold the patent in question years ago.

The patent, issued in 1952, covers a die lubrication system widely used in cold forming auto bumpers. Suits were filed early on against all the U. S. bumper makers including Ford Motor Co., Chrysler Corp., Houdaille Industries and GM. All but GM settled. The settlement money, about $800,000 went to support the fight against GM, Hendricks said.

His patent covered an assembly line dry-film lubricant that is an instant-drying, melting, flowing barrier film that can be melted off with hot water. A die lubricant prevents binding, galling, tearing.

All those conditions which ruin sheet metal parts are related to heat at the work piece that is so high that metals weld spontaneously under pressures of as high as 2,000 tons per square inch as in the case of bumper stampings, he said.

It was developed on a shoestring in a Cleveland storefront lab. Its use saved $2 a bumper through the elimination of several steps in manufacturing and a good deal of labor.

The inventor, lacking a degree, calls himself a homemade chemist. His credentials, however, are impressive. He has been employed as a research chemist with such highly regarded outfits as duPont, Udylite and the University of Michigan where he enjoyed a faculty status.

One company fired him when

Continued on Page 38, Col. 3

In court 27 years

John A. Hendricks and wife Jeri endured 27 years of litigation after charging General Motors with patent infringement. Hendricks' team finally won, to the tune of $20 million.

world news briefs

Ludwigsen: On Bond Street.

Ludwigsen surfaces

Karl Ludwigsen, former vice president of Ford of Europe, establishes a "think tank" focused on the auto industry. Among projects currently being studied are sports car and luxury car markets, electric vehicle prospects, the effects of fuel costs on segmentation in world markets, strategies for productivity improvements and the impact of legislation on car design. Ludwigsen Associates is based on Bond Street, London.

M-B buys from Mitsubishi

Mercedes-Benz Espana will buy gasoline engines from Mitsubishi Motors Corp. starting next year. Volume of 6,000 a year is projected.

Reliant looks to exports

Reliant Motor, British specialist sports car and three-wheeler maker, is thinking seriously of exporting its forthcoming small sports car to the U.S. The car, powered by a Ford CVH engine and to cost around $10,000 in the UK, will debut at Birmingham's international auto show in October.

Ford stakes claim

To counter claims by other auto makers, Ford issues a list of what it says were last year's world best sellers. Ford figures, based on production, put Escort on top with 827,000. Next are Renault 9 (730,000), Toyota Corolla (705,000), VW Golf (611,000), Nissan Sunny (556,000), Ford F-series (538,000) and Renault 5 (434,000).

Sinclair declines Belfast

Sinclair Vehicles rejects a plan to build its forthcoming 1975 electric vehicles at the former DeLorean car factory in Belfast, Northern Ireland. The first vehicles will be made instead in South Wales.

Bedford CF revamp

General Motors' Bedford Commercial Vehicles launches a second generation CF medium-van line. Features include a 2-liter gas engine which replaces 1.8 and 2.3-liter units, new transmissions, front disc brakes, lower service costs and improved cab interior.

Lotus wins appeal

Group Lotus wins its appeal against the Inland Revenue's $120 million tax demand.

Praise for Fiat accounts

The European Federation of the Financial Analysts' Societies (EFFIS) declares that the 1982 consolidated financial statements of the Fiat Group contain the best corporate information in Europe.

Big bus order

Volvo Bus Corp. lands its largest order ever for articulated buses. The Greater Stockholm Transport Authority ordered 126, plus 80 two-axle buses.

Engineers go to Washington

Hot SAE sessions in the capital

Continued from Page 22

thousands in attendance and exhibits numbered in the hundreds.

In Michigan in January, the weather has a tendency to occupy center stage. The same was true here with the mercury pushing 90 degrees. The Mayflower Hotel's air conditioning was limping under a burden of extensive hotel remodeling. Some sessions in smaller hotel meeting rooms became uncomfortable.

Topics studied during the four days of talk in panel discussions, question-and-answer sessions and corridor conversations covered a wide range.

They included fuel economy, with emphasis on what should happen when CAFE rules expire, emissions, military vehicles and research, lobbying and consumer information.

NHTSA reps gave engineers a look at areas of interest likely to get heavy federal research attention in the months ahead.

Michael M. Finkelstein, NHTSA associate administrator for research and development, presented a look at how the money is spent.

NHTSA Motor Vehicle Research (in 000s)

Area	Fiscal year 1984	Fiscal year 1985 (Requested)
Crashworthiness	$8.239	$9.350
Crash avoidance	2.650	2.855
Heavy-duty	360	800
Air Bags	1.000	2.500

In addition, the National Center for Statistical Analysis gets about half of all NHTSA research funds.

EPA officials said their agency will be concentrating on control of heavy-duty truck emissions — diesel particulates and oxides of nitrogen — and the study of methanol as an additive and as a constituent in photochemical smog.

EPA will be taking an unaccustomed role when it develops heavy-duty emissions control technology, SAE was told. Normally, others develop control technology to meet EPA regulations.

There did not seem to be any trouble communicating among participants in the event on Connecticut Ave. but there was general agreement that the miles between Detroit and Washington are a drawback to smooth communications.

One of the best-attended sessions covered emission controls tampering and misfueling — using leaded gasoline in vehicles with catalytic converters.

Philip J. Lang, marketing advisor for Exxon Co., U.S.A., delivered some good news from the misfueling front. Exxon researchers are reporting a dip in the number of people misfueling.

In the first quarter of 1984, misfueling occurred at a rate of 6.8 percent, down from a rate of 8.4 percent a year earlier. Analysis indicates the drop was due largely to a higher mix of newer cars, Lang said.

Cars dating from 1975 to 1977 constitute 25 percent of the total U. S. car population now versus 32 percent a year ago. The three youngest model-year cars made up 36 percent of the total in this year's first quarter compared with 23 percent a year before, he said.

Government and petroleum industry researchers have an impressive amount of knowledge about the misfueler. He fits a pattern.

He is under 25, earns less than $25,000 a year, lives in the rural South or Southwest, and is a do-it-yourselfer. Some 80 percent of the misfuelers use self-service pumps and pay cash. Many drive pickups. They generally buy the leaded gas because it is priced lower than unleaded fuel.

Champion Spark Plug promotes Black to VP

TOLEDO.—Richard L. Black has been named Champion Spark Plug Co.'s vice president of research and development succeeding Richard C. Teasel, who is retiring after 35 years with the company.

Black, 36, began working for Champion's research and development department in 1969. Most recently, he served as director of international manufacturing. Teasel has been R&D vice president since 1968.

Rapid Transit System slates lawn show

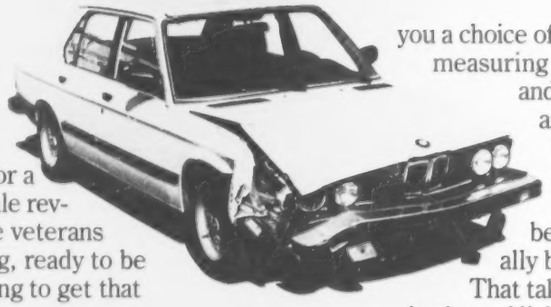
DEARBORN. — Rapid Transit System here is presenting the second annual Mopar Lawn Show July 8 at the Edsel and Eleanor Ford House, Grosse Pointe Shores, Mich.

Rapid Transit System is a nonprofit organization which restores Chrysler Corp. vehicles.

Dimmitt breaks ground

Larry H. Dimmitt Sr., president, Larry Dimmitt Cadillac, Inc., Clearwater, Fla., breaks ground for Larry Dimmitt BMW, Inc., Hudson, Fla. With Dimmitt are sons Lawrence, left, and Richard.

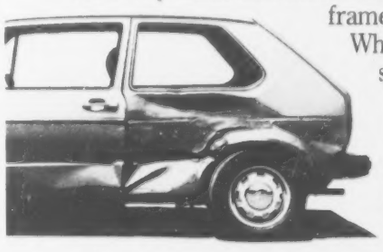
Think of them as income-ing wounded.



New car sales will have their ups and downs, but you can always count on one thing: Accidents will happen.

So if you're looking for a constant source of aftersale revenue, just look at all those veterans of collisions, limping along, ready to be repaired. Somebody's going to get that business. Why not you?

All it takes is one wise investment in a repair system that can handle all unibodies, for every make and model. And take care of frame chassis, too.



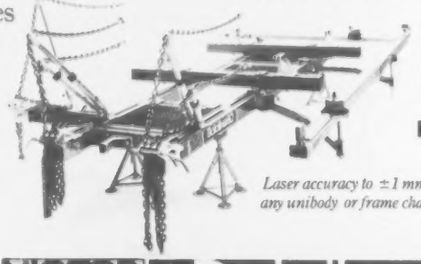
What it takes is a system like Dataliner. Dataliner can put you right into the thick of the collision repair business. It's easy to learn. And it can pull a car back into shape faster, easier and more accurately than anything else on the market.

You don't have to make a major investment in shop redesign or installation either. Dataliner is portable. And its space-saving footprint won't gobble up your square footage.

But what really makes Dataliner so effective is a special combination of measuring and pulling that no other system can match. We give you a choice of two patented measuring systems (laser and mechanical) and all the pulling power you need to turn bashed bodies back into beauties. And actually beat factory specs. That takes care of comebacks and liability problems and makes for satisfied customers. Once the word is out, anyone who values his vehicle is a potential customer.

Dataliner is expandable, too. With five complete hardware packages to choose from, you can tailor your system to your current needs and build it as your business grows.

So whenever you see those casualties of collisions, think of them as income-ing wounded. And think of Dataliner. Along with your new outlook, you'll get a whole new source of backroom revenue.



For more information or a demonstration, call us today.

Totals top previous highs

May, five-month sales set marks

Continued from Page 18

for 45.9 percent of the light vehicles sold during the month, and 43.9 percent of the five-month total.

May sales of small trucks built in the U.S. totaled 115,418 units, up 105.6 percent from last year's 56,124. Imports were 49.9 percent higher than a year ago, 58,650 versus 39,117.

Through May, sales of the domestics were up 106.8 percent to 481,593 units, compared with 232,847 in 1983. Imports totaled 232,693, a gain of 42.1 percent over the year-earlier 163,699.

The domestic compacts accounted for 66.3 percent of the small trucks retailed in May, and 67.4 percent of the five-month total.

Going into June, there were 679,098 unsold new trucks in retailers' hands, an increase of 23.2 percent over the year-earlier 551,316 units.

Light-truck stocks totaled 623,658 units, a gain of 21.8 percent over the year-ago 511,954. Mediums were up 21.9 percent, 13,889 versus 11,396. Heavies totaled 41,551 units, 48.6 percent higher than last year's 27,966.

• Big Three dealers retailed 314,590 new trucks during May, an increase of 41.4 percent over last year's 222,442. The five-month total of 1,352,550 units was 39.4 percent higher than the year-earlier 970,001.

Chevrolet reported 122,567 sales during the month and moved to within 350 units of No. 1 Ford in the five-month count.

Its dealers retailed 496,479 vehicles in the January-May period, up 31.2 percent over the year-ago 378,321 units. The May total was 44.5 percent higher than last year's 84,815 sales.

During the month, Ford dealers sold 115,200 new trucks, bringing the five-month count to 496,821 units. The May total was up 30.7 percent from the year-ago 88,169, while the January-May count was 32.3 percent higher than the previous year's 375,426 units.

Dodge and Chrysler dealers retailed 47,396 units in May, a gain of 90 percent over last year's 24,939. Through May, the total was 104.4 percent higher, from 109,535 units in 1983 to 223,932.

GMC's May sales were the second highest in history, and the total for the final 10 days of the month was the highest ever.

During the month, GMC dealers retailed 29,427 vehicles, a 20 percent increase over last year's 24,519. The alltime May high of 33,368 sales was set in 1978. May also was the 14th straight month in which sales topped the year-earlier count.

Through May, sales totaled 135,318 units, an increase of 26.8 percent over the 106,719 retailed in the like period a year ago.

May sales of Jeep four-wheel-drive vehicles totaled 13,489 units, a gain of 99 percent over last year's 6,777. The downsized Cherokee and Wagoneer accounted for 56 percent of the month's sales.

The five-month Jeep total was up 110.5 percent to 60,494 units, compared with 28,740 a year ago. Again, the smaller Cherokee and Wagoneer took 56 percent of the count.

Only 56 of the discontinued Volkswagen compact pickup trucks were retailed during the month, compared with 753 last year. The January-May total was down from 2,796 units in 1983 to 336.

May and calendar-year sales were up dramatically for all five distributors of the Japanese-built compact pickup and sports/utility vehicles.

Toyota dealers retailed 26,363 new trucks during the month, an alltime high for any month and 70.5 percent higher than last year's 15,465. Through May, the total was up 61.3 percent to 100,305 units, compared with 62,198 in the like period a year ago.

In May, Nissan/Datsun dealers sold 19,003 vehicles, an increase of 63.7 percent over the year-earlier 11,611 units. The total this year included 8,235 trucks built in the U.S.

The five-month count was 117.8 percent higher than a year ago, from 42,016 in 1983 to 91,495. Included in this year's total were 48,888 vehicles assembled in the U.S.

Mazda dealers retailed a record 11,139 pickup trucks during the month, up 59.2 percent over last year's 6,997. Through May, the total was 83.3 percent higher than a year ago, a record 51,457 versus 28,067.

May sales by Isuzu dealers were up 182 percent over last year to 5,045 units, compared with 1,789 in 1983. The five-month total of 14,625 units was up 64 percent, versus 8,919 a year ago.

Mitsubishi's sales during the month were up 61 percent, from 713 last year to a record 1,148. Through May, the total rose 79.3 percent to a record 5,858 units, compared with 3,267 in 1983.

More OE-parts profits for MB, Porsche, BMW

with one of Germany's largest distributors

Established in 1924, Schäferbarthold has come to America. We offer the broadest range of OE parts and German brand-name accessories for Mercedes, Porsche and BMW...at prices substantially lower than the factories. Rapid delivery from our large inventory and European-style professional service. Increase parts profits: call today for our extensive catalog and price list. **Sales Representatives: Selected Areas Available.**

In domestic as well as international markets

Ford aims for 'best-in-class' quality

Continued from Page 49

manufacturing and assembly processes.

6. Monitoring quality and customer service.

7. Outside supplier self-control of quality.

"Market research made it clear that our customers wanted quality products," Geoffrey said. "Once this fact was fully understood by corporate management, quality improvement was established as our No. 1 priority.

"A Quality is Job No. 1 priority was backed by a written corporate policy. Quality improvement objectives were included in the company's five-year business plan, and long-term 'best-in-class' quality goals, expressed as reduced plant and field repairs, were established for all vehicle lines," Geoffrey said.

Among actions demonstrating Ford management's commitment to quality include a vacation shutdown policy set in place at all plants in 1983; assembly line stop buttons being piloted at nine plants, and automation being incorporated wherever possible to minimize operator-induced variation.

Job No. 1 dates have been delayed to assure a high level of quality at launch, Geoffrey said.

"At Ford, competitive quality information is being communicated on a regular basis to all personnel, including UAW management and hourly employes."

Geoffrey said that the most significant step Ford has taken in reducing variability has been a transition from inspection to statistical process control of manufacturing and assembly operations.

"Continually pursuing reduction in parts variability has paid off immensely. As parts are consistently made more nearly alike, the fit and function of parts and assemblies more nearly approach the target or ideal levels," he said.

This has been translated, he said, into annual savings of about $30 million due to reduced inventories at the Cleveland engine plant alone.

Since Ford gets about 50 percent of its production material from outside suppliers, it has attempted to get the vendors to follow its quality quest, Geoffrey said. Suppliers are getting involved earlier in feasibility feedback, development and evaluation. Since 1981, 114 five-day seminars in statistical process control for 4,500 supplier personnel have been completed.

The number of suppliers has been reduced 20 percent "to help increase uniformity of product." Longer-term contracts are being used to assure "ongoing commitment to quality and productivity, he said.

Hess signs

K. H. Hess signs with Chevrolet to become owner of Ken Hess Chevrolet, Inc., Middletown, Pa. Witnessing the signing are, from left: H. C. Marshall, Chevrolet's Philadelphia zone manager, and R. D. Welsh, dealership accountant.

23-day supply on hand

Import-car inventory slashed to record low

Continued from Page 1

Japanese cars were only slightly above the May 1 total and sales of Japanese cars picked up as cars became available. The result was a higher selling rate. And that meant a days-supply level even tighter than the April 1 total of 16.

The German days' supply was the lowest on record, but 50 days of cars could soon begin to sound good for the German makes: U.S. importers said the real shortages have yet to show up on this side of the Atlantic.

• "Our pipline is so long that the stateside inventory has not been affected," a Volkswagen of America spokesman said of Porsche's 21-day supply. "At the moment, we're selling right off the boat."

Although the 911 Cabriolet is already experiencing shortages, the across-the-board shortages will begin to hurt toward the end of this month, he predicted.

BMW, which looks like it had a comfortable 54-day supply, reported regional shortages. German workers not on strike were asked to take their vacations this month instead of in August. By last week, a good portion of BMW's blue-collar and white-collar workers were "vacationing," but it remains to be seen whether the factories will operate during August.

The days' supply at Mercedes-Benz — 19 — was its lowest on record at AUTOMOTIVE NEWS. But again, the importer attributed the decline more to sales increases than to product shortages in the U.S.

• Altogether, the June 1 total of 213,780 new imported cars in dealer and port inventories was 4 percent below the May 1 total of 221,547. And it was 22 percent below the year-earlier inventory total of 275,411.

The June 1 days' supply — 23 — was dramatically reduced from the 32-day supply of a month earlier and the 33 days of a year earlier.

One year ago, the Japanese-car supply was universally accepted as short, at 28 days' worth. But it turned out to be nearly double today's supply level.

Honda recorded a dubious record this month, with its three-day supply of imported cars. In comparison, its 15-day supply of domestically built Accords looks almost robust.

Toyota increased its inventory by 45 percent since May 1, but its sales rate soared even faster. The result: A 10-day supply on June 1, down from a 13-day supply May 1.

The only Japanese make to increase its days' supply, in fact, was Chrysler's Mitsubishi line.

The non-German European makes increased their inventories by a hair last month, but their sales rates declined, so they ended the month with a 54-day supply, up from 48 days a month earlier.

Renault's imports still stand at a phenomenal 232 days. Saab and Volvo increased their inventories a bit, probably in anticipation of the annual country-wide vacation.

Inventories and days' supplies of imported trucks plummeted last month as the sales pace picked up. On June 1, import-truck inventories stood at 73,652, or 29 days' worth, compared with 82,378, or 44 days' worth, on May 1.

Cuts in Isuzu and Toyota truck inventories were the motivating factors.

The inventory of all imported vehicles—cars and trucks—fell to 287,432, or 24 days' supply, on June 1, from 303,925, or 34 days' supply, on May 1.

The inventory of Japanese-built cars totaled 107,508 on June 1, compared with 106,908 one month earlier. The Japanese nameplates and their days' supply levels were Honda (imports only), 3; Toyota, 10; Mazda, 13; Subaru, 14; Nissan, 18; Isuzu, 67, and Chevrolet's new Suzuki-built Sprint, an estimated 107.

In addition, Chrysler carried an 81-day supply of Mitsubishi-built cars: Plymouth Colt, 80 days; Dodge Colt, 81 days, Plymouth Conquest, 146 days, Dodge Conquest, 175 days, and Vista, 52 days.

German-car stocks on June 1 stood at 70,086, down from the May 1 total of 78,927. The German makes and their June 1 days' supplies: Mercedes-Benz, 19; Porsche, 21; Audi, 51; BMW, 54, and VW, 68.

Inventories of other European makes stood at 36,186 on June 1, up from the May 1 total of 35,712. The June 1 days' supply levels were Jaguar, 17; Volvo, 44; Peugeot, 46; Saab, 52; Alfa Romeo, 89, and Renault, 232.

Days' supply figures for import trucks were Mazda, 14; Toyota, 18; Nissan (import and domestic), 26; Mitsubishi, 48; Isuzu, 59, and Chrysler's Mitsubishi-built Ram 50, 102.

17-day supply after 4th decline in row

New-car stock falls to 11-month low

Continued from Page 1

and Honda's U. S.-car supply rose to 15 days from 13.

The June 1 domestic-car inventory was divided this way: GM, 49.71 percent; Ford, 28.11 percent; Chrysler, 15.86 percent; AMC, 3.85 percent; VW, 2.00 percent, and Honda, 0.47 percent.

A month earlier, the breakdown was GM, 53.62 percent; Ford, 26.01 percent; Chrysler, 14.79 percent; AMC, 3.38 percent; VW, 1.78 percent, and Honda, 0.42 percent.

Chevrolet cut its new-car inventory the most of any division: To 40 days from its May level of 54 days. The Chevy Cavalier, at 33 days' supply, and Celebrity, at 28 days, were among the U. S. models in shortest supply.

But other GM divisions also made some big chops in their inventory levels last month.

Pontiac, for example, cut its supply to 43 days from 53. Its Fiero, with inventories enough to last only 11 days, is below even the U. S.-built Honda Accord (15 days). Other Pontiac models are short, too: Firebird has only 35 days' supply; Pontiac 6000, only 34 days.

Oldsmobile Division has four models in short supply: Cutlass Ciera and Supreme, Olds 88 and 98. Altogether, the division has a 31 day supply, down from 38 days on May 1.

Buick cut its inventory and days' supply, too. Its Electra, Century and LeSabre were particularly short. On June 1, Buick's supply stood at 40 days, down from 45 one month earlier.

Cadillac's inventories rose, but its sales rate last month rose more, so the division started June with a 39-day supply, down from 40 a month earlier.

Plymouth, Dodge and Lincoln-Mercury divisions also sliced their days' supply levels last month. The Mercury Marquis, at a 35-day level, and full-size Lincoln, at 28 days, were particularly short.

On the other side of the coin, the big Chrysler Corp. products, all AMC cars, the newer Fords (Tempo, Topaz and Thunderbird), VW Rabbit, Cadillac Cimarron, Pontiac Phoenix and Oldsmobile Firenza topped the bloated-inventory list.

Chevy Malibu, last produced in the 1983 model year, still had a 51-day supply left on June 1 — but that was only 137 cars.

• By class size, the June 1 inventory broke down this way: Subcompact, 21.14 percent; compact, 28.26 percent; intermediate, 29.43 percent; standard, 12.61 percent, and luxury, 8.56 percent.

One month earlier, the breakdown was subcompact, 19.51 percent; compact, 27.83 percent; intermediate, 31.72 percent; standard, 12.54 percent, and luxury, 8.40 percent.

The June 1 days' supply figures by market class:

Subcompact — Alliance, 101; Encore, 90; Rabbit, 83, Daytona, 81; Laser, 72; Lynx, 72; Charger, 71; Pontiac 1000, 67; Turismo, 65; Escort, 60; Omni, 58; Horizon, 52; Chevette, 49; EXP, 45; Accord, 15, and Fiero, 11.

Compact — Eagle, 105; Cimarron, 98; Tempo, 90; Topaz, 87; Capri, 80; Firenza, 72; Dodge 600 two-door, 66; Aries, 61; LeBaron, 61; Camaro, 54; Mustang, 54; Reliant, 52; Skyhawk, 52; 2000 Sunbird, 48; Firebird, 35, and Cavalier, 33.

Intermediate — New Yorker, 81; Thunderbird, 80; Chrysler E Class, 73; Dodge 600 four-door, 73; Phoenix, 70; Cougar, 58; Bonneville, 57; Grand Prix, 54; Malibu, 51; Regal, 48; Monte Carlo, 46; Omega, 45; Citation, 44; Skylark, 43; LTD, 43; Marquis, 35; Pontiac 6000, 34; Century, 32; Celebrity, 28; Cutlass Supreme, 27, and Cutlass Ciera, 24.

Standard—Pontiac, 65; Crown Victoria, 58; Diplomat, 51; Grand Marquis, 51; Chevrolet, 45; LeSabre, 34, and Olds 88, 29.

Luxury — Fifth Avenue, 86; Mark VII, 69; Continental, 68; Toronado, 60; Eldorado, 47; Corvette, 44; Riviera, 43; Seville, 43; Cadillac, 30; Olds 98, 30; Lincoln, 28, and Electra, 25.

Makers assemble 163,202, down a shade for week

Car production holds at high level

By Joe Wilssens
Staff Writer

Overtime at 13 assembly plants helped domestic auto makers maintain production levels last week.

U. S. manufacturers slated completion of 163,202 cars last week, down 0.69 percent from the previous week's 164,341. Last week's tally was 11.19 percent above the year-ago week's 146,785.

So far this year, 3,946,981 autos have been assembled, 30.25 percent greater than 3,030,356 finished during the comparable 1983 period.

The industry's four-millionth car is expected to be assembled Tuesday (June 19).

Of last week's estimated car production in the U. S., General Motors accounted for 54.90 percent, followed by Ford Motor Co., 23.14 percent; Chrysler Corp., 15.84 percent; American Motors, 2.94 percent; Honda, 1.84 percent, and Volkswagen of America, 1.34 percent.

Oldsmobile built its one-millionth car of the 1984 model year Tuesday (June 12), the earliest date the division has reached that total.

Oldsmobile also reported that the G line at the company's Lansing facility will resume production today (June 18) while the B line at Lansing will remain down until Aug. 6. Both will produce the GM20 auto.

GM's Wilmington (Del.) and Baltimore plants will also remain down until August for model changeover.

Chevrolet concluded assembly of its El Camino model at the Arlington (Tex.) facility June 8.

GM led the overtime list with seven plants working two Saturday (June 16) shifts. Extra hours were scheduled at the company's Arlington (Tex.), Doraville (Ga.), Fairfax (Kans.), Framingham (Mass.), Linden (N. J.) and Flint B and G plants.

The Wayne (Mich.) plant was the only Ford facility reporting Saturday overtime last week.

At Chrysler, the Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two 9-hour daily shifts last week while the Jefferson (Detroit) plant scheduled two 8½-hour daily shifts. Jefferson was also scheduled to operate two 8-hour Saturday shifts.

ITC finds imports hurting steel; price hike to hit cars

By Roger Rowand
Engineering Editor

DETROIT — Relief for U.S. steel makers from imported pressures means steel prices will go up. Resulting rising costs for auto makers will be among reasons for higher stickers of 1985-model cars and trucks.

Last week the ITC ruled that U.S. steel makers have been injured by imports of some steel types including sheets, strip and wire products heavily used in the auto industry.

In all, some 70 percent of all imported steel comes under the injury ruling.

What happens now is tightly-structured. ITC has scheduled public hearings for June 21 on what relief for the steel industry should consist of. Then, on July 24, it will forward its specific recommendations for relief to the White House.

President Reagan then has 60 days in which to act. That brings decision time to late September, just before elections.

Regardless of how relief is spelled, U.S. restrictions will mean immediate higher costs of the auto industry's staple metal.

After the ITC injury ruling, Donald H. Trautline, president of Bethlehem Steel Corp., said relief will require an immediate average price increase of $50 a ton. He said a study by Data Resources, Inc., concluded that much would be needed.

The average price now, he said, is $443 a ton.

Bethlehem and the Steelworkers Union, in a joint statement, said:

"With meaningful import relief, the domestic steel industry will be able to increase and stabilize employment as well as generate sufficient cash flow to finance the remaining portions of the modernization efforts needed to maintain the industry's competitive position."

General Motors said it would be premature to comment on the ITC action and declined to comment on the impact of the anticipated steel price increase.

Innocenti for Thomas

WINDSOR, Ont. — Mark Thomas has added Innocenti at his Windsor Imported Autos, Ltd. He also has a Mercedes-Benz franchise.

Truck production slips a bit from '81 weekly high

U. S. truck manufacturers scheduled overtime hours at assembly facilities last week to maintain the upbeat output pace of the previous week.

The makers targeted production of 65,459 trucks last week, down 1.89 percent from the previous week's 1984 record weekly build of 66,716. Last week's tally was 24.19 percent above the year-ago week's 52,710.

Year-to-date, 1,489,836 trucks have been completed, 37.58 percent above the 1,051,114 finished at this time last year.

General Motors scheduled two Saturday (June 16) overtime shifts at its Pontiac plant No. 6.

Ford Motor Co. scheduled Saturday overtime hours at its Kansas City facility.

Canada builds 25,086 cars for highest '84 total

Canadian auto production last week held steady at its 1984 peak.

The makers targeted completion of 25,086 cars last week, 12 units more than the previous week's 25,074 and 6.16 percent greater than the year-ago week's 23,631. Last week's estimated auto build was the highest weekly production Canada has recorded this year.

Year-to-date, 543,439 cars have been completed, 10.03 percent higher than 493,913 finished at this time last year.

Canadian truck manufacturers slated assembly of 17,246 units last week, down 4.27 percent from the prior week's 18,015 but 35.30 percent above the year-ago week's 12,747.

So far this year, the makers have finished 399,539 trucks, 57.58 percent greater than 253,552, the 1983 total at this point.

General Motors scheduled Saturday (June 16) overtime at all three of its Oshawa (Ont.) facilities last week.

Chrysler Corp. also scheduled Saturday overtime at its Windsor (Ont.) plant and estimated production of 2,358 Dodge Caravans, 2,346 Plymouth Voyagers and 936 Mini Ram Vans last week. The output lifted the plant's 1984 build over the 100,000 mark for a year-to-date T-115 total of 105,316.

Toyota MR2 heads for U. S. next year

Toyota's miniature flagship, the mid-engined coupe shown as the SV-3 at last year's Tokyo Motor Show, has been renamed MR2 and is on sale in Japan. The car is 49 inches nigh, 154.5 inches long and sits on a 91.4-inch wheelbase. It will come to the U. S. in January. Story on Page 8.

Extra sticker notes place of assembly

Dealers receive Mexican K-cars

By Mary Beth Mayer
Staff Writer

Some of the 1,000 K-cars which Chrysler de Mexico S.A. will export to the U.S. this month are now on the lots of dealerships in Chrysler Corp.'s 10 southernmost zones.

Chrysler de Mexico will send to the U.S. 1,000 cars per month through August with exports continuing into the 1985-model year. The cars are assembled in Toluca, just south of Mexico City.

A Chrysler spokesman said the Toluca-built cars are identified as such on the sticker and on another label alongside the sticker.

Chrysler sends a questionnaire to purchasers of its vehicles. Buyers of the Mexican K-cars will receive such a survey with an extra question asking if they were aware that their vehicles were built in Toluca, the spokesman said.

Broadway Dodge, San Antonio, is one of the dealerships which has received some Toluca-built K-cars.

"In this town where 70 percent of the people have Hispanic surnames," said Keith Mason, dealership general manager, "I don't feel any differently about the K-cars which come from Mexico."

Mason said that the dealership has many Hispanic employes. "Those people are good people," he said. "I feel confident that (the Mexican workers) will deliver quality products."

• Two Mexican gentlemen recently visited Mason at the dealership.

"One was the chief inspector at the Toluca facility and the other was the plant's quality control manager," said Mason. "They traveled all the way here to make sure the cars they sent us are satisfactory.

"I've been in the car business 20 years and I've never had anyone in Detroit ask me how I like the way they are building the cars," he said.

Mason said that he does not feel it is necessary to point out to prospective customers that the cars were assembled in Mexico.

"It's there twice on the window labels—that speaks for itself," he said.

Benson Ingram Park Co. (Chrysler-Plymouth-Mazda), San Antonio, has also received two of the Toluca K-cars.

Guy Sensiba, a salesman at the dealership, said that the quality appears to be equal to the cars' U.S.-built counterparts.

"I wouldn't point out the origin of these cars to customers because we don't point out that the Voyagers are made in Canada and that's the same thing," Sensiba said.

"I don't care where the cars are made as long as the quality is there and it's guaranteed," said John Creveling Jr., Creveling Dodge Motor Co., Corpus Christi, Tex. "We don't discriminate against our neighbors."

Engine trend reversed; V-8s stage comeback

By Keith Gave
Detroit Reporter

Stabilized gasoline prices have helped fuel America's rekindled love affair with faster and bigger cars, and U. S. auto makers are responding by producing more V-8 engines and fewer 6- and 4-cylinder powerplants, reversing a five-year trend.

In the '83 model year, V-8 production rose to 31 percent of production, an increase of 3 percentage points, as domestic manufacturers turned out 1,854,062 of the big engines. And an Automotive News survey last week indicated they plan to build more this year.

"People are much more interested in performance and luxury cars than they were a couple of years ago," said David Healey, an auto analyst in New York with Drexel Burnham Lambert, Inc. "There's a willingness to get into the cars you really want rather than the cars you think you ought to have."

They're able to do that, Healy explained, because concern over gasoline prices and availability has passed.

"It's kind of funny, they're shooting up tankers in the Persian Gulf, but nobody cares," he said. "And the memories of the long lines at the gas pumps (a result of problems in the Middle East 10 years ago) is fading."

• In the 1979 model year, domestic auto makers made 5,457,038 V-8 engines, which accounted for 58.39 percent of production. They made 2,243,736 six-cylinder engines that model year, accounting for 24.01 percent, and just 1,644,731 four cylinder powerplants, or 17.6 percent.

But the second "oil shock" of that decade resulted in a dramatic turnaround. As gasoline

GM to continue $6 billion a year in capital outlay

By Marjorie Sorge
Labor Editor

General Motors will spend $6 billion to $7 billion a year for the foreseeabe future on new plants, innovation and new product development, according to Alexander A. Cunningham, executive vice president, North American Passenger Car Operations.

"I don't see the overall spending program of General Motors for new plants, innovations and so on diminishing to a large degree," he said. "If you take two things into consideration — the need to stay competitive in the business and the effect of inflation — it is not difficult to predict that we will be doing that for a long time."

In an interview with Automotive News, Cunningham also said that under GM's reorganization, the divisions will be able to initiate joint ventures, decide on their own introduction dates and form their own companies outside of GM. Suppliers must also reorganize if they intend to continue to supply GM.

Potential GM executives, he said, will have to be "jacks-of-all-trades," not specialists, if they want to move up the ladder. There will be cuts in the finance, public relations and central office staffs, and the future marketing staffs will not be made up solely of marketing people.

Cunningham heads the GM reorganization.

The annual $6-billion-to-$7-billion expenditure is over and above the five-year, $40-billion capital spending program GM announced in 1980. That money, Cunningham said, is already spent.

Some of the new money will be used to refurbish aging assembly plants and some will be used to build new plants. According to Cunningham, GM will need at least two new facilities to continue taking 46 percent of the U. S. market, given annual sales of 14 million cars and trucks.

GM will modernize other plants and some will be retooled to build more cars an hour.

Even when pressured, he wouldn't say how much GM intends to increase its market share under the reorganization, which should be completed by 1988. But, he said if GM does take more of the market, it will take it from both domestic and foreign competitors.

"We will pick on the people who are not doing the job of satisfying the customers like we are," Cunningham said. "But whoever that might be, we are going to take a bite out of the company that is trailing the pack."

The GM reorganization plan, announced earlier this year, divides the five car divisions and Canadian operations into two supergroups. Buick, Oldsmobile

breaking news

Ford puts Lutz back at European helm

DEARBORN. — Robert A. Lutz is returning to Europe to run Ford of Europe. He will be chairman and chief executive officer of that Ford Motor Co. subsidiary.

Ford of Europe has been leaderless since the recent departures of Edward Blanch, chairman, and James Capolongo, president. Blanch retired this spring at the age of 58. Capolongo's resignation followed, leaving the company without a president or chairman. Capolongo is 49.

Ford lost the European sales championship to Renault last year on a late surge by the French maker. Since Europe accounts for 30 percent of Ford Motor Co.'s auto business, that defeat did not sit well.

Lutz will continue as an executive vice president and a director of Ford Motor Co. He had been in charge of Ford International Automotive Operations, which no longer exists in its former form as a result of the restructuring.

Ford's overseas activities now are divided into two parts: European Automotive Operations, which is Ford of Europe, and the rest of the world. Those activities will be headed by Lindsey Halstead, a Ford Motor vice president who was in charge of Latin American operations.

Lutz headed Ford of Europe before he was promoted to executive vice president and placed in charge of all the company's overseas business. As noted, he will be chairman of Ford of Europe. The president will be appointed.

For '86 N-truck, V-6 engine

Chrysler to expand three Detroit plants

By Dan McCosh
Detroit Reporter

Chrysler Corp. is planning three significant plant expansions in the Detroit area aimed at 1986 model year programs, according to Chrysler sources.

Chrysler's 1986 N-truck, a late 1986 model year program for a mid-size pickup, accounts for two of the expansions: A new 3.9-liter, V-6 engine is currently planned for its Detroit Mound Rd. engine plant, now building its 5.2-liter V-8.

Chrysler also expects to assemble the truck in an expanded Warren (Mich.) truck plant. New capacity also is being added at Chrysler's Trenton (Mich.) engine plant to build two new derivatives of its 2.2-liter 4-cylinder engine to handle 1986 car programs.

Chrysler's new N-truck is significantly larger than both the minivan and the closest competitive products — Chevrolet's S-series pickups and Ford's Ranger.

The new V-6, with a 90-degree cylinder bank, is sized to run on compatible tooling with the V-8s currently being built at Mound Rd. and allows production to be swung to either engine depending on market demand.

Chrysler's mothballed Windsor (Ont.) engine plant does not figure into current plans, although it once shared some machining operations with Mound Rd.

To expand the Warren truck plant, Chrysler recently purchased a 47-acre tract formerly owned by Jones & Laughlin Steel Corp., adjacent to its Warren plant, to make room for new paint and body lines, plus add parking needed for "just-in-time" inventory control.

Flexibility between the new N-truck and full-size pickups currently being built at Warren will be a key factor in the plant design.

• Meanwhile, new capacity to build new 1.8-liter and 2.5-liter engines based on the existing 2.2-liter 4-cylinder is being added at Trenton. It will bring planned output to the 1.1-million-unit range by the end of the 1986 model year, making the Chrysler engine complex one of the largest in the industry.

The 2.5-liter version of the engine features a counter-rotating balance shaft originally developed by Mitsubishi, which demands the installation of a separate assembly line.

Chrysler's domestic production plans dovetail with its recent announcement that it will be importing a small V-6 engine from its Japanese affiliate Mitsubishi Motors Corp., and some resourcing to its Mexican operations.

The Mitsubishi engine, due to be imported late in the 1986 model year, is slated as a power upgrade for Chrysler's minivans, currently Canadian-built in its Windsor assembly plant, as well as several Mitsubishi-built products.

Largest engine currently available for the minivan is the Mitsubishi 2.6-liter 4-cylinder.

Impact of the moves on Chrysler's U. S. employment depends on both market demand and some future sourcing decisions — including the location of a second plant for the minivan, said a Chrysler spokesman.

The truck and engine sourcing, however, does represent a strong counter to some recent decisions to source cars and engines outside the U. S.

Chrysler recently told its suppliers it is planning U. S. production capacity for 1.7 million front-wheel-drive vehicles by 1987.

Chrysler link will not affect Maserati in U. S.

Chrysler's new tieup with Italy's Officine Alfieri Maserati S.p.A. won't affect sales or distribution of Maserati automobiles in the U. S., says Kjell Qvale, chairman of U. S.-based De Tomaso Industries, Inc.

"Chrysler's sports car will be powered by a Chrysler engine—it will be a Chrysler product," Qvale said, while acknowledging the sale of a Maserati-built chassis in Chrysler showrooms (planned for the 1987 model year) will increase the visibility of Maserati in the U. S.

"The Chrysler car won't be sold in Maserati dealerships, and Maserati cars won't be sold in Chrysler dealerships," he said.

"The problem was to fill up the capacity of our plant. We have capacity for 100,000, and we only build 20,000 Maserati models," Qvale said.

Chrysler, which recently purchased a 5 percent equity in Maserati, plans a cooperative venture to produce a mid-engine sports car using a Chrysler powerplant.

— Dan McCosh

Buffum fifth in Acropolis Rally

Driving the B.F. Goodrich Audi Quattro, John Buffum finished fifth overall in the Acropolis Rally—the highest finish for an independent driver and the highest finish ever for an American, according to Goodrich. Buffum ran on standard-production Goodrich passenger-car and light-truck radials in the four-day event, which began and ended at the foot of the Acropolis in Athens.

Tax compromise slows luxury-car depreciation

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — A compromise to slow the excessive tax depreciation of luxury cars used by businesses, and to stop the growing practice of using luxury vehicles as tax shelters, was agreed to last week by House-Senate tax conferences.

Although importers of high-value autos would still smart from the rule change — since present law allows hefty tax write-offs in the first three years of vehicle ownership for business use — luxury-car importers will probaby recognize the compromise as being more acceptable than the original proposals passed in the House and Senate.

As agreed to in conference, the compromise does away with House and Senate caps on the total depreciable worth of business-use cars, allowing total depreciation of the business-use portion of a vehicle — although slowly.

Sources say the compromise was adopted partly as the result of pressure from the West German government, which was opposed to the caps. West German makers of high-priced cars such as Mercedes-Benz and BMW strongly disapproved of the write-off ceilings.

The original Senate bill would have imposed a ceiling of $15,000 that could be written off on a business auto, while the House version called for a $21,000 limit.

• The original House and Senate approaches were abandoned largely in favor of an Automobile Importers of America-originated proposal that any limitation on depreciation be made conditional on a business-use test with straight-line depreciation retained below that level. It would have limited the amount to be depreciated each year to $4,000 in the first year and $6,000 in subsequent years.

Under the compromise, vehicles will be required to meet a 50-percent business-use test — rather than the 90-percent test in the original Senate proposal — in order to qualify for the Accelerated Cost Recovery System (ACRS) and a $1,000 Investment Tax Credit (ITC) allowed only in the first year of vehicle ownership. Under present law ITC's can exceed $1,000.

At AIA's urging, the conferees agreed to reinstate depre-

Germans turn to arbitration in auto strike

By Richard Feast
European Editor

FRANKFURT, West Germany. — The outcome of the independent arbitration to find a settlement to the six-week-long metal industry strike in West Germany should be known by the end of this week.

The arbitration team, headed by a former Social Democrat minister and head of the Construction Workers' Union, convened last Wednesday (June 20). Georg Leber's panel comprises three representatives each from the employer's federation, Gesamtmetall, and the union, IG Metall.

Both sides insisted that any recommendations should be unanimous ones, fearing a majority purely because of the chairman's vote. But, importantly, the arbitration decision will not be binding.

The strike arose because of a union demand for a five-hour cut in the 40-hour work week without any proportional cut in pay. The issue has turned into the bitterest management-labor confrontation in the Federal Republic in the last six years.

The employers have offered a two-stage reduction to 38 hours for some employe groups, but the union is holding out for the full concession.

Last week, the country's vehicle industry was almost at a standstill. Estimates are of 200,000 units in lost production, at a cost of $2.3 billion.

Adam Opel AG, a General Motors subsidiary, has lost 70,000 cars valued at $362 million, because of the strike. Opel is currently losing 4,000 cas a day. According to a GM spokesman, the strike has not yet hurt sales since Opel usually carries a 75-to-80-day supply, but model selection is becoming thin.

Although GM operations in Spain and the United Kingdom were still operating at press-time, the spokesman said Spain would likely be down by the end of last week and the UK by the end of the month.

Doctors endorse passive restraints

CHICAGO. — The American Medical Assn. has endorsed a resolution calling for supporting mandatory air bags or other passive restraints in all new cars, domestic and foreign, in an effort to reduce traffic deaths.

The AMA endorsed passive-restraint systems in 1970, but last week's resolution combined six proposals by AMA members who want a stronger policy on seat belts or air bags.

Blacks complain of 'redneck' approach in the field

PUSH accuses auto industry of racist attitude

By Keith Gave
Detroit Reporter

Ford Motor Co.'s alleged "racist" attitude toward minority dealerships is pervasive throughout the auto industry, says a civil-rights group that plans to confront all the major car companies about the lack of black dealers and the chronic problems they face.

"The racism that has been the attitude, and even the policy, is simply perpetuated year after year, and upper management allows it to exist," said the Rev. George Riddick, spokesman for Operation PUSH — People United to Serve Humanity.

"Black people buy a lot of cars," said Mel Farr, a Ford dealer in Oak Park, Mich. "We ought to be able to sell them, too."

Farr is chairman of the Black Ford and Lincoln-Mercury Dealers Assn. A former running back for the Detroit Lions, Farr got his start in the business through Ford's Minority dealership training program during the off-season and took over a dealership nine years ago.

Now he's running the ball for 55 black dealers, who represent less than one percent of Ford's 5,620 dealers. And the Rev. Jesse Jackson, Democratic hopeful and PUSH founder, is running interference.

Engine trend reversed; V-8s stage comeback

Continued from Page 1

prices soared past the $1-a-gallon level by early 1980, U. S. auto makers slashed by more than one-half their production of larger engines.

In the 1980 model year, V-8s accounted for just 29.69 percent of the market, while four-cylinder-engine production doubled to 33.18 percent and six-cylinder-engine production climbed to 37.13 percent of output.

The trend continued in 1981, but began to show signs of turning around in the 1982 model year. Although V-8 production fell to its low of 1,600,933, V-8 penetration climbed to 28.02 percent, from 26.74 percent the year before.

Four-cylinder production reached its peak penetration of 42.54 percent, while six-cylinder production slipped to 29.44 percent of the total build.

Then, as auto makers moved to fill the need for American car buyers, dormant hunger for speed and comfort, the numbers of big engines began to creep higher.

• "Engines reflect car sizes, and the buying public is moving to larger cars," said Philip E. Benton, Ford Motor Co. vice president, sales operations. "This is a normal pattern in the year of increasing economic activity."

Ford projects building 620,000 V-8 engines in the 1984 model year, compared with 361,000 a year ago.

"Buyers have greater confidence, gas prices have been stable, and vehicle prices and retail interest rates have risen very little," Benton said. "These economic conditions are the basic ingredients of today's market structure."

Thomas F. O'Grady, auto analyst for Chase Econometrics in College Park, Pa., expects the trend to continue, at least for the next few years, because gasoline prices are expected to continue to decline "at least in real terms," until about 1986, when analysts anticipate shifts in oil production and availability.

"Now, car buyers can go back to their love of cars and the enjoyment of a good quick car with nice performance," O'Grady said.

• While V-8 engine production will never again account for more than 65 percent of the market—as it did in 1978—O'Grady predicted that big-engine production will increase because the "sportier segment of the industry is the fastest growing segment of the market right now and it is expected to continue to grow in record levels at least over the next few years."

And the demand for larger, luxury models that have customarily been powered by the biggest engines should also continue to grow, O'Grady said.

Of course, as Healy warned, that would come to a screeching halt if you had gasoline problems or a big decline in the economy."

"Those things could happen," he said, "but I don't see it on the near horizon."

Even if it did, Detroit would be able to react much quicker to a sudden demand for maximum fuel efficiency that smaller engines provide, O'Grady said.

U. S. auto makers "have the availability in the smaller engines" that they didn't have when the oil embargo of 1973-74 rocked the industry, he said.

Congress moves on GI Japanese cars from Guam

Continued from Page 2

cars were imported through Guam, Levin's aide said.

There weren't any imports through Guam in fiscal 1981. This year, an estimated 3,000 will be brought in, according to Dingell. The liberalized armed services policy would open the doors for many times that number, his aide said.

The House-approved measure would allow 200 cars to be imported each month through September, 1985, when importation would be cut off unless Congress adopts legislation addressing Guam.

Dingell had lobbied for the stricter provision that Levin and Senator Dan Quayle, Indiana Republican, pushed through the Senate Armed Services Committee. That would allow only 100 cars a month through March, 1985.

The Senate had not yet voted on the defense spending bill at press time. If approved, a compromise would have to be reached in a House-Senate conference committee.

If Guam loses the U. S. military personnel market, it will be a major blow to one of the island's biggest businesses.

The last time the market was depressed in Guam—last year—Japanese-made cars made their way into the showrooms of U. S. dealers from Guam. (Automotive News, Oct. 10 and Oct. 24, 1983). These, too, were outside the quotas.

That practice stopped when prices of the Guam cars rose in response to home demand, and it became unprofitable for U. S. dealers to pay full price plus shipping charges for the cars.

Dodge, dealers help Special Olympics

Dodge and 20 Texas dealers were major sponsors of the state's 17th Special Olympics games for handicapped persons. Mid-engined car coming to U. S. next year

Toyota coupe to take on the Fiero

By John Hartley
Staff Correspondent

TOKYO. — Toyota has unveiled its miniature flagship, the mid-engined coupe shown as the SV-3 at last year's Tokyo Motor Show. It has been renamed MR2 and is on sale in Japan.

It is expected to arrive in the U. S. next January, where it will be a competitor for the Pontiac Fiero.

The MR2 is a sporty auto, with its concealed headlamps and sloping nose into which the bumper is neatly integrated. The car has a slight wedge line accentuated by a tiny crease that runs along the waistline from headlamp cover to tail.

As on the SV-3, the rear pillars are fairly wide and slope rearward while the rear window is almost vertical. This layout is necessary to give access to the mid-mounted engine.

There is an intake for the front-mounted radiator below the bumper, and there is an air intake for the engine compartment on the right rear flank of the body. Usually, the body tucks in to narrow sills, but on the top model, there are plastic add-on panels to flare the sills outward.

Also on the top model is a rear spoiler, which reduces rear lift to the same value as at the front — said to be very low by the Toyota engineers. The spoiler, together with a small one on the rear of the roof, also helps bring the Cd down from a creditable 0.35 to 0.34.

Picture on Page One.

• Of course, one of the advantages of the mid-engine layout is that the driver and passenger can sit very low, because there is no engine to obscure forward vision.

By Japanese standards, the MR2 is very low with a height of 49 inches, so the car has a small frontal area which is conducive to high speed and good gas mileage on the expressway. But the MR2 is almost 3 inches taller than the Fiat X 1/9.

Clearly, the Toyota engineers had a good look at the X 1/9 before they came up with their design, which has an almost identical layout. Thus, the engine is mounted transversely behind the driver and passenger, while the radiator is at the front.

Overall length is 154.5 inches, which is virtually the same as the Fiat, although the 91.4-inch wheelbase is some 4 inches longer. The width is 65.5 inches, but the tread is wider than on its competitors — 56.7 inches in front and 56.9 inches at the rear.

Incidentally, the car is 10 inches shorter than the Corolla Levin coupe, which is to some extent a competitor.

Of course, the MR2 is two-seater pure and simple, but Toyota has provided a luggage locker of reasonable size behind the engine — you can just about get a set of golf clubs in. There is also a tiny trunk in the nose, sandwiched between the skinny get-you-home spare tire and the bulkhead behind the radiator.

• One unusual feature of the layout is that the gas tank is inserted longitudinally into the tunnel between the driver and passenger.

Although this tucks it out of the way, where the amount of fuel in the tank will not affect weight distribution, it does limit capacity to 7.5 gallons, the same amount as in the Honda CRX, but two gallons less than in the Corolla.

Weight distribution is quoted as 45 percent front, 55 percent rear, so the car should have excellent traction. It should also have excellent cornering and braking.

However, Toyota is not aiming the car straight at the sporty driver; in addition to the twin cam 1.6-liter 16-valve 130-EHP engine, there is the option of a 1.5-liter single OHC unit producing 83 BHP and designed for good gas mileage.

These are normally coupled to a five-speed manual transaxle, but a four-speed automatic can be supplied with the smaller engine.

Therefore, Toyota is aiming the car at people that want a light and compact runabout as well as those who want exciting performance.

A sales target of 2,000 units monthly has been set in Japan, but next January the MR2 will come to the U. S. and Canada in volumes of 3,000 a month. In addition, 300 will be sent monthly to Europe.

Government spent $75,000 on investigation

Details of DeLorean sting revealed

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — A government agent who posed as an underworld kingpin took the stand in the John DeLorean drug trafficking case here and told prosecutors he was surprised when he learned the former auto maker wanted to get involved in a narcotics transaction.

John Valestra, who posed as John, an underworld figure willing to invest millions in drug profits in the DeLorean Motor Co., said he was shocked to learn from James Timothy Hoffman, the government's informant in the case, that DeLorean was interested in using the deal to generate cash for his failing car company.

Valestra recounted how he authorized Hoffman to begin taping conversations with DeLorean after the informant's initial contacts, which were unrecorded.

The prosecution went over transcripts of DeLorean's meeting with Hoffman and Valestra at the Boneventure Hotel, in Los Angeles, on Sept. 28, 1982, when the agent was introduced to DeLorean in undercover role as John Vicenza.

The government also played for the third time a tape of DeLorean's arrest at the Sheraton La Reina Plaza Hotel, near the Los Angeles airport, on Oct. 19, 1982. Valestra said the cocaine was placed before DeLorean to test his reaction to it and to gather more evidence for the sting operation.

Defense attorneys began cross-examining Valestra last week and attacked the agent's handling of various investigative reports and filings. Several of the report forms were back-dated to meet DEA guidelines. Valestra admitted to the practice, saying he did it to pass internal inspections.

Last week's testimony also revealed the government spent more than $75,000 in toll charges and expenses in investigating DeLorean, William Morgan Hetrick and Stephen Arrington.

Nissan observes Smyrna milestone

SMYRNA, Tenn. — At a company-wide meeting at Nissan Motor Mfg. Corp. U.S.A., nearly 2,000 employes celebrated the first anniversary of pickup truck production.

That first truck was presented to the Tennessee State Museum as part of the anniversary observance.

Mercedes hosts dealers' children

Mercedes-Benz of North America played host to 20 of its dealers' children during a two-week program held at the firm's main office in Montvale, N. J., and at Daimler-Benz, MBNA's parent company, in Stuttgart, West Germany. Above, Han-Juergen Hinrichs, Daimler-Benz board of management member in charge of sales, addresses the group during its visit overseas.

20 children of U. S. dealers take Mercedes trip

Next generation gets look at M-B

MONTVALE, N. J. — Twenty children of U. S. Mercedes-Benz dealers have taken a close look at the company's operations in this country and in West Germany.

The group, which included 19 sons and one daughter, spent a week at Mercedes-Benz of North America's main office here. The group also went to Stuttgart, the headquarters of Daimler-Benz, MBNA's parent company.

The seminar was designed to show the participants, who expect to be dealers one day, the workings of the Mercedes-Benz organization.

"These persons are important to us, because they represent our future," said MBNA Sales Vice President Burghard von Cramm.

"We invited them to see, first-hand, what the Mercedes organization is all about so they will be prepared to run their dealerships and be true representatives of Mercedes-Benz."

During the first week of the program, participants discussed matters directly affecting dealership operations. In the second week, they toured Daimler-Benz passenger-car and truck factories.

All seminar participants have been actively involved in their dealerships for several years, most in management positions.

• Participants were: Randy Ashcraft, Riverside Motors, Little Rock; Michael Britt, Britt Imports, Midland, Tex.; Perry England, England Motor Co., Greenville, Miss.; Mark Farina, Farina Motors, Massillon, O.; Daniel Gauthier, Gauthier Motors, Salem, Mass.; James Gordon, Herb Gordon Oldsmobile, Silver Spring, Md.; James Haun, Haun Motors, Bluefield, W. Va., and Ronald Heller, Mark Motors, Arlington Heights, Ill.

More were: Charlton Holmes, Holmes Pontiac Co., Shreveport, La.; Bruce Johnson, Johnson Motors, West Covina, Calif.; Carl David Johnson, Carl Johnson's Automotive Center of New Bern, New Bern, N. C.; Jeffrey Kimball, Kimball Motor Co., San Luis Obispo, Calif., and Tom Kinnebrew III, Kinnebrew Motors, Tallahassee.

Rounding out the group were: Karl Knauz, Knauz Continental Autos, Lake Forest, Ill.; Gregory Rasmussen, Don Rasmussen Co., Portland, Ore.; William Rehwald, W. I. Simonson, Inc., Santa Monica, Calif.; Mark Sawyer, Sawyer Auto Imports, DeKalb, Ill.; Dean Serrentino, Cambridge Imported Cars, Somerville, Mass.; Richard Snyder, Snyder's Auto Sales, Greenville, S. C., and Darlene Wigboldy, Star Motors, Evergreen Park, Ill.

Sales forecasts for this year are compared

HELENA, Mont.—NADA was right on target with its 1983 sales forecast of 9.2 million cars, according to the Montana Automobile Dealers Assn. bulletin.

Forecasts of millions of sales made in October, 1982, were listed by the Montana association as follows:

NADA	9.2
Data Resources	9.3
Merrill Lynch	9.5
*Consensus	9.6
Wharton	9.9
Conference Board	10.0
David Healy	10.3
University of Michigan	10.5

*Consensus of 43 economists.

In October, 1983, new-car sales forecasts for 1984 were made. Again in millions, they were:

Conference Board	9.8
Merrill Lynch	10.0
Maryann Keller	10.2
NADA	10.4
Consensus	10.4
University of Michigan	10.5
Robert Eggert	11.0

Takes 69 pct. of March registrations vs. 78 pct. last year

Japan loses ground in import field

By Jenny L. King
Staff Writer

Japanese-built passenger cars dropped to 69.38 percent of the import market in March, compared with year-earlier penetration of 78.30 percent, according to registrations information from R. L. Polk & Co.

Import registrations as a whole were down, March to March, but were up 5.44 percent for the first quarter of the year. Japanese products dropped to 137,921 from 161,017 in March, the final month of their 1983-84 restrictions year.

Total imports registered during the month numbered 198,802, down 3.34 percent from 205,643 in 1983. Year-to-date import registrations of 588,130 were up 5.44 percent from 557,780 in 1983.

Honda moved boldly ahead in March, to 40,493 from 32,295 registrations, up 4.67 percentage points in the market and into first place among imports.

Second-place Nissan dropped 3.09 percentage points and Toyota, in an unaccustomed third place, plunged 4.21 percentage points. Honda's total includes both imported and U. S.-produced passenger cars.

Other importers gaining ground were Volkswagen, up 0.75 percentage points; Volvo, up 1.17 percentage points; Mercedes, up 0.76 percentage points; Audi, up 1.30 percentage points, and BMW, up 0.64 percentage points.

Mazda and Subaru lost footing, down 0.99 percentage points and 0.61 percentage points, respectively.

Ten imports claimed 89.85 percent of the import total in March, up from 89.46 percent a year earlier.

• For the first three months of 1984, Honda again was the large-scale winner, gaining 3.69 percentage points over its market share of 1983: Up to 19.44 percent from 15.75 percent. VW was up 0.73 percentage points (VW figures also include U. S.-built cars with imports) and the other European makes — Volvo, Mercedes, BMW and Audi — enjoyed advances in the market.

Toyota was down 3.20 percentage points in the first quarter, although it retained first place in volume by a narrow margin. Nissan dropped 3.27 percentage points, Mazda was down 0.91 percentage points and Subaru dipped 0.06 percentage points.

Ten imports claimed 89.36 percent of the first-quarter market, down 89.98 percent in 1983.

While Japanese products dropped to a 69.38-percent penetration this March from 78.30 percent a year ago, German cars climbed to 13.96 percent from 10.38 percent, Swedish products grew to 6.39 percent from 4.77 percent and the U. S. category swelled to 7.96 percent from 3.79 percent.

March import registrations from Japan and Europe were:

	March, 1984	March, 1983
Japan	137,921	161,017
West Germany	27,755	21,336
United States	15,822	7,785
Sweden	12,696	9,812
France	2,678	3,600
Great Britain	1,379	1,125
Italy	518	910
Ireland	33	58
TOTAL	198,802	205,643

First-quarter country-of-origin figures showed Japan slipping to 71.56 percent from 78.50 percent of the import market. German cars expanded to 13.18 percent from 10.67 percent; Sweden climbed to 5.50 percent from 4.47 percent, and the U. S. category grew to 7.51 percent from 3.66 percent. The numbers were:

	3 mos., 1984	3 mos., 1983
Japan	420,872	437,868
West Germany	77,490	59,528
United States	44,210	20,414
Sweden	32,342	24,959
France	7,802	9,644
Great Britain	4,210	2,999
Italy	1,109	2,227
Ireland	95	141
TOTAL	588,130	557,780

Registrations of imported small trucks continued their steep upward climb in March with a gain of 59.63 percent, to 57,332 from 35,916 last year. Numbers by major makers were:

	March, 1984	March, 1983
Toyota	19,576	11,533
Nissan	19,075	8,790
Mazda	9,727	5,726
Dodge Ram 50	2,994	2,339
Others	5,960	7,528
TOTAL	57,332	35,916

Imported truck registrations were up 59.45 percent the first quarter this year compared with the same period of 1983. Through March, 163,230 new trucks were enrolled across the country whereas 102,371 was the total a year earlier. Numbers per manufacturer included:

	3 mos., 1984	3 mos., 1983
Toyota	59,814	33,208
Nissan	48,275	25,311
Mazda	27,894	13,675
Dodge Ram 50	9,070	——
Ford Courier	——	7,563
Others	18,177	22,614
TOTAL	163,230	102,371

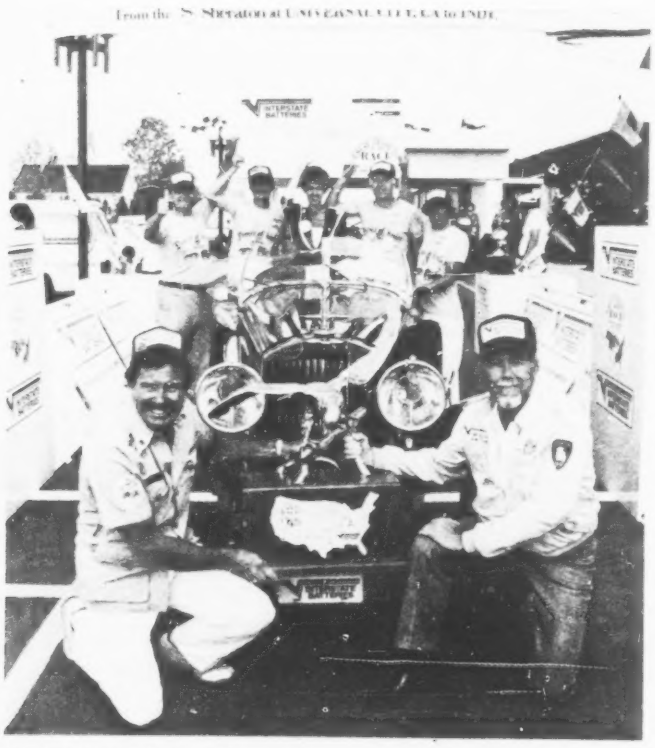
Tippett to be honored

DETROIT. — Camp Fire Detroit Area Council will honor Paul Tippett, American Motors chairman, at a fund-raising luncheon June 27 at Dearborn's Fairlane Manor. Camp Fire is honoring Tippett in recognition of his service to the community.



Great American winners

First place in the Great America Race went to Gary Wales, left foreground, who is accepting a trophy from Norm Miller, president of the sponsoring Interstate Battery System of America. Wales drove a 1936 bobtail Bentley roadster. At the rear, Wales' crew displays the winners' $100,000 check. The nine-day rally covered 3,000 miles.

North America, Europe seen losing ground in rest of century

Decline seen in West's auto share

WASHINGTON. — The North American and European shares of the world automobile market will drop from a total of 67 percent in 1985 to 58 percent by the year 2000, according to a report by the Organization for Economic Cooperation and Development.

Titled Long Term Outlook for the World Automobile Industry, the report expects the fastest growing markets until the end of the century to be Brazil, the Soviet Union, Mexico, the Middle East and Eastern Europe.

By 2000, total world auto production is expected to increase from 35.2 million units in 1985 to 46.6 million units.

Despite the drop in the North American/European share, the number of units produced for those two areas will increase from 23.6 million to 27.0 million during the period, according to the report.

The report also suggests that the recent agreement between General Motors and Toyota for the joint development and construction of a U. S.-built car points the way the auto industry can be expected to evolve in the coming years.

The growing internationalization of the industry is an inevitable response, the report claims, to what is increasingly a unified world market as far as products are concerned.

But the market is also increasingly compartmentalized in terms of the costs and barriers associated with importing or exporting motor vehicles.

Competition will also remain fierce, as demand grows more slowly and the saturation point is reached in most industrialized countries, the report said.

Many manufacturers not only have enormous assets tied up in existing plant and equipment, but are also investing huge sums to modernize and automate their plants to retain competitiveness, the report noted.

AWDA appoints Zuanich executive vice president

KANSAS CITY. — Louis A. Zuanich has been promoted to executive vice president of the Automotive Warehouse Distributors Assn. (AWDA), according to Daniel C. Sussen, AWDA chairman, Sussen, Inc., Cleveland, and Martin Fromm, AWDA president, Kansas City.

Zuanich has served AWDA since 1976 as its director of education and member services, and in his new position will assume some of the operating responsibilities for AWDA. Zuanich is president of Martin Fromm & Associates, Inc., the association management company which provides management services for AWDA.

Ursomarso appointed to turnpike group

HARRISBURG, Pa. — Frank Ursomarso, general manager of Union Park Pontiac, Wilmington, Del., was approved by the State Senate as a new member of the Pennsylvania Turnpike Commission.

Ursomarso, who lives in Chester County, Pa., close to Wilmington, has served as chairman of the state Horse Racing Commission.

Makers build 158,354 cars for week

Downtime at VW, AMC cuts output

By Joe Wilssens
Staff Writer

Downtime at American Motors and Volkswagen of America caused auto assembly totals to slip from normal levels last week.

U. S. auto manufacturers targeted completion of 158,354 units last week, down 2.29 percent from the previous week's 162,068, but 3.63 percent greater than the year-ago-week's 152,810.

The total was low, in part, because Volkswagen concluded 1984 production at its Westmoreland (Pa.) facility June 15 and AMC was idle for the first of two weeks of scheduled vacation at the company's Kenosha (Wis.) plant.

So far this year, the industry has completed 4,104,201 autos, 28.89 percent above 3,184,123 completed during the comparable 1983 period.

Of last week's estimated output, General Motors accounted for 56.54 percent followed by Ford Motor Co., 23.86 percent, Chrysler Corp., 17.71 percent, and Honda, 1.89 percent.

Overtime was slated at 13 facilities last week.

GM led the overtime list with eight plants working extra hours Saturday (June 23). Two Saturday overtime shifts were worked at the company's Detroit, Janesville (Wis.), Lordstown (O.), Oklahoma City and Van Nuys (Calif.) facilities, while Bowling Green (Ky.), Orion (Mich.) and Wentzville (Mo.) scheduled one Saturday overtime shift.

GM's Baltimore, Lansing B-plant and Wilmington (Del.) facilities will remain down for model changeover until August, while the Lansing G-plant began production of the new GM20 car June 18.

Chrysler's Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two daily 9-hour shifts while the Jefferson (Detroit) plant worked two daily 8½-hour shifts.

Dealers, shoppers warned on flood-damaged BMWs

By John Russell
New York Staff Writer

MONTVALE, N. J.—BMW of North America is notifying consumers and its dealers that flood-damaged BMWs are "entering the stream of commerce."

A company spokesman said mailgrams have been sent to all dealers with the serial numbers of the cars. The company also is placing classified ads in the New York Times, the Wall Street Journal, the Los Angeles Times and other publications, saying these cars are considered total losses by the insurance company, Fireman's Fund. The cars span the model range.

Twenty were sold to an unidentified wholesaler, and some have emerged in Memphis.

The cars were damaged in recent flooding at a dealership in New Jersey. Thirty-one cars with a retail value of $680,000 were involved. Eleven were repurchased from the insurance company by the dealer.

BMW submitted a bid to Fireman's Fund to obtain the cars and destroy them. The company's bid was the lowest. BMW said it was not permitted to submit another bid. Instead, the insurance company sold them to the highest bidder. BMW voided the warranties. "Our position is, it is a mistake to have these cars enter the stream of commerce," the BMW spokesman said.

Fireman's Fund Vice President Wallace Kappler in Parsippany, N. J., said BMW was given opportunity to bid on the vehicles and, "they failed to respond effectively." All titles have been marked "flood" as required by New Jersey law, he said.

The BMW spokesman said the insurer's response was a "misstatement of fact," and there were disagreements between the insurance company and BMW.

"We submitted a bid based on the salvage value," and BMW did not intend to profit from the cars, only destroy them, he said. BMW told the insurer the cars should not be sold, he said.

Deal breaks ground

FRANKFORT, Ky. — Crossroads Ford-Lincoln-Mercury here has broken ground for its new dealership, slated to be completed by September. Bill Wingfield is president of the dealership.

Truck production continues high at 65,679 for week

Overtime at four General Motors assembly plants helped domestic truck manufacturers to continue high production levels last week.

U. S. truck makers slated assembly of 65,679 units last week, 2.26 percent better than the prior week's 64,227 and 21.89 percent above the year-ago week's 53,883.

Year-to-date, there have been 1,554,283 trucks built in the U. S., a noteworthy 40.73 percent improvement over 1,104,439 finished at this time last year.

GM was the only company recording overtime with four plants working extra hours. Two Saturday (June 23) overtime shifts were worked at Janesville (Wis.), Lordstown (O.) and Pontiac S-truck plant No. 5, while the Detroit P-plant worked one Saturday overtime shift.

Canada boosts weekly output of cars, trucks

Canadian auto production estimates showed an increase last week and truck manufacturers projected their highest weekly assembly total of the year.

Canadian makers targeted completion of 24,986 cars last week, 5.68 percent greater than the prior week's 23,644 and 13.33 percent higher than the year-ago week's 22,048.

So far this year, the manufacturers have assembled 566,983 autos, 9.99 percent better than the 515,499 finished at this time last year.

Canadian truck manufacturers stepped up production and scheduled 18,146 trucks last week, up 2.42 percent from the previous week's 17,717 and 49.25 percent above the year-ago week's 12,158.

Year-to-date, 418,156 trucks have been built in Canada, 57.05 percent higher than 266,251 completed during the same 1983 period.

Protection is bad for auto makers, economists say

By Helen Kahn
and Geoff Sundstrom

WASHINGTON. — The greatest contribution to the continuing argument over the competitiveness of the domestic auto industry came from academic outsiders during two simultaneous Senate subcommittee hearings last week.

Although spokesmen for General Motors, Ford Motor Co. and Chrysler Corp. went from one hearing to the other, they had nothing new to offer.

Instead, the highlights were a remarkable — and perhaps unique — agreement of a bevy of economists that protectionism was a bad thing and a forthcoming article by a Bookings Institution fellow calling quotas on Japanese cars "stupid policy."

A Senate Foreign Relations subcommittee, chaired by Senator Charles Mathias, Maryland Republican, is midway in a series involving policy for various industries, and a Senate Finance subcommittee, chaired by Senator John C. Danforth, Missouri Republican, honed in on whether the "voluntary" restraint agreement (VRA) on Japanese cars is needed for a fifth year (although the current year will not expire until next April).

Both were essentially wrap-ups. No action is expected on industrial policy or quotas this time around.

As the Big Three came to Capitol Hill and lined up in what is becoming familiar fashion regarding auto trade issues, GM's Vice President and Chief Economist Dr. Maria v.N. Whitman argued against continued restraint on Japanese imports which is interfering with GM's plans to import Suzuki and Isuzu subcompacts.

• Whitman defended GM's import plan, including negotiations with Daewoo Motor Co. of Korea as a source of additional subcompacts for GM dealers, along with GM's joint venture with Toyota for the production of subcompacts in California.

She cited continued GM investment in U. S. car production. Whitman said it was "unmitigated nonsense" to suggest GM is abandoning U. S. small-car production.

Chrysler Executive Vice President for Finance R. S. Miller Jr. restated Chairman Lee Iacocca's offer to "sit down" with the auto industry's major players in an effort to fashion an industrial policy for the industry.

If an industrial policy were agreed to, Chrysler would drop its support of the present quota arrangement on Japanese vehicles, Miller implied.

Miller said Chrysler would agree to hold the line on small-car prices, freeze outsourcing purchases and limit executive bonuses if the government would tackle exchange-rate differences and tax differentials between the U. S. and Japan.

The UAW and Chrysler would also be required to negotiate on work rules and health care costs.

Miller again put forward Iacocca's plan to reduce the federal deficit by raising taxes on imported oil and on gasoline at the pump.

• Ford Vice President Kenneth Whipple told the senators a continuation of the VRA was necessary because of the stability

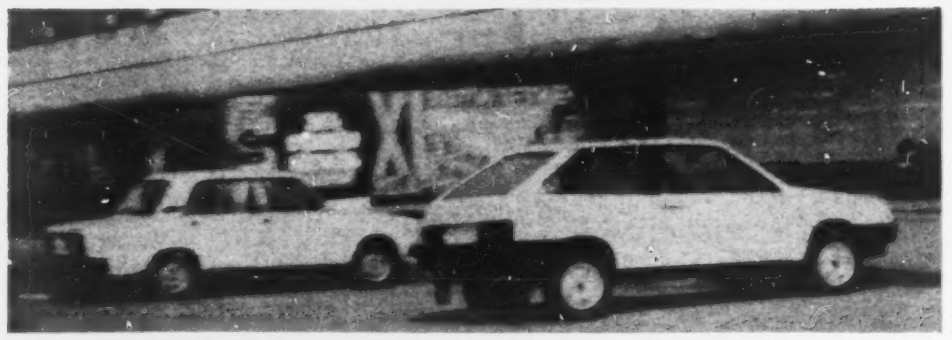
Lada da



A peek at redesigned Lada

Unofficial photo shows new Lada 2108, right, beside a current model. Jointly developed by Lada and Porsche, the 2108 has an overhead-cam four, placed laterally and driving the front wheels through a five-speed transmission. Wheelbase is a bit longer than the current model's 94.5 inches. Estimated weight is 1,870 pounds.

Analysts expect interest rate will move even higher

Hike in prime seen as sales harpoon

By Michelle Krebs
Financial Editor

Auto analysts and car dealers fear a continued rise in the prime lending rate, followed by increases in consumer loan interest rates, may stall car sales.

Major banks boosted their prime rate—the rate charged on short-term, corporate loans — half a percentage point to 13 percent last week, reflecting an increase in their cost of funds and heavier borrowing demands.

It was the fourth increase this year, pushing the prime rate to its highest level since October, 1982.

"This is just what we didn't need. Rates are already too high," said Richard Hoskins, of Hoskins Chevrolet near Chicago. "What we need is a nice, steady climb in the economy."

Hoskins and other dealers surveyed by AUTOMOTIVE NEWS said their customers are more aware of and more sensitive than ever to economic indicators such as the prime rate.

"Cars are expensive . . . If the rate goes up a half percent, (customers) will be paying more," said Hoskins. "And if they think it has risen too much, they'll wait to buy another time."

Analysts agree the latest increase in the prime rate is by no means the last of the year, though they disagree on how high it will go.

They also say the recent increases in the prime rate eventually will catch up to consumer loan rates. Those rates have been hovering in the 13 to 14 percent range but edging up monthly, dealers said.

• Most analysts expected the prime rate to rise but not this soon — not before November's presidential election, said Thomas O'Grady, director of Automotive Market Research and Forecasting Services for Chase Econometrics.

Last week's increase in the prime accelerates his firm's prediction that the U. S. auto industry will sell 300,000 fewer units next year than in 1984.

Chase Econometrics' most recent forecast had called for auto loan interest rates to peak at 15 percent by the third quarter of 1985, and unemployment to hit 8.3 percent by the end of 1985. The Pennsylvania-based forecasting service predicted a 10.4-million sales year for the auto industry in 1984.

However, if auto loan rates jump much above 16 percent, car sales could drop by 800,000 units and changes in buying patterns will occur, O'Grady said.

Baby boomers, entering their peak earning years, will continue to buy sporty models, but the economy will take its greatest toll on smaller cars, O'Grady said. Smaller cars traditionally appeal to younger, less-affluent buyers who are the most sensitive to higher interest rates and are hit hardest by unemployment.

Data Resources, Inc., forecasted a slowdown in car sales for the next quarter more because of inventory shortages than higher interest rates. Nevertheless, higher interest rates will slow the economy, increase un-

Revised sales agreements being signed and returned

Peace breaks out between dealers and Porsche

By John A. Russell
New York Staff Writer

NEW YORK. — The battle between Porsche Cars of North America and its dealers is officially over.

A revised sales agreement has been mailed to 304 dealers in the U. S. who indicated interest. John Cook, president of Porsche Cars, said dealers are signing and returning the agreements.

The company expected 100 to be signed by the end of last week and it is apparent that the battle is officially ended.

Ernie Semersky, chairman of the activist Porsche Dealers Action Committee, told AUTOMOTIVE NEWS the committee sent its final telegram to Porsche dealers. While he said that the agreement "is not perfect," it is comparable with any other sales agreement in the industry.

"We have a franchise," he said, adding that the goals of the committee were met — preserving the franchise system.

Now it is up to every dealer to make his own business decision, Semersky said.

A key part of the franchise agreement is that dealers agree to drop all pending legal actions against both Porsche, and its parent company, Porsche AG, as well as Volkswagen.

The franchise agreements sent to the dealers last week are revised and do eliminate some of the space requirements listed in the initial draft.

Cook said 253 dealers were mailed sales and service agreements and 47 were mailed letters of intent. Letters of intent were

And name game in Detroit heats up

Ford European shuffle incomplete

By Dan McCosh
Detroit Reporter

The more-or-less lateral transfer of Ford Motor Co.'s Robert A. Lutz, 52, from executive vice president — International Automotive Operations to chairman of Ford of Europe still leaves the key post of president of the latter organization unfilled, a sign that all cards have not been dealt in Ford's most recent organizational shuffle.

News Analysis

For the past decade, a relatively orderly transition of management in Ford's European operations has distinguished it from Ford's World Headquarters in Dearborn, where a number of top Ford executives lost their grip scrambling for the top rungs on the corporate ladder.

But during the past year, four of Ford's key international executives have retired or quit. International Operations today is plagued with even more problems in executive transition than World Headquarters.

The abrupt resignation in May of James A. Capolongo, 49, as president of Ford of Europe, which followed the early retirement of Chairman Edward J. Blanch, 58, by just one month, created several unanticipated blank spots in Ford's overseas operations.

Sir Brian Inglis retired in April as head of Ford's Asia-Pacific Operations. Erick Reickert, architect of Ford's overseas sourcing program, left the company early this year to work for Chrysler Corp.

• Ford of Europe accounts for some 30 percent of Ford's automotive revenue, and its alumni include Chairman Philip Caldwell, President Donald E. Petersen and Executive Vice President Harold A. Poling, who heads North American Automotive Operations (NAAO).

The abrupt departure of Lutz —who has been rumored as potential chairmanship material— to shore up Europe's management heats up the name games in Detroit over the likely succession of Ford's top-level management following the anticipated retirement of Chairman Caldwell, who turns 65 next January.

Under the recent realignment, Lutz' former job—executive vice president for International Automotive Operations—has been eliminated. But Ford insiders say this may be a temporary move, necessitated by Lutz' keeping his seat on the board of directors and a corporate executive vice presidency.

Filling the post would only add to the confusion.

Lutz takes over a Ford of Europe management team that includes a number of new arrivals:

Walter Hayes, formerly head of Ford's corporate relations, recently took over as vice chairman. Hayes insists that he is interested only in establishing a department of external affairs, rather than getting involved in operations.

• Gordon B. MacKenzie, 63, took over in sales and marketing in February. Other key Ford of Europe posts are held by William S. Hayden, vice president—manufacturing; Kenneth E. Kohrs, vice president—product development, and Murray L. Reichenstein, vice president—finance.

The unprecedented turnover in Europe means finding a new president — whether from this group or elsewhere in the corporation—and setting up a line of transition is one of Lutz' first orders of business.

"Caldwell is the type that says if you mess something up, you go fix it," says one source close to the situation—a reference to frequent reports that a personality conflict between Capolongo and Lutz precipitated Capolongo's resignation.

Despite the frequent description of Ford's European operation as "troubled," Ford executives insist that it still is more profitable than those of its competitors. Its admitted soft spot is fleet sales in the UK, where the radically styled Sierra has not been acceptable to corporate buyers.

Ford's record penetration of 12.6 percent in Europe last year nearly captured the first-place slot for the first time.

• But Ford today is facing much stronger competition in a market where six manufacturers stay within a percentage point of penetration of each other, and General Motors has been making rapid gains. With an auto market not yet recovered from the last recession, Europe is not contributing to Ford's profits as it once was.

Concurrently, Ford is becoming much more dependent on its overseas operations for new products in the U.S. At least three new cars will be coming from Europe to be sold under the new Merkur franchise in the U.S., and Mazda will be doing most of Ford's new small-car work through a variety of joint ventures.

"Fixing" Ford's organizational problems overseas thus becomes even more critical.

While most of the attention has been on Europe, Ford also realigned its Asia sphere. The restructuring leaves Ford overseas with an assymetrical two-way split: Ford of Europe and a consolidated Latin American and Asia-Pacific operation.

Lutz' counterpart, running the newly consolidated Latin American and Asia-Pacific operations is L. Lindsey Halstead, 53, formerly vice president — Latin American Operations, now reporting directly to Petersen.

On paper, Halstead and Lutz appear organizational equals, but Lutz' position obviously is enhanced by his title and board seat.

• Halstead's broadened responsibilities were not accompanied by the appointment of anyone to directly supervise Latin America, a geographic region that includes the troubled Argentinian operations, volatile South Africa and the Mideast—but excludes Central America and Mexico, which today are under the aegis of Ford's NAAO.

Alexander J. Trotman, 50, who remains in his job as head of Asia-Pacific, now reports to Halstead rather than Lutz. Trotman succeeded Inglis at the Asia-Pacific job only three months ago. John T. Eby remains president of Ford of Japan, while Inglis continues to sit on the board of directors of Mazda Motors Corp., Ford's Japanese partner and cornerstone of its plans in Asia-Pacific and North America.

The latest moves in Europe may signal a growing autonomy for that operation, contrasting with Ford's embracing Mexico and Japan as an adjunct to its North American sourcing plans.

Also likely is a weakening of the often-traversed "bridge" between Europe and U.S. executive ladders — with Europe's thinning ranks demanding immediate attention, rather than serving as an executive bullpen as it had in the past.

Upsizing the downsized Cadillac

Marquis Custom Coach, Canoga Park, Calif., took Cadillac's downsized DeVille and stretched it five feet—enough to make its '85 Marquis Royale Coach longer than the rear-drive '84 Cadillac limousine. The Marquis limo includes color TV, walnut beverage console with crystal service, moonroof, intercom, divider window and load-leveling controls. Price is about $45,000.

German auto strike reaches compromise

FRANKFURT, West Germany.—The West German auto industry looks to be heading for a shorter working week — but not the 35 hours which became the battle cry of the IG Metall union members.

A complex compromise based on a 38.5-hour working week has been accepted in principle by both sides in the arbitration panel headed by Georg Leber.

At the end of last week (June 25-29) employers belonging to Gesamtmetall and workers belonging to IG Metall were seeking approval from their members. However, it looked as though union members might reject the compromise.

Should the strike be settled, cranking up to full production could take up to a week. The seven-week strike, over the issue of a reduction in the 40-hour week, has made 450,000 auto workers idle and cost the companies an estimated loss in production of up to $2 billion by value.

Technically, the arbitration worked out at Ludwigsburg, near Stuttgart, covers only North Baden-Wurttemburg, home of Daimler-Benz, Bosch and other key component suppliers. In practice, it is likely to be accepted by both sides in Hesse, where Opel is located.

Other states are not directly involved, but the block on vital components from Baden-Wurttemburg and Hesse paralyzed almost the whole of the country's auto industry.

If it is given the go-ahead, the 38.5-hour week will begin April 1 next year and run to the end of September, 1986. Up to that period employes will receive an additional pay increase of 3.3 percent plus an additional $90 to cover the period from January this year, when the previous contract expired.

When the shorter week comes into effect, pay will rise by 2 percent.

April total of 836,717 is highest since 1979

Month's registrations rise 14 pct.

By Jenny L. King
Staff Writer

The total of domestic and imported new cars registered in April was the highest for that month in five years and climbed 14.87 percent above the year-ago sum.

Figures compiled by R. L. Polk & Co. showed an April total of 836,717 registrations compared with 728,409 a year earlier. March, 1984, registrations reached 835,311, a difference of plus 0.17 percent in favor of April.

It was the best accounting for an April since 1979 when registrations totaled 955,807. The April record was set in 1973: 968,700.

Domestic registrations were up 22.11 percent April to April, and were up 1.99 percent compared with March of this year. Domestics numbered 649,163 this April, 531,620 for the month a year earlier and 636,509 the preceding month.

Imports plunged 4.60 percentage points in market penetration during the month, stopping

Chrysler names Lee to Los Angeles post

LOS ANGELES.—Thomas E. Lee has been named assistant Los Angeles zone sales manager for Chrysler Corp. He formerly was assistant zone sales manager in Portland, Ore.

Lee replaces Paul L. Berrigan Jr., who has been transferred to Detroit to coordinate the launch of a new electronic communication program between Chrysler headquarters and the field sales force.

April total of 836,717 is highest since 1979

Month's registrations rise 14 pct.

Continued from Page 3

at 22.42 percent compared with 27.02 percent a year earlier. Their year-to-date share dropped to 24.23 percent from 28.83 percent.

In the total marketplace, General Motors and Ford Motor Co. picked up more than six percentage points between them, as Chrysler's share diminished, American Motors was down and the imports caved in.

• GM passenger cars accounted for 47.09 percent of the April market, up from 44.15 percent a year earlier. Ford climbed to 19.64 percent from 16.08 percent. Chrysler slipped to 9.19 percent from 10.47 percent, AMC skidded to 1.66 percent from 2.28 percent and imports stopped at 22.42 percent, down from 27.02 percent.

Excluding imports, GM had 60.70 percent of the market, Ford had 25.32 percent, Chrysler had 11.85 percent and AMC had 2.13 percent. Miscellaneous domestics, once principally Checker cars and adding to a respectable number, dropped out of sight, the 18 units accounting for no percent.

With imports claiming 22.42 percent of the total market in May, the remaining segments according to market class were: Intermediates, 27.95 percent; compacts, 18.05 percent; subcompacts, 12.47 percent; standards, 10.85 percent, and luxury models, 8.26 percent.

The market class breakdown without imports included: 36.02 percent intermediates; 23.27 percent compacts; 16.68 percent subcompacts; 13.98 percent standards, and 10.65 percent luxury cars.

For the comparable month of 1983, the breakout for the total market was imports at 27.02 percent; intermediates at 25.96 percent, compacts at 16.18 percent, subcompacts at 11.53 percent; standards at 13.86 percent and luxury cars at 5.45 percent.

Registrations for the first four months of 1984 reached 3,201,586, up 22.33 percent from 2,617,277 last year. Two years ago, the total was 2,352,822 for January through April.

Domestic registrations of 2,425,902 were up 30.24 percent from 1,862,708 in 1983 and up 45.41 percent from 1,668,348 in 1982.

GM and Ford increased their penetration of the total market for the first four months. GM was up 3.04 percentage points, to 45.52 percent from 42.48 percent, and Ford gained 2.65 percentage points, going to 19.16 percent from 16.51 percent.

Imports skidded 4.60 percentage points, to a market penetration of 24.23 percent from 28.83 percent. Chrysler dropped to 9.19 percent from 9.65 percent and AMC was down to 1.90 percent from 2.52 percent a year earlier. Miscellaneous domestics had no share this year and 0.01 percent in 1983.

Among exclusively domestic registrations, GM earned 60.08 percent of the four-month market, up from 59.69 percent a year earlier. Ford grew to 25.28 percent from 23.19 percent. Chrysler dropped to 12.13 percent from 13.56 percent and AMC was down to 2.51 percent from 3.54 percent. Miscellaneous domestics disappeared, to 0.00 percent from 0.02 percent in 1983.

Officer gets an Escort

The Central Florida Auto Dealers Assn. presented officer Jim Bishop with a 1984 Ford Escort for his use as staff administrator of Central Florida Crimeline Crop., Inc. Shown above, from left, are: Dick Smith, president, McInerney Ford; George Nahas, Central Florida Auto Show chairman; Jim Boebinger, president of the dealer group, and Bishop.

Inspection law given new life in New Jersey

TRENTON, N. J. — Gov. Thomas H. Kean has signed legislation extending the state's law on car inspections. For two more years, motorists have the option of having their cars inspected at state centers for free or at private garages for a fee.

The extension was a compromise by Kean, whose administration had urged the continuation of the private system.

The governor asked for a $4 million to $5 million appropriation starting the July 1 fiscal year to begin a four-year expansion of the program. The money will be used to build new state centers, hire more inspectors and add lanes to existing stations.

The experimental dual-inspection system, initiated last November, was to expire in June. The state has 3,869 state-licensed garages and 37 inspection centers for its 5.5 million licensed drivers.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. New York and Oklahoma 1984 registrations compiled from manufacturers' sales records. Oklahoma 1983 figures not available. Current Utah registrations temporarily delayed.

Total tops 259,000

Mid-month car sales highest listed since '78

By Jenny L. King
Staff Writer

Mid-June domestic new-car sales climbed to the highest total since the boom year of 1978. The numbers put the U.S. industry back on a winning track after its first 1984 period decline the preceding 10 days.

An extra selling day this year compared with 1983 helped bring the total up 26.48 percent, to 259,844 from 205,444. The daily selling rate, based on nine days, averaged 28,872, up 12.42 percent from 25,681 for eight days in 1983.

The 259,844 total was best for mid-June since 1978 when 310,320 new passenger cars were delivered to retail customers. Record for the period is 311,044, set in 1973.

In a direct comparison, all six major U.S. auto makers had sales gains in the period; on a daily-rate basis, two were behind last year.

General Motors reported sales of 153,412 domestic cars June 11-20, up 26.13 percent from 121,629 in 1983. (GM sales were up 12.03 percent on a daily-rate basis.) Ford Motor Co. sales were up 27.89 percent, to 63,306 from 49,502 (up 13.82 percent daily rate). Chrysler Corp. sales of 32,442 were up 24.34 percent from 26,091 (up 10.55 percent daily rate).

Sales of 4,625 reported as a 10-day estimate by American Motors were up 3.93 percent from the year-ago 4,450 estimate but were down 7.55 percent computed on a daily-rate basis. Volkswagen dealers retailed 2,439 new Rabbits during the period, up 8.64 percent from 2,245 (off 3.56 percent daily rate). Honda more than doubled its year-ago total, climbing 137.07 percent to 3,620 from 1,527 (up 110.47 daily rate).

GM's share of the market slipped to 59.04 percent from 59.20 percent. Ford pushed ahead to 24.36 percent from 24.10 percent. Chrysler had 12.49 percent this year compared with 12.70 percent in 1983. AMC dropped to 1.78 percent from 2.17 percent, VW was down to 0.94 percent from 1.09 percent and Honda grew to 1.39 percent from 0.74 percent.

AMC was the only domestic make to fall short of year-ago sales during the period. With its inventory reduced to only the Eagle nameplate, AMC sales tumbled 68.52 percent. Renault was up 35.48 percent.

At Chrysler Corp., Plymouth was up 22.92 percent, Chrysler was up 34.64 percent and Dodge was up 18.61 percent. Ford sales were up 13.35 percent, Mercury was up 53.43 percent and Lincoln more than doubled its year-ago total, up 132.11 percent.

Buick was up 71.94 percent, Cadillac was up 52.04 percent, Chevrolet was up 8.39 percent, Oldsmobile was up 17.91 percent and Pontiac was up 46.01 percent.

Chevrolet nameplates grabbed the top two spots in sales for the period, with the compact Cavalier in first place at 13,368, followed by Celebrity at 11,144. Ford Escort was third at 10,993, then came Oldsmobile Cutlass Supreme at 10,585 and Oldsmobile 88 at 10,124.

Year-to-date sales were up 28.64 percent, to 3,965,306 from 3,082,509.

Wilkinson signs for Wisconsin deal

Ray Wilkinson Jr., seated, signs papers establishing Ray Wilkinson Buick-Cadillac, Inc., Racine, Wis. Witnessing are Ray Gordon, left, Buick's Milwaukee zone manager, and Bob Hansen, Buick district manager. Wilkinson bought out Buick's former Racine dealer, Bob Allen, and became a dual dealer.

For used-car dealers

FTC may drop 'known defect' rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Dropping the requirement that used-car dealers inform buyers of "known defects" has been recommended to the FTC by the agency's Bureau of Consumer Protection, its Bureau of Economics and the staff attorneys engaged in writing the rule.

On July 10, the commission is expected to approve a final rule focused on warranty disclosure by a 3-2 vote. NADA and the American Car Rental Assn.—both of which are still in court in the Second Circuit—are likely to welcome it as the best possible solution.

To no one's great surprise, FTC staff has recommended precisely what FTC Chairman James C. Miller III suggested as the correct solution. This occured after Congress — watered generously by NADA political contributions — overturned the original FTC rule.

But the U.S. Supreme Court, more than a year later, found Congress' action unconstitutional and thus reinstated the rule which said used-car dealers could tell the buyer about "known" defects although inspection was not required. The rule also allowed the option of "as is" sales.

By that time, NADA, the National Independent Automobile Dealers Assn. (NIADA) and the American Car Rental Assn. went to court. NIADA, however, dropped out and the only current litigation by the two remaining plaintiffs is in the Second Circuit in New York. That case has been in abeyance—first deferring to Congress' attention and then on remand to the FTC which has asked for an additional extension to Sept. 14.

The fate of that litigation is still uncertain and depends in part on some small but major changes NADA feels are needed.

NADA Executive Vice President Frank McCarthy said: "NADA believes that no rule requiring used-car stickers is necessary based on the record produced in the FTC rulemaking on this subject. However, we are pleased to note that the FTC staff reports do recommend the deletion of the 'known defect' provision which was included in earlier proposals.

"That provision was unworkable, would have created costs that far outweigh any benefits and would have confused consumers rather than informed them. The proposed rule does provide for warranty disclosure and also creates some questions, particularly regarding warranty and service contract terms which will need to be addressed by the commission when it considers this proposal.

"This would be a matter of clarification so that a dealer's liability is not inadvertently increased nor the customer confused. Dealers have always supported full and clear disclosure of warranty and service contract terms so that all parties understand their responsibilities and so that consumers can make informed comparisons when shopping for used cars," McCarthy said.

Even though NADA refuses to speculate on approval by the full commission, the proposed final rule is a far cry from the first proposal which would have required a full inspection and complete reporting on an extensive sticker.

While NADA objects in principle to any regulation, its main target was the "known defect" provision. And, in fact, NADA was so sure that the Miller proposal for warranty disclosure only would occur, the association in 1982 put into effect its voluntary system that is almost identical to what is being recommended as the final rule.

• The newly proposed window sticker—called Buyer's Guide—now on its way to final approval contains: A warning that spoken promises are hard to enforce and a suggestion to get all promises in writing; a statement of any warranty offered; a prominent statement of whether the sale is "as is" and if so, then the buyer must pay for any needed repairs after purchase, and a suggestion that the buyer ask the dealer whether an independent mechanic may inspect the car.

It retains on the other side a list of problem areas to think about.

NADA's voluntary program—on a window sticker headed "Buyer's Guide"—includes such data as a right to pre-purchase inspection by an independent mechanic, a statement that the car is sold "as is" or with a limited warranty, a statement on the availability of a service contract, a warning that the buyer should get all promises in writing, plus a statement that the dealer abides by the NADA Code of Business Ethics. The last is the only real difference from the newly proposed FTC rule except that NADA's is voluntary.

FTC staff said NADA said 36 state associations have the NADA program "operational" and another 10 have committed to participate but all are being delayed pending FTC and court resolution of the rule.

In effect, FTC is about to mandate the NADA voluntary program.

In a lengthy press conference, FTC officials explained their rationale for dropping the "known defect" provision and sticking with FTC's emphasis on displaying warranty provisions although they are already contained in the sales contract.

They said it was far better for buyers to know who is going to do the post-sale repairs. And if major defects show up, buyers can sue the state courts if they realize their rights under the implied warranty of merchantibility have been breached by the dealer.

FBI launches a DeLorean jury probe

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — A jury-tampering probe was launched last week by the FBI after it was learned that jurors in the DeLorean drug trafficking case had received copies of a Congressional report critical of undercover government "sting" operations.

The report, issued by U.S. Rep. Don Edwards, California Democrat, was mailed to 13 persons in the Los Angeles area, including seven members of the jury hearing the cocaine conspiracy case involving the former auto maker.

According to Edwards his staff received a letter in June from someone in San Francisco asking that the report be sent to 13 persons in Soutehern California. The report has been circulated among Edwards' constituency in the Bay Area. That letter has been turned over to the FBI and sources indicated the name on the letter appears to be fictitious.

Judge Robert M. Takasugi asked jurors individually if they had received the report. Seven reported getting the document, but only four said they had looked through it. The four were questioned individually in the judge's chambers on whether the report would affect their attitude toward the case. They later returned to court and the trial resumed with defense attorneys continuing their questioning of John Valestra, an undercover agent involved in the sting operation.

• What had shaken attorneys in the case is the fact that the identities of the jurors have been kept secret from the press and public. While both prosecution and defense witnesses have access to the jurors names and hometowns, they do not have the individuals' addresses.

The defense quickly denied that it had a hand in sending the report to the jurors, although DeLorean and his attorneys are quite familiar with the document released by Edwards in May.

It is uncertain how this latest development will affect the case, which is continuing at a slow pace.

The defense said it will not seek a mistrial and feels that it is making a good showing against the government's case. The prosecution declined to comment on the incident.

In an unrelated incident last week, Cynthia Lee Brady, 30, described as a secretary and parttime housekeeper at DeLorean's New Jersey estate, was arrested on cocaine charges in Clinton Township, N. J.

Howard Weitzman, DeLorean's defense attorney, called the arrest "just too coincidental."

According to officials of the Tri-County Multiagency Drug Task Force, maids at the Fountain Motel in Clinton discovered drug paraphernalia while cleaning a room. Officers staked out the room and arrested Brady when she returned as well as three others who appeared later.

She was charged with possession of a half ounce of cocaine and conspiracy to distribute the drug.

Car production is 2,071,062 for period

2nd-quarter output best since 1979

By Joe Wilssens
Staff Writer

Domestic auto manufacturers posted their best second-quarter production total in five years.

U.S. auto makers projected completion of 2,071,062 units for the second three-month period of 1984, 15.17 percent greater than 1,798,293 built last year and the best build for the period since 2,485,124 were finished during the second quarter of 1979.

For June, the industry expected to finish 667,389 cars, 2.17 percent ahead of 653,151 units asembled during the year-ago month. It is the highest output for the month since 712,524 were finished in 1981.

As was the case the previous week, downtime last week at American Motors and Volkswagen of America caused auto assembly totals to slip. The total of 156,276 was 0.99 percent short of the output of 157,850 of the prior week but was 14.73 percent higher than the year-ago week's 136,212.

This week's domestic auto production will decline still more as Ford Motor Co. begins a vacation shutdown today (July 2). It will mark the first time that Ford has halted production throughout the company since 1979, a Ford spokesperson said. Workers are slated to return July 16.

In addition, the July holiday will reduce this week's output.

So far this year, 4,259,973 cars have been completed in the U.S., 28.29 percent greater than 3,320,406 assembled at this time last year.

Of last week's estimated car production in the U.S., General Motors accounted for 58.36 percent followed by Ford, 23.30 percent; Chrysler Corp., 16.42 percent, and Honda, 1.92 percent. VWoA recently built out its 1984 production while AMC was idle for the second of two scheduled weeks of vacation.

Eleven assembly facilities worked overtime last week.

GM led the list with six plants posting extra hours. The company's Arlington (Tex.), Detroit, Doraville (Ga.), Fairfax (Kans.), Flint and Lordstown (O.) facilities worked Saturday (June 30) overtime.

Chrysler Corp. completed the overtime list with all five of its auto plants recording extra hours. Chrysler's Belvidere (Ill.), Newark (Del.) and St. Louis plants No. 1 and No. 2 worked two nine-hour daily shifts last week while Jefferson (Detroit) worked two 8½-hour daily shifts. Newark and both St. Louis plants also worked Saturday.

Buick was the only GM division to begin releasing production totals for the GM20 car assembled at the company's Lansing plant. Eight Buick Somerset Regals were finished during the first week of production and 175 were finished last week. Oldsmobile and Pontiac did not release figures on the Calais and Grand Am, respectively.

Canadian truck output best ever; cars at 6-year high

Canadian auto manufacturers wrapped up second-quarter production for 1984 with their best total in six years while Canadian truck builders finished the quarter with their best output ever.

Canadian auto makers assembled 305,304 cars during the second three-month period of 1984, up 3.21 percent from 295,799 assembled during the same period last year. This year's tally is the best build since 328,270 cars were finished in the second quarter of 1978.

The industry estimated completion of 100,289 cars during June, down 68 units from the 1983 total of 100,357 for June.

Auto manufacturers targeted production of 20,519 units last week, down 21.18 percent from the previous week's 26,034 but 14.84 percent greater than the year-ago week's 17,867. The total for the week was low, in part because American Motors' Brampton (Ont.) facility closed for the first of four weeks of scheduled vacation and General Motors' Oshawa plant returned to normal production following four weeks of Saturday overtime.

So far this year, the manufacturers have finished 588,550 autos, 10.38 percent higher than 533,201 assembled at this time last year.

Truck makers project assembly of 73,545 units during June, the best total ever recorded for the month. The 1984 build for the month was 36.33 percent higher than 53,948 finished during the year-ago month.

The industry turned out 15,582 trucks last week, down 17.35 percent from the record weekly truck build of 18,853 the previous week. Last week's output was 70.39 percent above the year-ago week's 9,145.

Year-to-date, 434,445 trucks have been assembled in Canada, 58.01 percent better than 274,942 finished during the same 1983 period.

International Harvester closed its Chatham (Ont.) and Vancouver (B.C.) facilities June 29 for two weeks of scheduled vacations. Both are scheduled to resume production July 16.

Likewise, American Motors was idle for the first of four weeks of summer vacation at its Brampton (Ont.) site.

Volvo's Halifax (N.S.) plant stepped up production last week by 24 units to make up for the Tall Ships holiday-shortened production of the previous week.

Chrysler Corp. estimated production of 1,963 Dodge Caravans, 1,955 Plymouth Voyagers and 782 Mini Ram Vans at its Windsor (Ont.) facility last week bringing the year-to-date T-115 total to 115,647.

Truck production at 5-year high for 2nd quarter

Following an impressive first quarter, domestic truck manufacturers concluded second-quarter production last week with their best output for the period in five years.

U.S. truck makers projected completion of 815,002 units for the second three-month period, 29.11 percent better than 631,255 built last year. The build for the quarter was the best since 887,948 were finished during the same 1979 period.

The makers expected to complete 273,998 trucks during June, 17.15 percent higher than 233,883 built during the same month last year. The 1984 total was the best for June since 292,897 in 1979.

Truck manufacturers slated assembly of 65,643 units last week, down 1.78 percent from the previous week's 66,834 but 40.88 percent better than the year-ago week's 46,595.

Year-to-date, 1,621,081 trucks have been built in the U.S., 40.79 percent greater than 1,151,389 finished during the same 1983 period.

Overtime was scheduled at three assembly plants last week. General Motors accounted for all three. The company's Detroit and Lordstown (O.) plants and Pontiac plant No. 6 worked Saturday (June 30) overtime.

Reagan visits GM Orion plant

GM Chairman Roger B. Smith welcomes President Reagan during a ceremony to dedicate GM's new assembly plant in Orion Township, Mich. The plant, which opened in December, represents "a new spirit of cooperation" between management and labor, the President said.

Crews cheer Reagan on his GM plant visit

By Michelle Krebs
Financial Editor

ORION TOWNSHIP, Mich.—President Reagan received a rousing reception from workers at General Motors' Orion Township assembly plant last week, a reception that must have caused UAW and Democratic Party leaders to cringe.

Mr. Reagan, the guest of honor for the dedication of GM's new assembly facility, was greeted by 1,500 workers sporting blue and white GM caps and waving American flags.

Only a handful wore the Walter Mondale buttons and UAW hats distributed by the union before the President's arrival. The union has endorsed Mondale. Many of the workers who were interviewed said they voted for Mr. Reagan in 1980 and would do so again in November.

The President's speech, praising union members for coming through when the chips were down, was interrupted repeatedly by applause and cheers from the workers.

"I would like to take this opportunity to congratulate the UAW and the entire American labor movement," he told the workers and the crowd of bipartisan state and local government officials. "During these last few years of severe economic stress, organized labor has played a responsible and constructive role in rebuilding American industry.

"I think your plant symbolizes a new spirit of cooperation between management and labor," he added. "That cooperation reflects the determination of this industry not just to survive, but to triumph. And we know that the UAW puts its full support behind this endeavor."

As labor negotiations between the union and GM approach, Mr. Reagan urged continued cooperation between labor and management: "If we Americans keep working together to improve quality, keep investing in America's technology to become more productive and hold down costs, then, yes, we can outcompete, outperform and outsell the pants off anybody, anywhere in the world."

In addition to praising labor as a group, the President singled out the community accomplishments of individual union members — a production technician in tail-light assembly who is a United Way volunteer; an employe who works with youths in Junior Achievement and counsels former prisoners.

Though Mr. Reagan's trip to Michigan was billed as official White House business and paid for by tax dollars, it didn't prevent him from putting in a political plug for his Administration's accomplishments and blasting his opponents.

"They were wrong when they said inflation and interest rates couldn't come down; wrong when they said recovery wouldn't come; wrong when they said the expansion couldn't last — and I think if

First-half car sales best since 1979; total passes last year by 20.4 pct. but import market share is sliced

By Jenny L. King
Staff Writer

U. S. auto makers finished the first half of the 1984 calendar year with an almost unblemished chart of sales gains, combining efforts for a total 27.33 percent ahead of the first six months of 1983.

Of the 18 reporting periods, domestic sales were up in all but one. Increases ranged from 8.57 percent in mid-May to 74.49 percent the second February period. The first half total of 4,246,343 was close to a million units above 3,335,028 a year earlier and was best for the half since 1979 when 4,446,176 retail deliveries were reported.

The only domestic sales decline for a 10-day period so far this year was the 11.15-percent drop June 1-10.

Imports, beleaguered by restrictions on Japanese-built cars and the recent month-long strike in Germany which halted new-car production, kept their heads just above water—up 1.40 percent the first half, to 1,230,500 from 1,213,491.

Their share of the market dived to 22.47 percent from 26.69 percent in 1983.

Industrywide sales were up 20.41 percent, to 5,476,843 from 4,548,519 last year.

Ford Motor Co. showed the strongest recovery of the Big Three in the first half of 1984. Ford sales were up 33.09 percent, to 1,009,186 from 758,263. General Motors dealers reported

Tables on Page 67.

sales of 2,518,156 new passenger cars, up 26.97 percent from 1,983,327 a year earlier. Chrysler Corp. sales were up 18.57 percent, to 513,174 from 432,814.

Of the Little Three, Honda fared best, its sales up 289.48 percent the first half, to 65,670 from 16,861. American Motors dipped 4.81 percent, to 96,256 from 101,120, and Volkswagen squeezed by '83, with sales of 43,901 compared with 42,643.

GM earned 59.30 percent of the first-half domestic market, down from 59.47 percent a year ago. Ford claimed 23.77 percent, up from 22.74 percent. Chrysler dipped to 12.08 percent from 12.98 percent. AMC was down to 2.27 percent from 3.03 percent; VW dropped to 1.03 percent from 1.28 percent, and Honda earned 1.55 percent compared with 0.50 percent in 1983.

AMC's 64.77-percent sales decline made it the only domestic on the minus side. Renault was up 20.90 percent for the first half.

At Chrysler Corp., Plymouth was up 8.74 percent, Chrysler

Ford, GM fail on '83 CAFE

By Jake Kelderman
Washington Reporter

WASHINGTON. — General Motors and Ford Motor Co. head the list of major auto makers failing to meet the Federal Government's requirement for fuel efficiency in 1983.

GM, with a corporate average fuel economy (CAFE) of 23.5 MPG, missed the 1983 standard of 26 MPG by 2.5 MPG and Ford, with a CAFE of 23.8 MPG, missed by 2.2 MPG.

Both companies have said that they will miss the standards for 1984 and 1985 because of increased "big car" sales.

Under the law establishing the CAFE requirements, both companies could be subjected to fines of $5 per one-tenth of a

Table on Page 66.

mile per gallon, per vehicle, for having failed to meet the standard, but that is avoided by another provision of the law which allows the companies to carry forward any credits they may have received for exceeding the standards in previous years.

Both Ford and GM exceeded the CAFE standards in 1980-1982.

Chrysler Corp., as it has every year, again exceeded the CAFE requirement for 1983 (pending final confirmation, its 1983 level will be 27 MPG) and American

breaking news

Hartzell heads Nissan service; Dorsett retires

CARSON, Calif.—Richard T. Hartzell has been appointed service vice president for Nissan Motor Corp. in U. S. A. He succeeds Blaine Dorsett, who has retired. Hartzell has been Pontiac general service manager since 1983 and before that served in Pontiac's engineering department.

German auto industry returning to work

FRANKFURT.—The auto industry in the Federal Republic here began getting into gear once more last week (July 2-6). This followed acceptance by members of the IG Metall union of the peace formula proposed by arbitration. The strike lasted seven weeks, and halted most of the country's vehicle industry.

Firestone account moves to Toronto agency

AKRON.—Firestone Tire & Rubber Co. has switched its $20 million advertising account from BBDO, New York, to Saffer, Cravit & Freedman, Toronto, the Firestone of Canada agency for the past two years. The move is designed to redirect Firestone's advertising to emphasize retail activity for Firestone-owned stores and retail stores. Saffer specializes in retail advertising.

Mustang as super-sport

Made by Ghia in Turin

The Ghia Vignale Mustang is a concept aerodynamic four-wheel-drive specialty car, built on a Mustang SVO platform by Ford Motor Co.'s Ghia Studio in Turin, Italy. The three-door, four-seater has flush glass, a contoured windshield with a single wiper, low-profile aerodynamic headlamps and a partial belly pan. Story on Page 18.

Solid profits could turn to losses

Industry is vulnerable, Commerce Dept. says

By Jake Kelderman
Washington Reporter

WASHINGTON. — President Reagan went to Detroit last week to sing the praises of the domestic auto industry, but back in Washington, meanwhile, his advisors see an industry still very vulnerable.

According to Commerce Department analysts, the industry could easily slip back into a new round of plant closings, job layoffs and losses should sales turn down in the next two or three years as some forecasters fear they might.

In a recent briefing to the Cabinet Council on Commerce and Trade, papers of which AUTOMOTIVE NEWS has obtained, the analysts said U. S. auto makers should earn $9 to $10 billion this year on sales of 10.4 million new cars and 3.2 to 3.4 million light trucks and increase employment by 40,000 to 774,000 workers, but that even with this impressive increase in profitability, "the industry still faces difficult problems in 1984 and beyond."

"The 1980-82 recession so weakened corporate balance sheets that more than two years of healthy profits will be needed to reduce debt and increase working capital," they told the committee members, who had gathered to discuss administration efforts regarding domestic content legislation.

Converting 1983 profits of $6.15 billion to constant 1972 dollars, the analysts said that earnings for the first profitable year since the recession would still be far below 1977 earnings when measured on the same basis ($2.85 billion vs. $3.67 billion), and that in spite of the excellent return on sales in 1983 of 4.54 percent vs. 4.76 percent in 1977, the performance was not sufficient to restore the damage done during the 1980-1982 period. Indeed, said the analysts, the industry average return on

Table on Page 66.

sales for 1980-1983 was just 0.4 percent.

The analysts also noted that the ratio of current assets to current liabilities is still far from returning to pre-1980 levels (in 1983 it had reached 1.19 after having sagged to 1.01 in 1982; in 1973 it stood at 1.55) and the working capital at the end of 1983 ($5.7 billion) was less than half of the $12.3 billion on hand in 1978. Furthermore, some of that working capital had come at the expense of reclassified short-term debt and restructured pension obligations, the analysts said.

The increased liquidity of the car companies has, however, led to one improved situation, the analysts told the committee, an enhanced ability to respond to sudden changes in the market. Measured in terms of how well current liabilities could be covered by cash and cash equivalents and expressed as the "quick ratio," this measurement of industry health is the one closest to the 1978 level, analysts said. It rose to 0.70 at the end of 1983 after dropping from 0.73 in 1978 to 0.42 in 1981.

• The long-term debt-to-equity ratio, meanwhile, is still twice the level it was in 1978, the analysts said, and now contains debt acquired at high interest rates which understate its true effect (0.11 in 1978 vs. 0.24 at the end of 1983).

The analysts warned that the administration must vigorously oppose domestic content legislation if the U. S. industry is to

Iacocca lights torch for Liberty

NEW YORK. — Lee A. Iacocca, chairman of Chrysler Corp. and a son of Italian immigrants, lighted a plastic model of the Statue of Liberty's torch which will burn at the statue's base until a new one tops the statue.

In ceremonies on Ellis Island, New York Mayor Ed Koch said, "I like to think Lee Iacocca got his start repairing Chrysler and he worked his way up to the Statue of Liberty."

13 million visit GM at Epcot Center

Some 13 million people have visited General Motors' World of Motion exhibit at Epcot Center, Lake Buena Vista, Fla. They've made a display of GM's latest cars and trucks a popular spot in the pavilion. Climbing in and out for photos, slamming doors and kicking tires, they wear out the interiors in six weeks. Then the cars are replaced.

Millions in U. S. grants sought by Chrysler

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Chrysler Corp. is in the preliminary stages of seeking as much as $15 million in federal grants to expand its Warren (Mich.) truck assembly plant.

The city of Warren is preparing an environmental impact study on the Chrysler proposal. It will be submitted for review by the Department of Housing and Urban Development. A Chrysler spokesman said the actual grant application will be filed by Detroit.

Chrysler is estimating the total cost of its project at $500 million. This would include the rehabilitation of the Warren facility, plus the addition of a 700,000-square-foot paint shop.

The paint shop will be on part of a 47-acre plot purchased by Chrysler from Jones and Laughlin Steel Corp.

The recently purchased land is contiguous to the present Chrysler facility and is reported to be intended for "just-in-time" inventory needs. Construction will require the demolition of a foundry.

• HUD officials in Michigan said Warren does not qualify for the Urban Development Action Grant (UDAG) being sought by Chrysler, but that neighboring Detroit is recognized as a distressed community eligible for the federal dollars.

Besides the UDAG money, Chrysler may also receive money — if approved — from a Community Development Block Grant, also administered by HUD, and funds from the Federal Highway Administration, according to a HUD notice.

Warren is allowed to receive money for the plant through Detroit because an estimated 50 percent of the Chrysler plant's workforce resides in Detroit. Detroit's application will argue that the expansion of the Warren facility will greatly aid the Detroit economy.

The HUD notice said Chrysler has indicated that without grant approval, the company may rehabilitate the Jones and Laughlin foundry to use as a paint shop, or it could invest in another location.

HUD will hold a public meeting on the plant proposal at the Warren City Hall July 11.

GM to spend $1 billion on Canadian facilities

By Marjorie Sorge
Labor Editor

General Motors of Canada has announced a $1 billion investment in its Oshawa, (Ont.) operations over the next three years.

The investment includes a $556 million expansion of the truck plant and a $226 million modernization of the metal stamping plant.

Another $220 million will be spent to expand the powerhouse and electrical equipment, to increase capacity and improve production in other areas including one of the car assembly plants and to install a new base coat/clear coat paint facility.

Construction on the two major projects will begin immediatey and is expected to be completed in 1987.

The truck operation will be expanded by 750,000 square feet, resulting in an all new assembly plant, the company said. It will be ready for 1987-model production.

"We will be taking giant steps forward here, creating a new assembly process that will indeed be a factory of the future," said John F. Smith Jr., GM of Canada general manager and president. "Everything installed in this new facility will be on the leading edge of technology as we approach our goals of producing the perfect truck."

The truck plant currently employs 2,600 hourly and salaried workers and assembles light-duty trucks for the North American and overseas markets. It now builds about 32 trucks an hour and that is expected to increase to 60 an hour after the expansion. No increase in employment in planned.

The modernization of the stamping operation will include the installation of eight transfer presses, some with capacity up to 4,500 tons. The facility em-

Short-term loans written at 'justifiable' high rates

Automotive pawnshop thrives in Vancouver

By Richard Johnson
Staff Writer

With the economy slumping in British Columbia, one Vancouver man has built a thriving, apparently one-of-a-kind business pawning cars and boats—and he has done it almost overnight.

In the first three weeks after he opened U-Pawn-A-Car, Ltd., Tim Down took nearly 250 cars in hock and wrote approximately a half-million dollars in short-term loans with money from private investors.

The cars range from $300 clunkers dating back to the late 1960s to a 1983 Rolls-Royce Corniche valued at $100,000.

The shop has done so well that Down is looking to expand his business across Canada and into the U. S. as quickly as possible. He hopes to open an outlet in California soon and is licking his chops about the possibilities in Nevada.

"It has been very, very successful, much beyond our expectations," said Down, who spent more than 10 years in real estate sales before discovering the possibilities of a big ticket pawnshop from acquaintances in the lending business.

"In certain parts of Canada, we have been experiencing somewhat of a crunch," he said, adding that his business offers auto owners a way to raise cash without going to a traditional lender.

Down writes 30-to-90-day loans, charging an interest rate of 3 to 4 percent a month. The high rate is justifiable, he said, because "we're fast and we ask no questions."

"I'm not going to pry into people's pasts," he said. "I want to avoid that. In that sense, I'm not like a normal lending institution. The only thing I'm concerned about is whether something is owing on the car and how much."

He said there are liens on approximately 40 percent of the cars in his custody.

"We originally were looking at doing a lot of boats, but the cars have made the business 10 times better," said Down. "We are doing about 80 percent cars and 20 percent boats."

A typical acquisition is between 1974-77 vintage and worth $2,000 to $3,000. But his stockpile includes a mint condition Ford, a $30,000 1980 Mercedes SL on which he loaned $22,000 and the Corniche.

The Rolls owner borrowed $40,000, although Down said the man owned the car free and clear and could have probably gotten more. A customer can usually borrow about $8,000 on $10,000 equity, he said.

"Cars like Mercedes are not real common, but we've had more than one," he said. "Those kind of people aren't breaking your door down."

Down said car owners generally do not have an emotional attachment to their vehicles as they might with family heirlooms.

"I haven't had that experience yet," he said. "Everybody says they are coming back for their cars and that is fine."

The pawnshop owner said customers use the money for a variety of reasons, including trips and paying creditors. Some hock their autos because they are behind in car payments, he said.

The five-member U-Pawn-A-Car staff is working out of temporary quarters in a downtown Vancouver office building. The cars are stored at various locations around the city, Down said.

Down said he researched the business extensively before opening the shop and could find no similar operation. But with his own success, he now expects to encounter opposition.

"I'm sure we'll have competitors and that is all right," he said. "I'm looking for partners in Canada and the U. S. Hopefully, we'll be down in California shortly and then go from there. Nevada is also very appealing."

The company is registered to do business in California and is looking for a location in the Los Angeles area, he said.

And one key post is left open

GM shakeup hints at new direction

By Dan McCosh
Detroit Reporter

General Motors last week elevated former Pontiac General Manager William E. Hoglund, 49, to group executive in charge of the Operating Staffs Group to replace David C. Collier, whose retirement was announced last month.

It was one of a series of organizational and personnel moves announced last week that thin the ranks of GM divisional general managers by consolidating several of its key supply operations.

The moves give further hints of the direction being taken by GM's previously announced reorganization plan that consolidates car development and manufacturing under two groups—the CPC Group (Chevrolet, Pontiac and Canada) and the BOC Group (Buick, Oldsmobile and Cadillac).

However, it left some significant posts unfilled, including a new head for GM's Worldwide Truck and Bus Group.

Hoglund's replacement at Pontiac is J. Michael Losh, 38, who moves north from his former job as managing director of General Motors de Mexico. Heading south to fill that post is Robert B. Stone, 53, formerly in charge of Materials Management Staff.

Losh was elected a GM vice president. Stone continues as a vice president.

• Emergence of Robert L. McKee, 58, as general manager of a newly created Fisher Guide Division, completes the breakup of GM's largest in-house supply operation.

Fisher Body once encompassed body stamping, body assembly, trim and hardware manufacturing that worked on cars for all GM divisions. Previously, the body plants were parceled out between the two new GM groups.

Fisher's eight body hardware plants were combined with the present Guide Division to make Fisher Guide.

Richard Gross will continue to manage the Guide operations, which include lamps, lighting controls, mirrors and energy-absorbing bumper systems. Donald F. Neubauer will manage the hardware plants.

Fisher's five trim operations were consolidated into Inland Division — a supply division also making interior trim components.

Richard J. McCuen continues to have responsibility for Fisher trim plants, reporting to John Debbink, Inland general manager. As a result of the consolidation, one general manager's title is eliminated.

Trim operations are labor-intensive and have frequently been working on new volume molding techniques that eventually will obsolete much of the traditional hand work in trim, and Inland has been the division working on much of this new technology.

GM insiders point to Fisher's history as a small-components supplier as tied to its independence as a body builder. Further consolidation of GM's trim operation thus is anticipated.

• Both the new Fisher Guide general manager and Inland's general manager report to Paul D. Pender, vice president and group executive in charge of the Mechanical Components Group.

Mechanical components is emerging under the reorganization as fountainhead of GM cross-divisional manufacturing, encompassing some foundry operations and Hydramatic Division.

Patrick J. Coletta, 57, a GM vice president and former general manager of CM Assembly Division, was named group director of operations of Truck and Bus Operations—nominally the Truck and Bus Group manufacturing job formerly held by McKee.

This still leaves open the job of group executive of the Truck and Bus Group vacated by Donald J. Atwood when he was elevated to executive vice president, said a Truck and Bus Group spokesman.

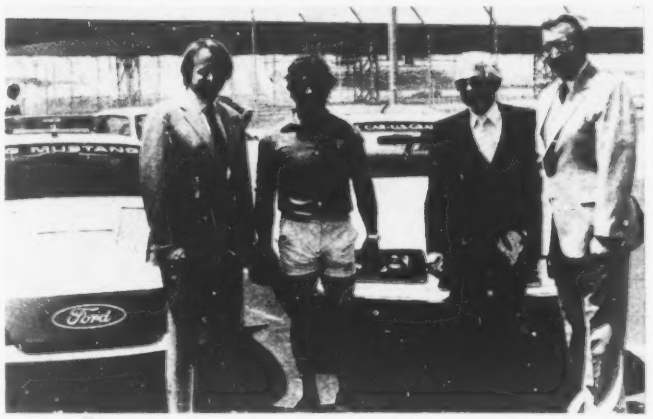
GM's new-car groups also get a permanent home at the Warren (Mich.) Technical Center. The CPC Group will be located in the former Fisher Body Division general office building, with the BOC people going to the former GM Assembly Division building. They had been temporarily headquartered in the Renaissance Center.

Hoglund's Operating Staffs Group consists of the following staffs: Consumer Relations and Service, Industrial Relations, Materials Management and Sales Marketing. The Personnel Administration and Development Staff, formerly a part of the Operating Staffs Group, has been moved to the Public Affairs Staffs Group.

Perot, EDS chief, joins GM board

NEW YORK. — Ross Perot was elected to the General Motors board of directors last week.

Perot is founder and chairman of Electronic Data Systems Corp., Dallas. On June 28, GM and EDS announced that they had reached an agreement in principle providing for the acquisition of EDS by GM in a merger transaction.



At the track

From left, Edsel B. Ford II, Ford Division advertising manager; driver Mario Andretti; Marvin Suskin, Scarsdale Ford, Inc., and Robert A. Lusko, New York district sales manager for Ford Division, are ready for a ride in a Thunderbird Turbo Coupe, official car of the U.S. Grand Prix at the Meadowlands.

Big stores shell out big dollars: $6 million by top 20

Dealers' TV ad spending skyrockets

By Joseph Bohn
Marketing Editor

Dealer associations traditionally spend heavily in TV advertising — but the number of individual dealers pouring big dollars into the medium also is growing rapidly.

Generally, that reflects the increasing growth of those dealers whose big volumes can justify the expense.

The top 20 TV dealer advertisers spent $6.01 million in the first quarter of 1984, according to the Television Advertising Bureau. That more than doubled the $2.69 million of 1983.

The phenomenal increase is partially due to the fact that some of these dealers showed no recorded expenditures a year ago in the Broadcast Advertiser Reports analysis, on which TVAB bases its data.

Among the top 20, Celozzi-Ettleson Chevrolet, Chicago, beat out Cal Worthington, Los Angeles, with outlays of $575,600 against Worthington's $554,500. (Expenditures by Worthington for his Sacramento store, however, added another $314,100.)

Worthington is a flamboyant TV advertiser who once confided, after an Automotive News World Congress address, that he didn't like to sell cars to people who read newspapers because they were too scrutinizing.

Other big spenders include: Pete Ellis Dodge, Los Angeles, $394,100; Jeff Legum Chevrolet/Datsun, Baltimore, $386,500; Rick Case Autos/Cycles, $343,800; Wagstaff House Toyota, Salt Lake, $295,700, and Dodge World, Louisville, $291,800.

Also, Suburban Ford, Sacramento, spent $266,900; Fox Chevrolet, Baltimore, $261,700; Serramonte Ford, San Francisco, $252,600; Potamkin Cadillac, New York, $247,600; Tysons Toyota, Washington, $246,700; Broadway Chrysler-Plymouth, Philadelphia, $234,800; Ladendorf Olds, Chicago, $232,300.

Also, Westminster Motors (GM), Baltimore, $232,100; Fremont Ford, San Francisco, $231,900; Cascade Ford, Seattle, $225,200; Ed Mullinax Ford, Cleveland, $212,200, and Nationwide Datsun, Baltimore, $205,700.

Meanwhile, dealer association spending also was sharply higher, reaching $59.98 million in the first quarter against $29.46 million last year.

Chevrolet and Oldsmobile dealer associations topped the list with $7.17 million and $6.80 million, respectively.

Nissan/Datsun and Ford associations followed with $6.09 million and $5.90 million, respectively.

Thereafter, Pontiac groups spent $4.22 million; Buick associations, $4.12 million; Mazda groups, $2.77 million; Subaru groups, $2.65 million; Dodge groups, $2.63 million; Lincoln-Mercury groups, $2.24 million; Chrysler-Plymouth groups, $2.02 million; Toyota groups, $1.71 million, and Volkswagen groups, $1.67 million.

Cadillac groups spent $1.56 million; Honda groups, $1.54 million; BMW groups, $1.20 million; American Motors groups, $1.09 million; "GM Dealers' Assn.," $982,800; Renault groups, $882,000, and Volvo groups, $689,200.

All ad expenditures for these various groups were up, with the exception of Subaru, which was off 4 percent from last year.

Broadcast Advertisers Reports data covers the top 75 markets in coming up with its estimates.

NHTSA to reimburse two consumer groups

WASHINGTON.—Public Citizen and the Center for Auto Safety exercised their rights to attorneys' fees in the Uniform Tire Quality Grading treadwear case, but failed to get the amount they wanted from NHTSA.

The consumer groups failed to prove the existence of "special factors" that would justify an award of $125 an hour for their attorneys' time, ruled the U. S. Court of Appeals for the District of Columbia Circuit.

The court granted them a total of $14,968.75 for attorneys' fees, law clerks' time and costs, the amount to which NHTSA claimed they were entitled.

Public Citizen and the CAS sued NHTSA in the appeals court, claiming that the agency's suspension of the treadwear grading requirements of UTQG was arbitrary and capricious. The court decided in their favor last April.

"It is hard to imagine a more sorry peformance of a congressional mandate," Judge Abner J. Mikva said of the agency's record on UTQG.

Under the Equal Access to Justice Act, individuals or groups that sue the federal government may seek reimbursement of attorneys' fees if they win. The ceiling rate in such cases is $75 per hour, but the plaintiffs may obtain more if they prove the existence of special factors.

The complexity of the UTQG case and the high quality of the lawyers' work justified the payment of $125 per hour, or $17,312.50 for attorneys' fees alone, the consumer group said.

NHTSA, however, claimed that the $125 - an - hour request was much higher than previous upward adjustments in similar cases.

NHTSA has until July 23 to appeal the case to the Supreme Court, but has not given any indication that it will do so.

The appeals court reportedly is waiting for NHTSA to issue guidelines for a return to UTQG treadwear grading.

Camaro by Pacific

The Pacific Camaro incorporates seven body panels with an optional whale tail and consists of a front air dam, front fenders that replace the stock fenders, rocker panels and quarter panels which fit over the existing quarter panels. Pacific is in Huntington Beach, Calif.

truck watch

By Jack Walsh
Truck Editor

The small, specialized heavy-truck company founded by former executives of the old Diamond Reo Trucks, Inc., in Lansing is producing a fire/rescue vehicle chassis with several unique features.

One of the features—a slide-out power module—could be the solution to problems of keeping big commercial trucks out of the shop for long periods and on the road where the money is made.

The engine, transmission and radiator of the new "Gladiator Super Command" are mounted on a roll-out frame which can be removed from the front of the cab when major repairs are required.

George W. Sztykiel, president, Spartan Motors, Inc., Charlotte, Mich., said the growing complexity of truck powertrain components will accelerate acceptance of the power-module concept.

The savings in downtime will offset the expense of having a replacement power module, in Sztykiel's opinion. The idea isn't new, but the need for a costly backup module was the big obstacle to acceptance of the concept.

• The cab-over-engine Gladiator features a non-tilting cab, which Sztykiel said eliminates the hazards and inconveniences associated with cabs that do tilt.

"Regular maintenance functions are easily performed by tilting a rear access cover," he said, "and major service can be performed by opening the front engine cover."

The Gladiator's all-aluminum, four-door cab features stand-up room in the crew section, measuring 75 inches from floor to roof. The cab is designed for seating up to 10 firefighters in full gear, two up front and eight in the crew section.

"There are a number of other uses for the crew section," Sztykiel said. "With windows all around, an inside control panel can protect the operator from

The Giant is back in stride

The Diamond Reo Giant, produced by Osterlund, Inc., in Harrisburg, Pa., is rolling today at a rate of two units a day in a new facility that was occupied in May. Things were slow during the recession, but the company is looking for a steady upturn in sales.

Diamond Reo Giant rolls on in a new plant

By Arthur M. Flax
Assistant Truck Editor

HARRISBURG, Pa. — Osterlund, Inc., maker of Diamond Reo heavy trucks, has emerged from the recession alive and well. So well, in fact, it is expanding its operations here with a new facility capable of producing 10 trucks a day.

According to Thomas L. Neitz, marketing director, Osterlund managed to stay profitable during the slow years, and now that the truck market has picked up, the firm decided the time was right for expansion.

Production at the new plant, into which Osterlund moved in early May, now runs at two trucks a day, with an increase to three planned in some three months, according to Jan Osterlund, executive vice president. Production for the year is estimated at around 500.

Neitz said the new plant is set up so that the company will be able to scale operations up or down quickly according to demand.

The old plant, which could produce one to 1½ trucks a day, has become the company's service and parts division.

Diamond Reo conventional units, called the Giant, are oriented toward construction and very heavy-duty use. The firm's Giant series includes single and tandem-axle versions, as well as a 6x6 model. The line also includes axle-forward versions suited for West Coast operations.

Although most of the firm's business is east of the Mississippi, Osterlund said the company is looking to spread its market West.

The company has 65 U.S. dealers, including locations in

Freight tonnage in first quarter up 9.1 pct. over '83

WASHINGTON.—Motor-carrier tonnage, net income and revenue increased in the first quarter of 1984 over the first quarter of 1983, but they still were far below previous highs.

The 9.1 percent increase in tonnage marks the first quarter-to-quarter increase since the second quarter of 1981. Less-than-truckload (LTL) tonnage increased at an even greater rate of 15.8 percent.

These findings come from a survey of 158 common carriers of general freight, conducted by the Regular Common Carrier Conference, an affiliate of the American Trucking Assns.

During the first quarter, the surveyed carriers transported 25.8 million tons of freight, up from 23.6 million tons in the first quarter of 1983. But this is still only 56 percent of the 45.8 million tons carried in the first quarter of 1979.

Total motor-carrier after-tax net income for the three months was $24.8 million, a 42 percent increase over the first quarter of 1983. Although this is a substantial increase and the best first quarter since 1980, the RCCC noted that 54 percent of the carriers showed a net loss for the first quarter of 1984.

Revenues of the surveyed carriers showed an 11.2 percent increase over the previous first quarter. However, this increase was offset by an 11.4 percent increase in expenses over the same period.

Gladiator Super Command

The four-door cab of the new Gladiator Super Command fire/rescue chassis, produced by Spartan Motors, Inc., Charlotte, Mich., features stand-up room in the crew section, which measures 75 inches from floor to roof. The cab can seat eight in the crew section and two up

truck industry news

Four-month total hits 1,249,132 units

U.S. registrations up 49.4 pct. through April

Registrations of new trucks of all types in the U.S. topped one million through the first four months of 1984, outpacing the previous year by almost 50 percent.

The four-month total of 1,249,132 units was 49.4 percent higher than the 836,109 units registered in the year-ago period, according to R.L. Polk & Co. statistics.

In April, there were 335,664 tallies, an increase of 37.7 percent over the year ago 243,798 units.

New York and Oklahoma figures for 1984 were compiled from manufacturers' sales records.

Light-truck tallies for the first four months totaled 1,179,757 units and accounted for 94.4 percent of the industry total. The figure was 50 percent higher than the 786,754 units tallied in the first four months of 1984.

The medium-truck count through April was 14,456, a gain of 30.3 percent over the year-ago 12,018.

Four-month heavy-truck registrations totaled 54,919, up 47.1 percent over the 37,337 tallies in the year-earlier period.

• In Group 1, there were 667,284 registrations through April, an increase of 52.4 percent over the previous year's 437,953. Group 2 tallies were up 44.2 percent to 499,900 units, compared with 346,648 a year ago.

The Group 3 count for the four-month period was dramatically higher than a year ago, 12,573 versus only 2,153.

The medium-trucks groups also showed large gains. In Group 4, there were 193 units

Table on Page 48.

compared with 91 in 1983. Group 5 had 728 tallies, versus 182 a year earlier.

The Group 6 total of 13,535 units marked a 15.2 percent increase over the 11,745 units tallied a year ago.

Group 7 registrations in the January-April period rose 25 percent, from 14,817 units in

Continued on Page 53, Col. 1

HD registrations surge 47 percent ahead of '83 count

Heavy-truck registrations for the first four months of 1984 maintained a huge lead over year-earlier tallies as 54,919 vehicles were registered, 47.1 percent more than 37,337 a year earlier.

According to R.L. Polk & Co. statistics, four-month Group 8 registrations were up 61.6 percent to 36,397 units, compared with the previous year's 22,520.

Group 7 tallies totaled 18,522,

In case involving U. S., Puerto Rican antitrust laws

Mitsubishi battling Chrysler dealer

WASHINGTON. — Mitsubishi Motors Corp. is embroiled with a Chrysler-Plymouth dealership in San Juan, P. R., in a complex case involving U. S. and Puerto Rican antitrust laws, arbitration of claims outside the U. S. and transshiping of automobiles.

The Supreme Court has asked the Solicitor General to file a brief expressing the government's view of the case.

Mitsubishi entered into distributor and sales procedure agreements with Soler Chrysler-Plymouth, Inc., late in 1979. Soler sold several thousand Mitsubishis in the 1980 model year, quadruple the number sold by the preceding franchisee.

Sales dropped sharply in 1981, however, and by December of that year, Mitsubishi was holding 966 cars in Japan for Soler, for which Soler owed approximately $3 million.

Soler wanted to transship some of the vehicles outside Puerto Rico, but Mitsubishi and Chrysler Corp. claimed that such transshipment would violate an agreement they had made regarding vehicle allocations and dealer orders.

Soler told Mitsubishi that it disclaimed responsibility for the cars still in Japan, claiming that the agreement between Chrysler and Mitsubishi represented illegal restraint of trade under U. S. and Puerto Rican antitrust laws.

Mitsubishi filed suit in March, 1982, with the U. S. District Court for the District of Puerto Rico, seeking to force Soler to arbitrate the matter before the Japan Commercial Arbitration Assn.

Soler filed a countersuit two months later, seeking $360 million in actual and punitive damages for alleged violations of the antitrust laws, the Dealer's Day in Court Act and the Puerto Rico Dealer's Act, among other charges.

• The district court ruled that all of Mitsubishi's claims and all but two of Soler's were covered by the arbitration clause written into the original 1979 agreements.

Soler petitioned the First Circuit Court of Appeals, which ruled that Soler's antitrust claims were important enough to overcome the mandate of the Federal Arbitration Act and should be decided by litigation, not arbitration.

Both Mitsubishi and Soler have since appealed to the Supreme Court. Mitsubishi argued that the appeals court's ruling on Soler's antitrust charges constituted "an impermissible judge-made exception to the Federal Arbitration Act."

The appeals court used the doctrine of a Second Circuit decision holding that pre-dispute arbitration agreements were void with respect to antitrust claims.

This doctrine "constitutes an unwarranted exception to the strong national policy in favor of arbitration" and "undercuts the certainty and neutrality which arbitration affords in the resolution of disputes arising out of international commerce," Mitsubishi argued.

Soler argued that the arbitration clause with Mitsubishi referred only to specific articles in the sales procedure agreement and did not cover any of its claims in the current case.

"Compelling a party to arbitrate a claim based upon a statute designed for that party's protection may, for all practical purpose, deny that party the protection the statute was designed to afford," Soler claimed.

The problem is especially significant when the arbitration will take place outside the U. S. and is not subject to U. S. regulations, the dealership added.

95 dealerships added in Canada; total is 3,449

WILLOWDALE, Ont. — The number of franchised automobile dealerships in Canada rose 2.84 percent in March from the year-ago month, according to the Federation of Automobile Dealer Assns. of Canada (FADA.)

As of March, the number of Canadian franchised automobile dealerships was 3,449, up 95 from the 3,354 reported a year earlier, FADA said.

At 953, General Motors had the most Canadian dealerships as of March. GM was followed by Ford Motor Co. with 639; Chrysler Corp., 524; American Motors, 213, and Toyota, 209.

GM added 19 dealerships since March, 1983, while Ford gained 15, Chrysler increased its ranks by 19; AMC grew by 30, and Toyota lost one.

Koester opens mall outlet

Koester Buick-AMC-Jeep-Renault-BMW, Decatur, Ill., sublet a 3,000-square-foot former clothing store in a shopping mall and boosted sales 20 percent. "We're going where the traffic is," said president Werner Koester.

Koester's satellite showroom brings vehicles to shoppers

DECATUR, Ill. — A satellite showroom means more sales for a Central Illinois dealership. In just 30 days, Koester Buick-AMC-Jeep-Renault-BMW hiked sales 44 percent, and nearly half of that increase resulted from sales at a compact showroom in a nearby shpping mall.

"The showroom at the mall means we're talking to people we don't normally see. We're getting a lot of conquest sales where people normally looking for a Ford or Chevy will switch and buy a Buick," said Werner Koester, president of the dealership.

Koester said the company sold 45 new cars in April, opened the 3,000-square-foot showroom May 1 and hiked sales to 65 new cars in an otherwise slow month. Nine of those 65 sales were made at the satellite showroom.

Koester said the nine sales closed at the Hickory Point Mall showroom in May (across the street from Koester's 7.5-acre deaership) cover the $5,500 monthly sublease for the former clothing store.

"It's easier to sell to a couple" and more couples come into the mall than into a dealership, Koester said.

"Women influence 85 percent of the closing situations and this showroom gets a lot of women thinking of a new car. Men at the mall have time on their hands and this (showroom) is a draw," he said.

Says hearing-impaired dealer

Deafness no deterrent in showroom

By Jack Bernstein
Staff Correspondent

ST. CHARLES, Mo. — Selling cars to the hearing-impaired requires "time, politeness and courtesy," according to Tom Pundmann, vice president and assistant sales manager, Pundmann Ford, here.

Pundmann, who is deaf, has won several Ford awards, including the Distinguished Service Award, Outstanding Sales Achievement for 1983 and 500 Club. He is the third - generation of his family in the auto business and believes that "communication and convenience" are important in satisfying deaf customers.

Tom Pundmann

"Being deaf, however, is no handicap in selling," he said. "I have two very helpful secretaries, and there is no communication or speech problem. Above all, you have to know your product."

Dr. T. Alan Hurwitz, president of the National Assn. of the Deaf, said that there are approximately 16.2 million hearing-impaired people in the U.S.

"A large percentage — 2 million — severly deaf persons drive cars," Hurwitz said.

Many deaf persons are oral, or read lips, and others depend on sign language. However, new electronics that permit easy communication, called TDD, can be connected to any conventional telephone.

"Deaf people who are considering purchasing an automobile may likely respond favorably to dealers or salespeople who make the effort to sit down and meet his/her specific communication needs. One may need to write down everything as clearly as possible," Hurwitz said.

• Hurwitz, who is associated with Rochester (N. Y.) Technical Institute for the Deaf, strongly recommends that a dealer install a TDD in the service center "if you want to establish an ongoing consumer relationship with your deaf customers after their purchase of an automobile from you."

"This way your deaf customers can always call the service center to make an appointment or ask a specific question about car problems," he said.

"Also, it will be a good idea for car dealers to have a TDD in the showroom area so that you and other prospective customers may carry on a telephone conversation about new or used cars for sale."

Billy Clinkscales, Clinkscales Chevrolet, Belton, S. C., did just that because a deaf couple bought a station wagon from him.

"The TDD makes the difference between convenience and inconvenience. They can call the dealership directly without having to rely on someone else," Clinkscales said.

Hurwitz said that "the willingness of car dealers to obtain the TDD or arrange for an interpreter will certainly make the difference."

"Once this is established, the word will without doubt spread quickly throughout the deaf community and encourage deaf people and their families and friends to visit your car dealership," Hurwitz said.

While Tom Pundmann has encountered some voice problems, it has not affected his sales, which may reach 200 cars this year.

HD registrations surge 47 percent ahead of '83 count

Continued from Page 16

a gain of 25 percent over the year-earlier 14,817.

New York and Oklahoma registrations for 1984 were compiled from manufacturers' sales records. No registrations were recorded for Utah in April, 1984, or for Oklahoma in 1983.

The April total of 15,511 compared with 10,816 units tallied a year earlier, and represented a 43.4 percent increase.

International continued to lead in heavy-truck tallies with 12,341 units through April, compared with Ford's 10,562 units.

Ford and International were the biggest losers in market share. Ford's 10,562 tallies represented 19.23 percent of the total, down 2.56 percentage points from the year-earlier 21.79 percent on 8,134 units.

International's 12,341 tallies represented 22.47 percent of the market, off 2.11 points from last year's 24.58 percent on 9,178 units.

Kenworth and White scored the largest gains in penetration. Kenworth's 8.35 percent share on 4,587 units represented a gain of 2.89 points over the 5.46 percent share on 2,038 units during the same period last year.

White's 4.61 percent share on 2,533 units represented a boost of 2.59 points over the 2.02 percent share on 756 units a year earlier.

Peterbilt, Freightliner, GMC, Autocar and Western Star also increased their market share. Mack, Chevrolet, Mercedes-Benz, Volvo and the miscellaneous group suffered losses.

Harvester extends chairman's contract

CHICAGO. — Directors of International Harvester have extended the contract of Chairman Donald D. Lennox for two years. His five-year pact, scheduled to expire in 1985, now will run until 1987.

Lennox, 65, joined Harvester in 1980 and was elected chairman and chief executive last September. He had served previously as president and chief operating officer.

Wilson signs

Bill Wilson signs a Ford Division sales agreement for Bill Wilson Ford, Harrison, O. Witnessing is James F. Gwaltney, Cincinnati district sales manager.

inclement weather and still provide unobstructive viewing at the fire scene.

"In place of the rear seating, a litter carrier can be installed, plus other emergency-rescue equipment and supplies, to make a combination fire/rescue vehicle," he added. "The crew area also could be set up as a mobile command station."

• While Sztykiel does the talking, he makes it clear that Spartan Motors isn't a one-man show.

"This company wouldn't be here today if it weren't for the teamwork of some very good people," he said.

Other former Diamond Reo alumni who are top executives of Spartan Motors are William Foster and Gerald Geary, vice presidents, and John Knox, treasurer.

The four former Diamond Reo executives, plus several others, and a former fiberglass-parts supplier to Diamond Reo established Spartan Motors in Charlotte in 1975.

Its first order came from the fire-apparatus operations of FMC Corp., whose finance subsidiary —FMC Financial Corp.—forced Diamond Reo into bankruptcy when it moved to seize the financially troubled truck builder's assets in 1974.

In addition to building trucks for the fire-equipment industry, Spartan Motors also produces special chassis for public utilities.

It also produced the prototype for the Diamond Reo Giant, a heavy construction truck now manufactured by Osterlund, Inc. The firm was founded by Loyal R. Osterlund, a former Diamond Reo dealer in Harrisburg, Pa.

Truck market rises 49.4 pct.

Continued from Page 16

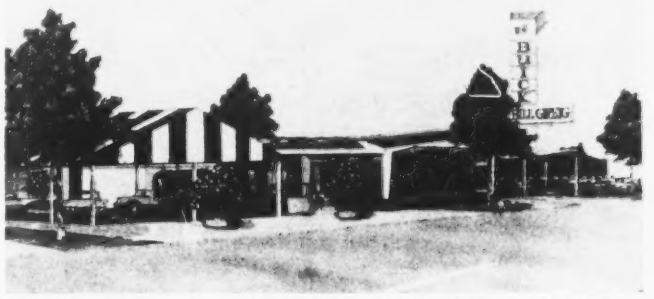
1983 to 18,522 units this year. The Group 8 count was 36,397, an increase of 61.6 percent over the 22,520 units registered a year earlier.

Ford continued to lead the industry with 363,854 units in the first four months, accounting for 29.13 percent of the total. Its share however, was down 2.72 percentage points from its year-earlier figure of 31.85 percent on 266,289 registrations.

Second-place Chevrolet took 27.75 percent of the total with 346,591 tallies. Its share was down 2.39 points from 30.14 percent on 252,000 units last year.

Expansion plans

Bill Greig Buick, Royal Oak, Mich., is expanding. The dealership is expanding over a side street that ran between its showroom and used-car lot. Below is an achitect's rendering of the completed expansion.



Diamond Reo expands, rolls on in new factory

Continued from Page 16

Colorado, Oregon and California. According to Neitz, the company would like to increase to 100 to 150 dealers. The firm also has 14 dealers in foreign countries.

Osterlund said "we're not out to take over the market. We just want a chunk of it."

He emphasized that Diamond Reo is a "quality truck" built in small numbers.

"We're not after big orders," he said. "We couldn't fill a 100-truck fleet order. Most orders are from the companies that order one to five trucks a year."

The Diamond Reo, however, is not a custom truck. Osterlund has standardized such components as Rockwell axles, Cummins engines, Fuller transmissions and Goodyear tires.

"We keep options to a minimum," Osterlund said. "We have to turn down orders every day. From a sales point of view, you hate to, but from a production point of view, it's the only way we can operate."

• The company was founded by Osterlund's father, Loyal F. Osterlund, who had been a dealer for Diamond Reo and other makes in the Harrisburg area for almost 20 years.

He bought the Diamond Reo manufacturing rights from the liquidators of the Lansing truck company after it went bankrupt in the middle 1970s.

Although he bought the production rights to six of the seven Diamond Reo models, he decided to build only one of them, a conventional which Diamond Reo discontinued about a year before it went out of business.

"It was their 'bread-and-butter' model for years, and it was my favorite," Osterlund said at the time. "I'm building this particular model because there's a big customer demand for [illegible]

He said the truck was ideal for such applications as concrete mixers, refuse collection, for hauling flatbed trailers, crane mounting, riggers and snowplows.

Loyal Osterlund continues as president of the company. Another son, Gary, owns the heavy - truck dealership, now located in Carlisle, just west of Harrisburg.

Toyota extends credit operations to 4 more states

TORRANCE, Calif. — Toyota Motor Credit Corp. (TMCC), a subsidiary of Toyota Motor Sales, U.S.A., Inc., extended operations in June to four more states: Maine, New Hampshire, Pennsylvania and Arizona.

TMCC, which started operations in mid-1983, now offers retail and wholesale financing for Toyota dealers in 12 states.

Additional expansion is planned throughout 1984.

"TMCC was conceived during a time of record-high interest rates and tight money to provide Toyota dealers with a stable financing course committed to servicing their financial needs," said Yale Gieszl, TMS/USA senior vice president for finance and administration.

"Although those situations have eased somewhat, the continental development of TMCC is in keeping with our long-term commitment to assist Toyota dealer operations," he said.

Loan plan helps workers move to new Ford jobs

By Marjorie Sorge
Labor Editor

The UAW and Ford Motor Co. have developed a low-interest loan package to help workers transfer between company facilities.

The plan, administered through Manufacturers National Bank of Detroit, allows Ford UAW workers to borrow between $500 and $1,000 in moving-expense loans to transfer to other Ford facilities at least 50 miles away. The current interest rate is 9 percent. The loans must be repaid in 12 to 18 months.

The loan plan was developed because many Ford workers were unable to take advantage of the preferential placement program, negotiated in the 1982 contract, according to Stephen P. Yokich, UAW vice president, and Peter J. Pestillo, Ford labor relations vice president.

"We found that some workers just didn't have the funds to move under the program, and others took the new jobs but came up short of living money until after their first paycheck arrived," they said.

The preferential placement program gives laid-off workers with little chance of recall preferential hiring rights for available jobs if they qualify or the right to "bump" probationary workers at other locations.

Under the 1982 contract, about 3,500 laid-off Ford workers have used the program. Workers who transferred after Jan. 1, 1983, will also be eligible for the loans.

The loan plan is guaranteed by the UAW-Ford Employe Development and Training Program.

In April, 1983, General Motors and the UAW set up a similar program for workers on the Guaranteed Income Stream program, giving those employes low-interest loans to move.

The GIS program provides high seniority laid-off workers with a percentage of their pay and benefits until they either retire or find a new job. Workers participating in the program must take a new job within the GM system if the company offers it to them or lose their GIS. Some of those workers complained they could not afford to make the move.

The GM loan program was started in California by Bank of America but was then extended to all GIS eligibles through National Bank of Detroit.

The GM program provided loans up to $1,000 repayable six months after the workers start the new job. GM guaranteed the loans.

Lawyer calls him frightened of underworld

New tack for DeLorean defense

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES.—Defense attorneys last week said John Z. DeLorean relinquished control of his car company to what he thought were underworld drug figures in order to get out of his dealings with them.

Donald Re, one of DeLorean's attorneys, said the former auto maker turned over 100 percent of his stock in DeLorean Motor Co., Inc., to Benedict Tisa, who was posing as a crooked banker, James Benedict, in order to protect himself and his family.

This latest tack in DeLorean's defense is in sharp contrast to earlier suggestions by the defense that DeLorean was conducting a "con" of his own — that the stock he proffered was worthless and since it had no value, there was no drug "deal."

Re told reporters, following the conclusion of cross-examination of agent John Valestra, that DeLorean was frightened at the prospect of dealing with underworld figures and was willing to "walk away from his dream" in order to save himself and his family.

The disclosure by the defense that DeLorean turned over 100 percent of the DMCI stock to Tisa differs from the account presented so far in court — that Valestra, posing as a drug kingpin named John Vicenza, would receive 50 percent of the DeLorean stock after Vicenza invested up to $60 million in drug profits in DeLorean's company.

According to the defense, DeLorean turned all the stock over to Benedict to hold until Vicenza put up $10 million and once an additional $50 million was turned over to the company, Vicenza would own 50 percent.

Since Benedict worked with Vicenza, Re said they effectively controlled the company.

During cross-examination of Valestra, Re continued to hit points that would show the Government trapped his client. In questioning Valestra about the Sept. 28 meeting in which DeLorean is shown phoning William M. Hetrick and asking him to go ahead with the "monkeys" (a codename for kilos of cocaine), Re suggested that Valestra prompted DeLorean to make the call to get it on videotape.

"It certainly wasn't a planned event," Valestra said of the call, although he admitted that having the call recorded "would be good evidence."

The Government began re-direct questioning of Valestra last week and is expected to call at least one other witness, Jerry West, the FBI agent who made the arrest of DeLorean.

N. Y. seat-belt bill waits for governor's signature

ALBANY.—The nation's first mandatory seat-belt-use law passed the final legislative hurdle and was on New York Gov. Mario Cuomo's desk for signing last week.

Cuomo has until Tuesday (July 10) to sign the measure.

The law would require drivers and front-seat passengers to wear seat belts, and there is a $50 fine for each violation. It will take effect Dec. 1, and there will be a one-month grace period before it is enforced. Cuomo is expected to sign the bill into law.

The measure is a compromise between the Assembly and Senate versions. It cleared conference and sailed through the Assembly on June 21 by a vote of 82 to 60. The Senate then passed the bill 38 to 22.

There was widespread support for the bill from safety groups, auto manufacturers, dealers and state traffic agencies.

According to various sources, this bill takes on national importance considering the size of New York and its population.

It could be a catalyst for other states to enact similar legislation, according to Elaine Petrocelli, director of the New York Coalition for Safety Belts. However, a similar move recently was defeated in Illinois.

There were objections in the debates centering on forcing citizens to wear belts rather than leaving them the opportunity to choose.

This bill also would require children under 10 to be restrained when riding in cars.

Auto industry vulnerable, Commerce analysts warn

Continued from Page 2

continue its recovery even in the face of support for it by Ford and Chrysler which, the analysts note, "wish to keep it alive to force the Administration to agree to pressure the Japanese Government to extend its limit on car exports beyond March, 1985."

(They also said of Ford and Chrysler that extending the voluntary restraint program would facilitate joint venture negotiations both companies have underway with their Japanese partners and that the extension, and higher profits because of them, would provide Ford in surance should it have to agree to a generous wage contract to avoid a strike.)

Last week Sen. Bob Packwood, Oregon Republican, completed his schedule of hearings on domestic content legislation with a hearing in Des Moines, Iowa. J. Paul McGrath, the Assistant Attorney General of the Antitrust Division of the Justice Department, testified for the administration in opposition to the measure.

GM and Ford fail to meet '83 CAFE requirements

Continued from Page 1

Motors is well beyond it with a 33.5 MPG CAFE.

The company with the highest CAFE is Honda, with a 35.4-MPG average and the company with the lowest is Rolls-Royce with a 11-MPG average, although this is 1.1 MPG higher than the standard NHTSA, which administers the CAFE program, had set for it.

The Japanese producers, reflecting their concentration on production of smaller vehicles, all bested 30-MPG CAFE, while the European makers, with their emphasis on sport sedans and luxury vehicles, generally came in with CAFE near or slightly below the 26-MPG standard.

BMW, for example, achieved 25.6 MPG; Saab, 25.9 MPG; Volvo, 25.8 MPG, and Mercedes-Benz, with a greater emphasis on diesels, registered a 26.6 CAFE.

In the accompanying table, assigned fuel-economy standard is the standard NHTSA has assigned to each maker to meet.

Nader snipes at GM's Smith in Dole letter

WASHINGTON. — Consumer advocate Ralph Nader fired off a last-minute letter to Transportation Secretary Elizabeth Dole to urge adoption of a passive-restraint rule mandating air bags in all new cars sold in the U. S.

DOT has said it will issue a proposed rule on passive restraints this week.

Nader told Dole that without General Motors Chairman Roger Smith's "appallingly stubborn opposition" to air bags, there would be no hesitation and no controversy over this decision." Nader did not elaborate.

Nader asked Dole to "repudiate the shame of Roger Smith" by requiring the installation of air-cushion restraint systems in all new automobiles.

obituaries

Joseph Burns Cody

DETROIT. — Joseph Burns Cody, 72, a consultant to Ross Roy, Inc., died June 28. A native Detroiter, Mr. Cody enjoyed a long career in the automotive, advertising and communications industries in the Detroit area. He began with the Chrysler Corp. Export Division in 1934 and moved on to Detroit Edison, Young & Rubicam, J. Walter Thompson, Ross Roy, Inc., Engineering Research & Manufacturing Co. and C & C Industrial Services. From 1956 to 1973, he was the Detroit sales director for Life Magazine, following which he moved to Peterson Publishing Co. and Wilding Advertising.

Oliver Nelson

BOSTON. — Oliver Nelson, 69, retired Boston sales manager for Chrysler Corp., died June 20 in Venice, Fla.

letterbox

Continued from Page 10

name them after FLOWERS!

The industry already uses the phrase "color-keyed." This could be used to the best advantage now. Imagine the color scheme that could be used on a Chrysler Chrysanthemum and a Pontiac Petunia. Midyear models could have appropriate names as a Mercury Mistletoe and a Cadillac Crocus.

For those persons needing a larger model or minivan, there could be the Ford Florabunda. Exclusive designer models could have Latin names as the Lincoln Lilium Longiflorum (Easter Lilies). Of course, the only model better than that would be the Lincoln Lilium Longiflorum BROUGHAM.

When you stop and consider the many advantages of naming automobiles as I have proposed, I'm surprised the idea hasn't caught on yet. After all, the Birth Control League of America was not too popular until the name was changed to Planned Parenthood. — **W. McBride**, Troy, Mich.

But import market share is sliced

First-half car sales best since 1979

Continued from Page 1

was up 27.32 percent and Dodge was up 21.16 percent. Ford Division was up 28.74 percent, Mercury was up 37.97 percent and Lincoln was up 59.69 percent.

Buick sales were up 19.30 percent, Cadillac was up 13.72 percent, Chevrolet was up 29.85 percent, Oldsmobile was up 1.08 percent and Pontiac was up 51.45 percent. VW was up 2.95 percent and Honda was up 289.48 percent for the first half.

With 154 first-half selling days this year compared with 153 in 1983, the domestic daily selling rate was up 25.46 percent: 27,574 vs. 21,738.

June domestic sales of 727,370 were up 8.86 percent from 668,145 last year. It was the highest total for the month since 1978 when an incredible 949,849 new cars were retailed. The 8.86-percent sales increase was the most modest of 1984, perhaps reflecting the rising interest rates now being tacked on new-car loans.

For the month, GM sales were up 9.90 percent, to 420,527 from 382,650. Ford reported sales of 179,196, up 5.29 percent from 170,196. Chrysler was up 10.17 percent, to 92,301 from 83,779. American Motors' 16,700 June sales were up 2.67 percent from 16,266 a year earlier while VW plunged 34.05 percent, to 6,599 from 10,006 and Honda doubled its total to 12,047 from 5,248.

The biggest piece of the June domestic pie went to GM, 57.81 percent, up some from 57.27 percent a year earlier. Ford dipped to 24.64 percent from 25.47 percent. Chrysler was up to 12.69 percent from 12.54 percent. AMC held 2.29 percent, down from 2.43 percent; VW dropped to 0.91 percent from 1.50 percent, and Honda grew to 1.66 percent from 0.79 percent.

The market class breakout showed domestic intermediates with the largest segment of the total, followed closely by imports. Intermediates had 24.88 percent in June, imports claimed 23.52 percent, compacts had 19.20 percent, subcompacts had 13.46 percent, standards had 11.03 percent and luxury models had 7.91 percent.

A year earlier, intermediates claimed 25.01 percent, imports had 26.04 percent, compacts had 17.60 percent, subcompacts had 13.86 percent, standards had 12.75 percent and luxury cars had 4.74 percent.

June import sales of 223,688 included records for the month for Toyota, Audi, Peugeot, Jaguar, Saab and Volvo. Mercedes-Benz, accustomed to standing among the record-setters, reported a sales drop of 13.21 percent for the month as dealer inventories dried up with no new cars being shipped from strike-idled factories in Germany.

Compatriot Volkswagen enjoyed a sales gain of 45.63 percent, Audi was up 30.65 percent and Porsche dropped 23.70 percent.

Japanese auto makers Nissan, Mazda and Isuzu had sales declines in June while Mitsubishi and Subaru were up. Honda imports were off 8.37 percent but combined with its U.S. sales, the total was up 10.74 percent.

June 21-30 domestic sales were up 10.90 percent, to 280,044 from 252,513. For the period, GM was up 20.72 percent, Ford was off 6.78 percent, Chrysler was up 12.38 percent, AMC was up 7.41 percent, VW was down 41.27 percent and Honda was up 167.52 percent.

GM's share of the June 21-30 market was 55.73 percent, Ford claimed 24.88 percent, Chrysler had 13.04 percent, AMC had 3.15 percent, VW had 1.19 percent and Honda had 2.01 percent.

With nine selling days in the period both years, the daily rate was up 10.90 percent, to 31,118 from 28,057.

Second-quarter domestic sales of 2,251,734 were up 19.89 percent from 1,878,108 a year ago.

GM earmarks $1 billion for Canadian growth

Continued from Page 2

ploys about 200 people and no increase is expected.

GM's decision to put the stamping plant in Oshawa was based on a loan of about $22 million from the Federal Government's Department of Regional Industrial Expansion and GM of Canada's return to profitability. GM of Canada had record profits of $675.6 million in 1983.

"The full potential of these plants and their benefits to employes will be achieved only by close cooperation between management and labor early in the design stages," Smith said. "We intend to work closely with the UAW and the employes it represents so their input can be utilized to maximize efficiency under the best possible conditions."

Earlier this year, GM announced a $255 million to build a V-6 fuel-injected engine at St. Catherines, Ont.

Car output reaches 4,260,695

Production: Best 1st half in 5 years

By Joe Wilssens
Staff Writer

Riding the wake of an impressive second-quarter build, domestic auto manufacturers posted their best six month production total in five years.

The industry completed 4,260,695 autos during the first six months of 1984, which was 29.01 percent more than the 3,302,571 finished in 1983. It was the best build for the period since 4,900,546 cars were assembled in 1979.

The Independence Day (July 4) reduced work schedules and resulted in 92,034 cars targeted for assembly last week, down 41.60 percent from the prior week's 157,603. The total, however, was 3.69 percent higher than the 88,758 autos assembled during the year-ago week.

Of last week's projected car production, General Motors accounted for 76.10 percent followed by Chrysler Corp., 20.26 and American Motors 3.64 percent.

All nine of Ford's auto assembly plants were idle last week as the company began summer vacation July 2. Ford workers are scheduled to return July 16.

Chrysler scheduled daily overtime at all five of its auto plants last week. The company's Belvidere (Ill.), Newark (Del.) and St. Louis Plants No. 1 and No. 2 worked two 9-hour daily shifts last week while the Jefferson (Detroit) facility worked two 8½-hour daily shifts.

Saturday (July 7) overtime was worked at GM's Oklahoma City and Van Nuys (Calif.) plants and at Flint's B and G lines.

Honda's Marysville (O.) plant was down last week for inventory adjustment. Workers returned to work today (July 9).

First half in Canada brings highest car output since 1978

Canadian auto manufacturers concluded production for the first half of 1984 with their best output in six years while truck assembly in Canada for the period reached a new high.

Canadian makers completed 592,598 autos during the first six months of 1984, 10.94 percent greater than last year's 534,168. It was the best build for the period since 613,754 were assembled in 1978.

The Canada Day (July 2) holiday shortened work schedules and caused assembly totals to slip last week. The auto makers targeted completion of 13,944 units, down 38.59 percent from the previous week's 22,708 but 9.57 prcent higher than the year ago week's 12,726.

So far this year, the industry has completed 604,683 cars, 10.82 percent better than 545,660 finished at this time last year.

Canadian truck manufacturers completed their most productive six-month period ever, finishing 436,776 units, 58.38 percent above 275,778 assembled during the 1983 period. This year's build tops the 415,339 trucks assembled in 1979, the previous best first-half tally.

Holiday-abbreviated schedules caused projected output to drop to 11,656 trucks last week, down 27.46 percent from the prior week's 16,069 but 35.99 percent greater than the year-ago week's 8,571.

Year-to-date, 446,588 trucks have been completed, 57.83 percent above 282,963 built during the comparable 1983 period.

International Harvester's Chatham (Ont.) and Vancouver (B.C.) facilities were idle last week for the first of two weeks of summer vacation. Both plants are scheduled to return July 16.

Ford Motor Co.'s Oakville (Ont.) truck assembly plant was also down for vacation last week.

Chrysler Corp. estimated production of 2,060 Dodge Caravans, 1,855 Plymouth Voyagers and 785 Mini Ram Vans at its Windsor (Ont.) facility last week bringing the year-to-date T-115 total to 120,319.

Truck production for 1st half tops 1983 by 43 pct.

Domestic truck production for the first six months of 1984 was the highest in five years.

The industry compeleted 1,638,000 trucks during the first half of the year, 43.35 percent better than 1,142,657 finished during the same 1983 period. This year's tally was the best since 1,891,166 trucks were built in 1979.

Independence Day (July 4) shortened work schedules last week and resulted in a drop in production. Truck makers slated assembly of 27,297 units, down 58.43 percent from the previous week's 65,679 but 16.70 percent higher than the year-ago week's 23,390.

Year-to-date, 1,650,988 trucks have been assembled in the U.S., 40.53 percent greater than 1,174,812 finished at this time last year.

Ford Motor Co.'s six truck facilities were idle last week as the company began summer vacation July 2. The plants are scheduled to return July 16.

American Motors Jeep facility at Toledo also began summer vacation last week and is also scheduled to resume production July 16.

International Harvester's Springfield (Ill.) plant was down last week for the first of two weeks of vacation and is expected to return July 16.

Chrysler extends truck incentives; Fifth Ave. added

Chrysler Corp. is still pushing truck incentives and has started a new Chrysler Fifth Ave. incentive as well.

Chrysler extended its "Import Truck Spring Dollars" program for dealers only from June 30 to July 31. It pays $100 to $400 per vehicle, depending on attainment of sales objectives, plus $100 for a fast-start phase on '83/'84 import trucks.

On domestic two- and four-wheel-drive Ram 250 and 350 pickups, Chrysler is continuing to offer $500 consumer rebates through July 31.

A "Rampage Rollout" program from June 21 to July 31 also pays dealers $500 for each eligible '83/'84 unit, after a one-unit, no-pay qualifier.

Finally, from June 21 to Aug. 10, dealers receive $500 to $1,000 on sales of Fifth Ave. models. Zero to 49.9 percent of objective pays nothing; 50 to 99.9 percent pays $500 per unit; 100 to 124.9 percent pays $700 per unit, and 125 percent and over pays $1,000 per unit, non retroactively. There is a three-unit, no-pay qualifier in this contest.

Coming from GM

Grand Am coupe for '85

The Grand Am coupe joins the Pontiac lineup this fall. It has a wheelbase of 103.4 inches, and its overall length is 177.5 inches. In size, it fits between the 2000 Sunbird (J-car) and the 6000 (A-car). The Grand Am is Pontiac's version of the GM20 car and is a sister of the Oldsmobile Calais and the Buick Somerset Regal. Story on Page 3.

Ron Lieberson

Chevrolet model has added punch

Muscle for the 1985 Chevrolet Cavalier convertible, shown in this unofficial photo, is provided by a 2.8-liter, fuel-injected V-6. Also standard are heavy-duty suspension and beefy tires. Tail lights have a five-rib design and redesigned instrument panel has an electric tachometer and a digital speedometer.

breaking news

Michelin names American boss

CLERMONT-FERRAND, France.—Michelin has named Yves Trellu to the new post of chief operating officer of its North American operations. He has been with the company's capital investments group here.

1,440 at Chrysler to receive bonuses

DETROIT.—Chrysler Corp.'s Compensation and Benefits Committee has approved bonuses to 1,440 senior-level managers. The amounts of bonuses to top executives will be revealed in the proxy statement which comes out next spring. The committee, made up of directors who are not Chrysler employes, described the bonuses as "prudent" and "reasonable" in light of Chrysler's stringent corporate goals, and said the amount is much less than the $51.6 million approved by shareholders at the annual meeting in June. The bonus will be the first paid in seven years.

Europe to switch to lead-free gas by 1989

LUXEMBOURG.—Lead-free gasoline will be introduced throughout the European Economic Community by 1989, although individual countries will be allowed to introduce it sooner. Several said they would.

NEWSPAPER

Despite reduction in total inventory

Car supply up to 52 days

By Kathleen Hamilton
Assistant Managing Editor

The balance of domestic new-car inventories improved during June as General Motors' sales slowed among some of its lines in shortest supply, and Volkswagen and American Motors improved their figures by cutting production.

The inventory of new domestic cars in dealer and factory stock dropped for the fourth straight month to a July 1 total of 1,445,799. It was the smallest domestic stockpile since Jan. 1. On June 1, stocks stood at 1,467,214.

But because the daily selling rates in all segments slowed down a bit last month, the July 1 days' supply rose to 52 days. It was the first increase in five months. There were 47 days' worth of cars in inventory June 1, and 47 on July 1, 1983.

All of VW's improvement in its days' supply of U. S. Rabbits can be attributed to its halt in production while its Westmoreland (Pa.) plant changes over to build the new Golf. VW's sales rate for the month was down, but not as much as its production.

At AMC, the story was different. The company did indeed reduce production, but the sales rates of both its big sellers — Renault Alliance and Encore — also showed big improvements during the month. As a result, its days' supply fell from 97 to 78 — still heavy and well above its 55-day stock of a year earlier.

• At GM, the days' supplies of the big rear-drive cars — Parisienne, Bonneville, Cadillac DeVille and Oldsmobile 98 — were higher than the supplies of the new front-drive cars that are replacing them at most of the divisions.

Oldsmobile was struggling with even fewer cars in stock than it had a month earlier, as changeover time came ever closer. Olds cut production of the Firenza and increased Firenza sales, ending the month with a 49-day supply — far better than the 72 days it held a month earlier. Combined, though, the division had only a 31-day stock of cars, the same as on June 1.

The rest of the GM divisions saw sales decreases — perhaps

4-year phase-in ruled for passive restraints

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The new passive-restraint standard — issued by Transportation Secretary Elizabeth H. Dole — is a two-track system intended to save as many lives as possible as soon as possible.

Thus, it weds a push for mandatory state use laws with a phased-in mandatory passive restraint standard. It even includes a government/industry educational program that teaches belt use and proclaims the benefits of air bags.

Because it gives something to almost everyone but refrains from giving all to anyone, it has met with varied reaction.

Even before the announcement was made, there were protests. State Farm, joined by the National Assn. of Independent Insurers, went to court in the District of Columbia Circuit where it had previously won its challenge to the rescission of the previous standard by former NHTSA Chief Raymond A. Peck.

The Automobile Importers of America went to court in the Ninth Circuit in California to protect the concerns of its mixed bag of members.

Meanwhile, Dole was hailed as a miracle worker to get White

Continued on Page 63, Col. 1

Dole's decision in brief

Compliance

Manufacturers are in compliance when the car's driver and right-front-seat passenger are protected in a 30-MPH crash into a fixed barrier.

Effective dates

Standard applies to 10 percent of all cars manufactured for sale in the U. S. after Sept. 1, 1986; 25 percent of those made after Sept. 1, 1987; 40 percent after Sept. 1, 1988, and all cars built after Sept. 1, 1989.

Belt-use laws

The automatic-restraint requirements of the standard will be rescinded if states accounting for two-thirds or more of the U. S. population have enacted mandatory seat-belt laws before April 1, 1989. The laws must be enforced by September, 1989.

Means of compliance

Auto makers may use any means of automatic crash protection that meet the standard. This includes automatic belts, air bags or any new technologies that provide occupant protection in a 30-MPH crash test.

Alternate technology

To encourage the use of air bags or other new technologies, such as energy-absorbing interiors, the Department of Transportation will credit a manufacturer with 1½ cars for every one car complying with the standard on the driver's side by means other than an automatic belt and with an automatic restraint of any design on the passenger's side. This credit applies during the phase-in period (model years 1987-89) only.

Education program

As a separate measure, a total of $40 million a year in Department of Transportation and private sector funds will be made available in support of a cooperative education program to encourage greater use of safety belts and mandatory usage laws.

Taiwanese firm linked to Ford markets phony Volvo fenders

By John A. Russell
New York Staff Writer

ROCKLEIGH, N. J. — A Taiwanese machine works company linked with the subsidiary of Ford Motor Co. on that island is manufacturing and exporting to the U. S. Volvo front fenders in apparent violation of U. S. patent laws.

It appears to be costing the Swedish auto maker millions of dollars in lost sales.

The counterfeit fenders were traced to Lio Ho Machine Works, Ltd., which is a member of the Lio Ho Group. In its sales brochure the company notes the group includes Ford Lio Ho Motor Co., Ltd., an engine manufacturer owned by Ford Motor Co. The company claims it is an OEM supplier to Ford Lio Ho, and Ford Motor Co., Ltd., of Australia and Malaysia.

Pontiac preps its version of GM20 car

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES. — Seeking to crack the upscale sport coupe market dominated by imports, Pontiac is readying its version of the GM20 car for an early October introduction.

Named Grand Am, the coupe rides on a 103.4-inch wheelbase, has an overall length of 177.5 inches and a width of 66.9 inches.

Although the car is not a successor to the Phoenix, its size is slotted in the position vacated by the X-car in Pontiac's line, between the J and A bodies.

Base powerplant in Grand Am is a 2.5-liter four-cylinder engine dubbed the Tech 4. The engine is essentially the Iron Duke fitted with throttle-body injection (TBI), swirlport heads and roller bearing lifters. It produces 92 HP at 4,000 RPM, and 134 pounds-feet of torque at 2,800 RPM.

The four-cylinder engine can be ordered with either a three-speed automatic or five-speed manual transaxle.

A Buick-produced 3.0 liter V-6 engine is optional and is available with the three-speed automatic only. The 90-degree V-6 features port fuel injection and is rated at 125 HP at 4,900 RPM. The powerplant produces 150 pounds-feet of torque at 2,400 RPM.

Suspension on the front-wheel-drive car is MacPherson struts forward and semi-independent trailing arms with coil springs in the rear. Brakes are front disk-rear drum.

Power-assisted rack-and-pinion

Continued on Page 66, Col. 1

Unique test drive

Neal Pope AMC-Jeep-Renault, Atlanta, held a Jeepers Jamboree which attracted many four-wheel-drive fans to the rugged terrain of the specially constructed off-road driving area adjacent to the dealership. A steady line of drivers mastered the course, which tested the versatility of the Jeeps.

Other makers abstain

Chrysler provides convention cars

By Keith Gave
Detroit Reporter

Chrysler Corp. is providing 80 chauffeur-driven cars and vans to shuttle political dignitaries around during the Democratic and Republican conventions, company officials said.

"It makes good marketing sense to have that kind of visibility," said Dick Muller, of Chrysler's Washington office. He emphasized that providing the vehicles should not be confused with a political contribution.

"It's in the same category as providing cars to the Rose Bowl, the Olympics or the Louisiana World Exposition," Muller said, citing "a considerable body of legal opinion" that supports the action as separate from political campaign contributions.

He said the company will provide 60 cars, mostly New Yorkers, with some Fifth Avenues and Dodge Diplomats, 10 vans and 10 T-wagons.

The cars will be used primarily by the heads of state delegations, usually governors, and other convention VIPs, while the vans may be used by the convention committees to move people and equipment around.

"We don't specify" who uses them, Muller said. "It's up to them."

• Chrysler also is leasing about 10 limousines to the Secret Service to chauffeur candidates' families around, Muller said.

All the vehicles will be shipped from San Francisco after this week's Democratic gatherings to Dallas for the Republican convention next month. After that, they will be sold as new vehicles through dealers in the Southwest, Muller said.

"We already have a request from Georgia for one of those limos," he added.

Chrysler apparently is the only auto maker providing cars.

"Usually they (political leaders) come and ask," Muller said. "In our case, I think they came to us first."

General Motors, Ford Motor Co., American Motors and Volkswagen said they were not providing cars.

Honda spokesman Dave Jenkins said Honda couldn't have provided any vehicles even if the company had been asked because "we're so damned short of cars, we don't have any available."

"We steer clear from that," said Toyota spokesman Kurt Von.

Must stay competitive, Ford's Pestillo says

Outsourcing decisions linked to new contract

By Marjorie Sorge
Labor Editor

Ford Motor Co.'s future sourcing decisions will depend on how competitive its new contract with the UAW makes it in the worldwide auto market, according to Peter J. Pestillo, labor relations vice president.

In an interview with Automotive News, Pestillo indicated that any new UAW-Ford agreement could not raise labor costs much higher than the $22.67 (in 1983) an hour if small-car production is to remain in the U.S. and other products are to continue to be produced in-house.

The UAW's number one demand is job security and the union says it is closely linked to limiting outsourcing. But Pestillo said both demands are directly connected to the company's competitiveness and are not necessarily one and the same.

"People who talk about outsourcing and job protection in the same breath are confusing problems and remedies," he said. "The problem is job protection — how do we go about assuring this workforce reasonable employment over a period of time.

"The remedies include workplace and workforce guarantees like the Guaranteed Income Stream (which provides payments to high seniority workers laid off because of plant closings), other forms of income protection and sourcing restrictions to some extent.

"But, to me, the least effective remedy is the sourcing restriction because that doesn't assure that you have production. I think we have all learned that the extent to which we deny flexibility in an industry as volatile and dynamic as this may be inviting bigger problems."

The watchword during negotiations at Ford will be competitiveness and the company's place in the worldwide market. Pestillo indicated all talks will be based on that one issue.

"The future of the small car in America is linked to a responsible settlement, so there is every reason for us to work together," he said.

"The fifth year (of the Voluntary Restraint Agreement on Japanese cars) is directly linked (to a responsible labor agreement and) to the small car in terms of products. We are facing a major competitive disadvantage vis-a-vis the Japanese. There is no way we can leap the $2,200 hurdle (Japanese advantage per car) with wage rates that grow dramatically higher than they are today."

According to Pestillo, there is currently an $8 to $10 an hour

Kelderman rejoins Automotive News

Jake Kelderman has rejoined Automotive News' Washington Bureau as a Washington Reporter.

He had previously served in the bureau from 1976 to 1983. Prior to rejoining Automotive News, he finished co-authoring a book, Dealerships: Car and Truck Retailing Through the '90s.

Kelderman is a graduate of the University of Wisconsin School of Journalism.

Wash. Journalism Review, Crain tie up

Crain Communications, Inc., has entered into a partnership arrangement with Washington Journalism Review.

The partnership will substantially expand the operations of the Review, the national magazine serving both broadcast and print columnists, commentators, communicators and journalists.

Jessica Catto will continue as publisher and Katherine Winton Evans will remain editor at the publication's Washington headquarters at 2233 Wisconsin Ave. A New York advertising office has been opened in Crain's offices there, 220 E. 42nd St.

In a joint statement reporting the affiliation, Catto and Sidney R. Bernstein, chairman of Crain's Executive Committee, said:

"Washington Journalism Review has developed exceptional recognition among both print and broadcast journalists under the editorship of Kay Evans. Although it is only four years old, we believe it is fast approaching leadership not only among journalists and communicators in both broadcast and print media but also among government executives and business officials whose primary function involves dealing with the public.

"Although plans are not complete, it has already been decided that the Review will hereafter publish 12 times a year (up from 10 times a year) and will be audited by Audit Bureau of Circulations as a business paper rather than a general magazine."

Crain Communications publishes more than 20 newspapers and magazines — including Automotive News, Advertising Age, Crain's Chicago Business and Modern Healthcare.

Consumer complaints being remedied

Lemon laws trigger more buybacks

By Jeff Spivak
Detroit Reporter

The wave of auto lemon law legislation spreading across the country has helped consumers achieve a higher rate of manufacturer buybacks of defective new cars while generally working to remedy the "No. 1 consumer complaint."

But U.S. car makers maintain their original contention that the laws are not needed.

Lemon laws generally require manufacturers to either refund a customer's money or replace a new vehicle that is out of service for 30 days or more during the first year or first 12,000 miles of ownership, plus those cars with defects still not corrected after a specified number of service attempts (usually four).

So far, such legislation has been enacted in 33 states, 15 in 1984 alone.

Statistics for two of the earliest states to pass lemon laws also show the immediate impact the consumer protection move has had on the industry: Manufacturers are buying back more cars in the arbitration process that consumers are required to follow.

• According to the Mediation and Arbitration Program of the Council of Better Business Bureaus in Arlington, Va., 22.1 percent of New York State arbitration decisions resulted in buybacks during a nine-month period from June, 1983, when the state's lemon law went into effect.

During the first six months of 1983, though, buybacks were decided in just 11.9 percent of the cases. Before the lemon laws, there were no formal standards or procedures for buybacks.

The same trend occurred in North Carolina, whose lemon law also went into effect last summer. Arbitration panels ordered buybacks in 15.4 percent of the decisions during the same nine-month period, compared with 10.5 percent for the preceding six months.

Those figures might be inflated, though, as car sales have increased and more vehicles are covered by lemon laws.

"The new legislation reflects consumer problems with new

Ferrari 'Day' planned

ROLLE, Switzerland. — Collectors and admirers of Ferrari cars plan to hold a one-day exhibition—"The Day of the Automobile"—here Sept. 2. A contest will be held for the most elegant car, and additional prizes will be given to the best attractions.

Fun and games for the conventions

It's 'Political Pursuit' time at Ford

By Keith A. Gave
Detroit Reporter

Which president first used the Lincoln as a presidential car?

How many times was Richard Nixon on the presidential ticket?

Who received 32 first-place votes at the 1916 GOP convention?

What important Ford event occurred on April 17, 1964?

The questions are from a new game called "Political Pursuit," Ford's low-key, but hardly trivial attempt to focus a little attention on itself during the political conventions this summer.

Read on for the answers.

The game, which features 400 questions — 100 each in three political categories and another 100 on Ford Motor Co. — will be distributed to the 1,200 journalists who cover the Democratic convention in San Francisco and the Republican gathering in Dallas.

"We figured there are only so many tote bags you can walk away with," said Bob Waite, of Ford's public affairs office in Washington, referring to all the freebies offered the working media.

"And there are only so many drinks you can drink at a convention, although for some that may be more than for others."

Waite, Barbara Mansfield and their boss, Jerald F. terHorst, created the game, which Waite said is "guaranteed to challenge" the trivia literacy of such political heavyweights as syndicated columnist George Will and Time's Hugh Sidey.

Who keynoted the 1964 Democratic convention? The 1980 convention?

Which 1980 GOP candidate was born in a boxcar?

Keep reading.

Ford contracted a playing card company to put the game together. It consists of 100 cards with four questions on one side and the answers — all verified by the Library of Congress — on the other.

"It's similar to a bridge deck," Waite said, "only with the Ford logo discretely placed."

There are no dice or other moving pieces. In fact, the only object of "Political Pursuit" is to humor convention reporters with questions from categories on elections and primaries, presidents and candidates, or conventions and parties. And, of course, Ford.

Which two gangsters wrote Henry Ford, praising his car?

During which years was the Edsel produced?

The Edsel, most trivia buffs know, made its ill-fated appearance from 1957-59. John Dillinger and Clyde Barrow liked Ford's cars.

Coolidge was the first president to use the Lincoln; Nixon was on the ballot five times, count 'em, five, times; Henry Ford garnered 32 first-place votes at the 1916 Republican convention, and the Mustang made its auspicious debut in April, 1964.

Rhode Island Senator John O. Pastore keynoted the 1964 Democratic convention and Michigan Rep. Guy Van der Jagt keynoted the 1980 GOP meeting; Benjamin Fernandez was born in a boxcar.

Based on the current trivia craze, Ford figured to reap a harvest of publicity with its game. Already, it has been featured in the Washington Post and is scheduled to debut soon on national television in a morning news show, Waite said, adding that a second edition — 400 new questions — is already in the works.

Pretty good mileage for a rather small investment, he admitted. "Better than a tote bag."

Alfa Romeo's newest shamrock

Alfa Romeo is introducing this sporty version of its 33 model in Italy and soon in other European markets. Called the 22 Quadrifoglio Verde (green four-leaf shamrock), it is the fifth version in the range and is not available in the U. S. The 33 QV gets a newly tuned engine, newly set suspension, brakes and aerodynamic improvements. Small spoilers have been added front and rear, underneath the bumpers.

Guardian Industries chief plans to buy all firm's stock

By Michelle Krebs
Financial Editor

NORTHVILLE, Mich. — William Davidson, president, chief executive and principal shareholder of Guardian Industries, Inc., a supplier of glass for the automotive industry, announced plans to purchase the rest of the company's stock.

Davidson, who owns 42.4 percent of Guardian Industries' stock, said he is negotiating with 10 major shareholders, who hold about 4.4 million of the company's 22.1 million outstanding shares for a combination of cash and principal amount of debt securities totaling $24 a share.

The rest of the shares would be purchased for cash only.

The $305.5 million transaction would make Guardian Industries a private company.

In addition, the company has been buying its own stock on the open market since spring. The stock price is considered undervalued, fluctuating between $14 and $27 per share in the past year. Upon announcement of the buyout, the stock jumped 6½ points to $21.75.

The buyout offer is subject to certain conditions including obtaining necessary financing, completing a deal with the 10 major shareholders and the restructuring of the company's present debt.

Guardian Industries has enjoyed eight consecutive years of revenue and earnings growth. In 1983, the company had income of $38.1 million on revenue of $469.6 million.

Headquartered in Northville, the company manufacturers flat glass products for the construction and transportation industries. It also processes film for the amateur photography market and makes insulation materials.

N. C. child restraint law carries stiffer penalty

CHAPEL HILL, N. C. — The penalty for violation of North Carolina's mandatory child-restraint law has been increased from a warning citation to a fine of up to $10.

Passed in 1981 and effective since July 1, 1982, the law requires that all children under age two who are traveling with their parents in a "family purpose" vehicle be restrained in a safety seat (required for those under age one) or a seat belt.

Early July sales climb 32 pct.; best since '78

Early-July domestic new-car sales were up 32.02 percent from a year earlier and figured to an annual rate of 8.95 million. Total for the 10 days was 179,026 compared with 135,604. It was best for July 1-10 since 1978 when 209,964 new cars were delivered.

For the period, General Motors was up 29.35 percent, to 103,655 from 80,135 last year. Ford Motor Co. was up 39.93 percent, to 44,323 from 31,673. Chrysler Corp. reported sales of 21,827 passenger cars, up 19.60 percent from 18,250. American Motors sales, estimated at 5,400, were up 47.95 percent from 3,650. Volkswagen was up 68.60 percent, to 1,224 from 726, and Honda was up 121.97 percent, to 2,597 from 1,170.

GM's share of the market dipped to 57.90 percent from 59.09 percent. Ford had 24.76 percent, up from 23.36 percent. Chrysler earned 12.19 percent, down from 13.46 percent. AMC climbed to 3.02 percent from 2.69 percent; VW had 0.68 percent compared with 0.54 percent, and Honda grew to 1.45 percent from 0.86 percent.

Year-to-date sales were up 27.51 percent, to 4,425,369 from 3,470,632.

Spady marks 25

HASTINGS, Neb. — Jerry Spady has celebrated 25 years as a Pontiac dealer here.

New-car stock cut back 4th month in row

Continued from Page 1

because of shortages. In total, GM's days' supply stood at 44 on July 1, up from 38 the month before.

Chrysler Division's high-line cars showed inventory increases during the month, as sales of the New Yorker E and the Chrysler E-Class slowed. The 99-day supply for the Fifth Avenue, however, was due to a major hike in its production level.

Ford Motor Co. both improved the selling rates and reduced production levels of Tempo and Topaz, thereby improving those days' supply figures.

There still weren't enough domestic Accords for Honda to sell: 15 day's worth. But once again, that was better than Honda's import stockpile. (Import inventories will be published next week.)

• The July corporate breakdown of domestic inventories was: GM, 42.81 percent; Ford, 29.31 percent; Chrysler, 16.71 percent; AMC, 3.44 percent; VW, 1.24 percent, and Honda, 0.47 percent.

The size-class breakdown showed the slowdown in sales rates was universal. And although the days' supplies were up in every category, the actual number of cars in stock rose in only two categories: Standard size and luxury autos.

Here's that breakout for July 1: Subcompact, 20.45 percent of inventories; compact, 28.18 percent; intermediates, 28.99 percent; standard, 13.57 percent, and luxury, 8.81 percent.

One month earlier, the shares were subcompact, 21.14 percent; compact, 28.26 percent; intermediate, 29.43 percent; standard, 12.61 percent, and luxury, 8.56 percent.

The days' supplies of subcompacts on July 1: Alliance, 78; Charger, 77; Daytona, 77; Laser, 75; Lynx, 73; Encore, 72; Rabbit, 70; Turismo, 67; Pontiac 1000, 67; Horizon, 66; Omni, 65; Escort, 65; Chevette, 58; EXP, 48; Fiero, 20, and Honda, 15.

• The breakdown for compacts was Cimarron, 111; Eagle, 102; Topaz, 78; Capri, 75; Tempo, 74; Dodge 600 2-door, 71; LeBaron, 67; Camaro, 65; Mustang, 63; Skyhawk, 59; Aries, 55; 2000 Sunbird, 55; Firenza, 49; Reliant, 48; Firebird, 44, and Cavalier, 42.

For intermediates: Chrysler E Class, 101; New Yorker E, 100; Phoenix, 95; Malibu, 93; Dodge 600 four-door, 89; Bonneville, 84; Thunderbird, 80; Cougar, 60; Regal, 59; Grand Prix, 58; Monte Carlo, 52; LTD, 50; Citation, 47; Skylark, 42; Century, 42; Marquis, 38; Omega, 36; Celebrity, 34; Pontiac 6000, 33; Cutlass Ciera, 26, and Cutlass Supreme, 25.

For standard-size cars: Parisienne, 82; Grand Marquis, 59; Crown Victoria, 55; Chevrolet, 52; Diplomat, 48; Gran Fury, 35, and Oldsmobile 88, 32.

In the luxury class: Fifth Avenue, 99; Corvette, 68; Toronado, 64; Mark VII, 62; Eldorado, 57; Seville, 52; Riviera, 49; Lincoln, 41; Continental, 41; Oldsmobile 98, 26; Cadillac, 26, and Electra, 24.

'First of a kind' General

Detroit Diesel Allison Division, General Motors, displayed this "first of a kind," electronically controlled GMC General at its annual Indy 500 Truck Roadeo in Indianapolis for key distributors and customers. It features an 8V92TTA DDEC (Detroit Diesel Electronic Control) engine and an HTB 755CR ATEC (Allison Transmission Electronic Control) automatic transmission with the new output shaft retarder

Axle remanufacture launched by Rockwell

TROY, Mich.—A comprehensive $1.5 million program involving Rockwell International's entry into the remanufacture of axle carriers for the truck aftermarket has been announced by the company's On-Highway Products Operations.

The remanufactured carriers are available through the OEM truck-dealer network, first in the Southeast region of the U.S. For the first six months, the program will be available only through OEM dealers in Florida, Alabama, Georgia, North and South Carolina, West Virginia, Virginia, Kentucky and Tennessee.

The company said it decided on the regional approach so that it could better monitor the balance between long-term capacity requirements and market demand.

"Our remanufacturing process," said Richard A. Banfield, vice president, Operations and Service Parts, "will be housed initially in a 22,000-square-foot area. If market demand indicates a requirement for greater capacity, we'd like to know that before rolling out the program throughout the entire U.S., which we plan to do within the next six to nine months."

The remanufactured carriers cover five of the company's axle models: R-170 single rear axle and SQHD, SQ-100, SQHP and SSHD tandems. They will be produced and shipped from the company's Service Parts Distribution Center in Florence, Ky.

• Banfield said the company's entry into the axle-remanufacturing business is in response "to what we see as a growing demand from the truck aftermarket for more durable, quality made components.

"I want to emphasize that we are entering the remanufacturing and not the rebuilding business," said Banfield. "Let me cite just one example of the critical difference between the two. Under our program, all individual carrier parts will be gauged for dimensional integ-

ATA names Donohue executive VP and CEO

WASHINGTON. — Thomas J. Donohue has been named executive vice president and chief executive officer of American Trucking Assns., and as chosen to succeed [illegible]ett C. Whitlock Jr. as ATA president by the organization's Finance and Administrative Committee.

Currently group vice president-development and a member of the executive office of the U.S. Chamber of Commerce, Donohue, 45, will join ATA in mid-July.

truck industry news

First-half and June totals trail only record '78

Truck sales hit 2nd-best

Retail sales of new trucks of all types in the U.S. in June and the first half of 1984 were the second-highest in industry history, with sharp increases in all three market segments.

Six-month sales, according to preliminary factory and distributor reports, totaled 2,094,336 units, an increase of 40.2 percent over last year's 1,493,561.

The first-half count was 0.9 percent under the record 2,113,208 vehicles retailed by franchised dealers and factory outlets in the January-June period in 1978.

In June, 363,449 trucks were sold, up 20.5 percent from the year-earlier 301,664 units. The total for the month was 11.6 percent under the alltime June high of 411,267 sales recorded in 1978.

Retail outlets moved a record 1,964,240 light trucks in the first half, an increase of 39.7 percent over last year's 1,405,838 units. The total was 1.8 percent higher than the 1,929,045 retailed in 1978, the previous high for the period.

• Medium-truck sales through June were up 17.9 percent to 26,912 units, compared with 22,-

Table on Page 49.

818 a year ago. The total was far below the 82,449 mediums retailed in the like period in 1978, and is due to a sharp drop in Class 6 deliveries.

Heavies were 59 percent higher than a year ago in the first six months, 107,184 versus 64,905. Sales were up 1.4 percent from the 101,714 units retailed in 1978.

During the month, 338,337 light trucks were retailed, an increase of 18.4 percent over the year-earlier 285,811 units. Mediums totaled 4,517, up 2.3 percent from last year's 4,414, and the heavies were 80 percent higher, from 11,439 units a year ago to 20,595.

Compact trucks accounted for 44.1 percent of the six-month light-truck sales. Dealers retailed 866,195 units, a gain of 69.1 percent over last year's 512,290.

June sales of the small trucks totaled 151,909, up 38.4 percent from the year-ago 109,744 units. They represented 44.9 percent of the month's light-truck count.

Six-month sales of compact trucks built in the U.S. were up 86.4 percent to 603,778 units, compared with 323,896 a year ago. Japanese imports totaled 262,417, a gain of 39.3 percent over last year's 188,394 units.

During the month, dealers sold 104,345 of the domestic small trucks, 45.3 percent higher than the year-earlier 71,817. The imports were up 25.4 per-

Warehouser questions GM's just-in-time plan

General Motors' Truck and Bus Group plans to deliver components to its new Baltimore Astro/USV minivan plant on a just-in-time basis, but a Detroit area entrepreneur, Raymond J. Dallas, claims GM will need his short-term warehouse if it is to be successful.

Dallas, chairman and chief executive of Just-In-Time Warehousing, Warren, Mich., said GM will never be able to schedule the massive movement of materials into its plant on a just-in-time basis without some sort of warehousing to act as a buffer for delays in supply and scheduling conflicts.

Trucks, he said, will be lined up for miles outside the plant.

Just-In-Time Warehousing has acquired a 200,000-square-foot warehouse adjacent to the Baltimore GM plant. The warehouse is the first automotive-related venture for Dallas, a developer of shopping malls in Ohio, Michigan and Illinois since 1955.

Dallas said he never talked to the top echelon at GM, but that some GM officials strongly suggested he start his venture.

"The people I talked to (at GM) said this is the way to go," he explained. "Get set up to do just-in-time in Baltimore. I should have gone to the top echelon, but I was anxious and jumped in with both feet."

GM said it neither encouraged nor endorsed Dallas' plan.

• Under Dallas' plan, suppliers could lease enough space to supply the van plant for up to four days. The warehousing company would unload trucks, provide computerized inventory control so that the supplier would know when to restock the warehouse, and deliver parts to the GM plant, as needed, probably in a straight truck with a large box.

In addition to acting as a buffer for shipments, Dallas said his nonunion warehouse will be able to unload trucks and store materials for less money than GM could.

"They have the union, overhead," he said. "There's no way they can compete. If they don't have a place to warehouse a part (in case the part isn't de-

Lighter weight for more payload

FLX, Inc., Evergreen, Ala., has introduced the FLX-MASTER, a lightweight aluminum body which provides for more payload. The firm said it is the only high cube with an all-aluminum cabover wind deflector that doubles as extra storage.

Prototype trucks placed on hold by Leaseway

CLEVELAND. — Leaseway Transportation Corp. has been testing two prototype retail home-delivery trucks for some nine months, but will not release complete details for another two months or so.

According to Leaseway spokesman, Patrick Gallagher, the prototypes are single-unit vehicles, resembling United Parcel Service or camper-type trucks, but he said virtually all specifications are subject to change.

Charles R. Marcoux, Leaseway president, announced the company had built the prototypes at the SAE truck and bus meeting here last November.

"We weren't satisfied with the productivity we were getting in our operations, and we were looking for something that would help stem the slow decline of the entire home-delivery market," Marcoux told the SAE.

"Unfortunately, we couldn't find a truck maker willing to develop something better."

Leaseway will need a fleet of 400 to 500 home delivery vehicles initially, but has no plans to manufacture the vehicles itself, he said.

Gallagher said Leaseway could alternatively contact a body builder and have the vehicles built just for Leaseway, or could license the design to a truck manufacturer.

Licensing the design would be the less expensive route, Gallagher said, but would eliminate the edge Leaseway would have with an exclusive efficient vehicle.

Grad Prix

Gradison's Leasing Team Helps You Win the Race for Profits

Gradison's leasing team supports dealers, just like a racing team supports its driver. When you've got a customer who's interested in a lease, we help you move out of the pit area . . . fast and efficiently. And we do it with expert service and flexible lease plans that win the race for dealer profit.

With our **Graduated Payment Lease** on 36 and 48 month plans, it's now possible to offer much lower payments during the first 12 months, with slightly higher payments during the remaining months.

Our **Used Car Leasing Program** offers leases on one and two year old cars for terms up to 36 months.

Cross the profit line first, with Gradison's leasing team backing you up all the way. The road'll be smoother; the ride'll be easier; and Gradison will get you there faster than the competition.

April penetration falls to 22.42 pct.

Import registration share declines

By Jenny L. King
Staff Writer

New import-car registrations in April dropped to their most shallow market penetration this calendar year as the domestic side of the market continued strong growth and restrictions on Japanese imports did as they were intended.

Imports claimed 22.42 percent of the April new-car registration total, down from 27.02 percent a year earlier and down from 23.80 percent the preceding month, according to figures from R. L. Polk & Co.

Registrations totaled 187,554 for the month, down 4.69 percent from 196,789 a year ago.

Honda catapulted from third into first place among the imports in April, claiming 21.52 percent of the import market, a gain of 6.69 percentage points. The Honda figure of 40,355 registrations includes both imported and Ohio-built cars. The year-earlier total for the company was 29,188 in April.

Nissan slipped to second place, losing 4.16 percentage points year to year, and Toyota dropped into third as it gave up 5.52 percentage points.

Mazda and Subaru likewise lost ground among the top imports as the German and Swedish makes gained. Volkswagen was up 1.72 percentage points; Volvo gained 0.85 percentage point; Mercedes was up 0.58 percentage point; BMW was up 1.27 percentage points and Audi gained 1.48 percentage points.

Ten makes claimed 89.92 percent of the import market in April, up 1.05 percentage points from 88.87 percent in 1983.

Four-month import registrations were up 2.80 percent over the same period in 1983, edging to 775,684 from 754,569. Penetration, however, skidded to 24.23 percent from 28.23 percent.

Honda again was on top among the imports, earning 19.94 percent of the import market, up 4.43 percentage points from 15.51 percent. Toyota held second place, dropping 3.74 percentage points, and Nissan was third, down 3.49 percentage points.

Mazda was off 0.99 percentage point for the four months and Subaru lost 0.22 percentage point. VW, Volvo, Mercedes, BMW and Audi all were ahead of 1984 levels.

The top 10 imports had 89.50 percent of the import market, down slightly from 89.69 percent.

By country of origin, Japan tumbled to 67.78 percent from 77.25 percent of the import total, comparing April of this year

Toyota promotes Maling in Chicago region

TORRANCE, Calif. — Robert C. Maling has been named assistant general manager for the Chicago region of Toyota Motor Sales, USA, Inc.

Maling has been with Toyota since 1981 and has been field operations manager of the Chicago region since August, 1983. The region serves 98 dealers in Minnesota, Illinois, Wisconsin, Indiana and the upper peninsula of Michigan.

Ex-dealer charged with $98,800 theft

QUAKERTOWN, Pa. — Bucks County Deputy District Attorney C. Theodore Fritsch has charged Alfred J. Genner, owner of defunct Quakertown Dodge, Inc., here, with several counts of theft involving $98,800 allegedly collected from customers and not properly disposed of.

Fritsch said Genner accepted $44,600 from car buyers during a six-month period that was supposed to go for sales taxes and registration fees and $54,200 to pay off outstanding loans on tradein cars or for warranty and service contracts. Fritsch charged that the money was pocketed instead.

LOOKING FOR NEW LEASING CUSTOMERS? WE'LL HAVE THEM LOOKING FOR YOU!

Leo Hamel, President Marshall Leasing, one of New England's largest leasing companies

James McCue, former CEO Boston affiliate of Friedman Sash, national market research company

Experts in the fields of leasing and advertising have combined their talents to create effective TV and radio advertising that educates and sells your target market.

Use your advertising budget to advertise - not to experiment or produce. For a fraction of the cost, use our first quality TV and coordinated radio commercials so your high advertising production costs and hassles are eliminated.

HERE'S WHAT YOU GET

- 18 :30 second market tested television commercials per year, each one tailored with your own company tag and logo.
- 36 :60 second radio commercials per year with your own company identification. Two designed to correspond to each TV ad.
- A proven complete package on how to get large groups of potential customers at your own educational leasing seminars. Package includes a video cassette of a highly successful seminar, and a detailed outline of exactly what is needed to make your seminars professional enough to attract qualified public to educate and sell.
- Guaranteed market exclusivity, renewable annually.
- Complete media buying service also available.

ADVERTISING FOR PROFESSIONALS. BY PROFESSIONALS.

April penetration falls to 22.42 pct.

Registrations show import share dip

Continued from Page 30

with 1983. West German cars increased to 14.81 percent from 10.19 percent. The U. S.-built cars of foreign-based Volkswagen and Honda went to 8.57 percent from 4.18 percent. Sweden was up to 6.46 percent from 5.21 percent in 1983. Following is a breakout of numbers of cars for the month of April:

	April, 1984	April, 1983
Japan	127,122	152,026
West Germany	27,770	20,057
United States	16,069	8,223
Sweden	12,115	10,252
France	2,457	3,871
Great Britain	1,439	1,325
Italy	555	996
Ireland	27	39
TOTAL	187,554	196,789

For the first four months, Japanese penetration dropped to 70.61 percent from 78.18 percent a year earlier. German cars accounted for 13.57 percent, up from 10.55 percent. Numbers by country of origin were:

	4 Mos., 1984	4 mos., 1983
Japan	547,994	589,894
West Germany	105,260	79,585
United States	60,279	28,637
Sweden	44,457	35,211
France	10,259	13,515
Great Britain	5,649	4,324
Italy	1,664	3,223
Ireland	122	180
TOTAL	775,684	754,569

Registrations of new imported small trucks were up 60.44 percent April to April. In April, 1984, a total of 58,843 trucks were recorded compared with 36,677 a year earlier. Numbers for the major makers were:

	April, 1984	April, 1983
Toyota	21,630	12,930
Nissan	17,213	9,893
Mazda	9,899	5,932
Dodge Ram 50	3,268	2,019
Others	6,833	5,903
TOTAL	58,843	36,677

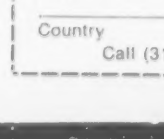
Imported truck registrations were up 59.1 percent the first four months of this year, soaring to 222,073 from 139,048. The totals included:

	1984 4 Mos.	1983 4 mos.
Toyota	81,444	46,138
Nissan	65,488	35,204
Mazda	37,793	19,607
Dodge Ram 50	12,338	8,254
Others	25,010	29,845
TOTAL	222,073	139,048

Runyon, Dauch, Tanenbaum to address World Congress

The international vehicle industry is gearing up for Automotive News Week, Aug. 26-30, which features the ninth annual Automotive News World Congress and the third annual Automotive News World Expo.

World Congress, a four-day automotive seminar, will be held at Detroit's Westin Hotel. Attendees will hear presentations by 34 top-level officials from the auto industry and related fields.



Marvin Runyon

Among those 34 are: Marvin Runyon, president, Nissan Motor Mfg. Corp., U.S.A.; Richard Dauch, executive vice president, Chrysler Corp. Stamping, Assembly and Diversified Operations Group, and Morris Tanenbaum, chairman, AT&T Communications.

Runyon will speak about Nissan's plans for passenger-car production in Smyrna, Tenn. Dauch will discuss Chrysler's new H-car. Tanenbaum's topic is the future of communication and its impact on industry.

World Expo, a three-day buy/sell trade fair, will bring leading auto and truck manufacturers and hundreds of suppliers and distributors to Cobo Hall, which is near the Westin Hotel.

Companies which exhibit at World Expo will show and sell automotive materials, machinery, design concepts and services.

Exhibitors should bring to the show purchasing personnel as well as members of the sales staff, as World Expo affords opportunities for both buying and selling, said Tony Merpi, managing director.

"World Expo is an international marketplace in which participants perform their job function — be it buying or selling," Merpi said.

Registration fee for World Congress attendees is $490, the same as last year. The fee includes: Access to 34 sessions; early morning coffee and rolls; two luncheons, three dinners, including a Tuesday Gala; a detailed workbook; hosted cocktail receptions, and entry to the World Expo.

If a registrant's plans change, the name of another individual may be substituted at any time prior to the opening. Full cancellation will be charged $100.

For further information on both events, mail in the accompanying coupon or contact Automotive News Week: Telephone — (313) 567-9520; cable-address — TWX 810-221-5122 AUTNEW.

Austin Rover teams up with Honda

Built in UK, Rover 200 uses Honda's 1.3-liter engine

To most people this car is a four-door Honda Civic sedan. To people in Britain, the rest of the European Economic Community and Spain it is a Rover 200.

Under the terms of Austin Rover Group's increasing cooperation with Honda, the Japanese company will sell the Civic only in certain European countries (Scandinavia, Austria and Switzerland) leaving the British group to cover the rest with its locally assembled Rover.

The Rover 200 is now on sale in the UK. It will be launched in export markets in the spring of next year, as Austin Rover will be busy this fall with introductions of the new Montego sedan in the rest of Europe.

The Rover is a replacement for the Triumph Acclaim, a British assembled Honda Ballade which was introduced in October 1981. As such, the arrival of Rover spells the end of Triumph as a brand name.

Acclaim sold reasonably well, approximately 101,000 in the UK since its introduction. Austin Rover put 10,000 into France, 6,600 into Italy and about 4,500 into the Benelux countries. It was made at a rate of approximately 60,000 a year, but Rover annual volumes of 72,000 are spoken of, with capacity for 96,000.

At first glance the Rover seems to conflict with the Montego. Certainly the styling similarities are apparent, given that the Honda's basic structure was fixed. ARG has grafted on its own frontal treatment, its own rear lights and interior treatment. Local content, put at 70 percent, will rise to 80 percent by the end of this year when the fascias will be sourced from the UK and a locally made engine will be offered.

At present the major mechanical components, including Honda's own 1.3-liter, 12-valve engine, are lifted out of Japanese crates. They are put together at Longbridge, Birmingham, using panels pressed by Pressed Steel Fisher. The engine option on its way is ARG's own 1.6 liter S-type.

The complication arising is that in the 1.3 the Honda engine is mounted transversely at the front with the gearbox on the right. With the 1.6 engine, location is the same but the gearbox is on the left.

Side by side, however, the differences between Rover and Montego are apparent. The Montego's length is 176 inches and wheelbase is 101 inches, compared with Rover's 163.5 inches and 96.5 inches respectively. Montego is heavier too — 2,100 to 2,300 pounds compared with 1,900 to 1,950 pounds for the Japanese-bound car.

There is a different marketing emphasis as well. While Montego is pitched against the Ford Sierra and GM's Vauxhall Cavalier (Opel Ascona) in the mass market, the Rover is seen as a little more exclusive.

Its targets are the Ford Orion sedan, VW Jetta, Volvo 300-series (a notably good seller in the UK) and even the lower rung BMW 3-series.

ARG's product lines are now as modern as they have been for years — possibly ever. The weakest link is the aging Rover sedan series, but a replacement for that — the joint Honda executive model — will be unveiled in little more than a year.

According to Mark Snowdon, managing director, commercial, "Project XX is unquestionably the most radical collaborative project undertaken by any two international motor manufacturers.

"It gives Austin Rover a manufacturing base in the Far East and allows us to act as the manufacturing center supplying both the Austin Rover and Honda XX derivatives throughout Europe. Austin Rover may well use XX to re-enter the North American market," comments Snowdon with more than an element of caution.

Exporting cars to the U.S. is a crucial element in ARG's drive to lift annual volumes from around 500,000 to 750,000. With fierce Ford and GM rivalry in the UK, the only course to lift volumes in any major way will be through exporting, at which ARG has been bad, is getting better, but still has a long way to go.

But, predicts Snowdon, "XX promises to be one of the most strikingly beautiful cars available for sale anywhere in the world, and also among the most technically advanced."

He also adds "I will not pretend that the process (collaboration with Honda) has been easy or that we have never disagreed. But our developing regard for each other's abilities has always allowed us to overcome any problems.

"We are often asked if we and Honda are planning further projects beyond XX . . . we will move forward one step at a time.

"At present there are no plans for any further collaborative arrangements. It is an option— an option of which we are both aware." That is all he will say.

However, it would be a surprise to outside observers if the collaboration did not continue to other projects, whatever the rumors of disagreements between the two companies. It would certainly allow ARG to move that extra 50 percent toward the 750,000 capacity at Cowley and Longbridge — by building European-destined Hondas in the UK.

Such a move would also allow the Japanese company to overcome the trade barriers which exist in so many large markets.

Indeed, it is hard to escape the notion that ARG's future is closely tied to that of Honda. At present there are no mutual stock holdings or financial links through third party companies. The ties to be strengthened with XX are in design, assembly and distribution.

Given the UK government's desire to shed its state-owned assets, some type of financial link with Honda looks a favorite solution. Austin Rover made a pre-tax profit last year of just under $3 million — not much, but significant because it was the first profit for longer than anyone can remember.

ARG is not saleable like Jaguar, does not have the potential like Land Rover, or is not a hopeless case like Leyland. It is a marginal business which the government does not want, in which no other manufacturer has shown an interest and which has some solid foundations with Honda.

If closer dealings with ARG are of interest to Honda, they must really excite Austin Rover.

Now sold in the UK, the Rover 213 Vanden Plas will be launched in export markets next spring.

The Austin Rover 213 SE utilizes Honda's 1.3-liter engine.

Looking for truck revival

Advances posted in West Germany and UK

A more general revival in demand for medium and heavy trucks is expected in the short term in western Europe. The advances made last year in West Germany and the UK will spread to other countries as they emerge from economic recession, predicts DRI Europe in its latest forecast for the European truck industry.

The non-European export environment will remain difficult in the short and medium term, says DRI. It will result in continued pressure on European truck producers to bring capacity more into line with deliveries.

Looking further ahead, market volumes for medium and heavy trucks are expected to remain below levels achieved at the turn of the decade. Predicted economic growth rates will not be favorable to net expansion of truck markets compared with before the recession.

At the same time the prospect of a slow revival in the medium truck demand in key non-European markets is clouded by signs of an increasing tempo in the pace of local integration in a number of such countries. The longer term outlook for exports of built-up units is correspondingly less cheerful.

DRI notes fierce price wars raging in a number of European markets. These will continue, as each producer seeks to improve plant loadings after the sharp declines of recent years. For second rank volume producers, faced with the financial and marketing muscle of the largest companies, a medium term solution lies in joint ventures for major components.

It mentions the recent deal between Holland's Daf and Spain's Enasa over joint development and production of a new cab. This and other joint ventures will heighten industry-wide competition in the mid and late '80s.

But, warns DRI, it will leave unanswered the question of adjusting capacity levels in the industry to new market conditions. More plant closures seem likely in the future, as financial losses force producers toward a reassessment of the extent of their involvement in the truck industry.

Truck output shrinks

Leyland plans to close Bathgate plant

Leyland is not alone in suffering from the dramatic downturn in demand around the world for trucks. Even so, its shrinkage from the late 1970s makes depressing reading.

The workforce is down from 28,000 to 15,000. Based now around Bathgate, Scotland, and the town in northwest England which gave its name to the company, Leyland last year produced less than 13,000 units. It has a capacity to do more than 40,000 a year.

Several smaller plants have been closed, and now Bathgate itself will close over the next two years. With it goes a proposed diesel engine manufacturing plan with Cummins and Family One.

Last year there was yet another deficit; this one in the region of $100 million. The fact that practically every other truck maker in Europe was suffering too, merely underlines the bleak future that faces Leyland.

It increased its share of the UK market last year, but at 15 percent it was half the level it was a decade earlier. Export markets have collapsed, notably in the Middle East (Iran) and Africa (Nigeria).

Leyland is now broadly similar in volumes to Daf of Holland and Enasa in Spain—both companies which acknowledge the need for closer collaboration to share costs. But even moves in this direction do not eliminate the fact that there is too much truck making capacity in Europe—a continent which does not even face real competition from Japan's heavy truck makers, at least on their home markets.

Ron Hancock, Leyland's chairman, cannot even foresee profits before 1987. With other makers battling with similar, if less severe, problems, it is little wonder that there is serious concern for the long term survival of the enterprise.

Whether a Japanese link would prove a politically acceptable answer is as dubious as whether one would be proposed in the first place. Japanese heavy truck makers like Hino, Nissan Diesel and Mitsubishi (Isuzu is tied in with GM's plans) are denied access to most of Europe.

But if any of them wanted a European entry they could have a choice of weak companies to pick from and thus acquire a sales network or attract handsome regional development grants for a green field site.

The future for Leyland Vehicles does, indeed, look uncertain.

First-half and June trail only 1978 records

Truck sales reach 2nd-best level

Continued from Page 16

cent to 47,564, versus 37,927 a year ago.

The domestic compacts accounted for 67.1 percent of the small-truck market in the first half with 581,266 sales. A year ago, they took 58.8 percent of the six-month total with 301,242 sales.

Six-month sales of the compacts imported from Japan totaled 284,929 units, an increase of 35 percent over the year-earlier 211,048.

The number of unsold trucks in retailers' hands going into July was up sharply from a year ago, with increases in all three market segments.

The total was 699,636 units, up 36.8 percent over the year-ago 511,394. There were 639,692 light trucks on hand, 25.4 percent higher than last year's 510,307. Mediums totaled 15,589, up 30 percent from the year-ago 11,989, and the heavies were 52.4 percent higher, 44,355 versus 29,098.

Big Three dealers retailed 1,629,620 new trucks in the first half, an increase of 33.9 percent over last year's 1,217,219.

Shortages of "hot" units in June caused a slowing of the sales rate. During the month, dealers sold 277,070 vehicles, up 12.1 percent over the year-ago 247,218.

Ford was No. 1 in the January-June period, with a lead of more than 10,000 units over Chevrolet.

Ford reported 599,692 sales in the first half, a gain of 26.1 percent over last year's 475,523 units. In June, dealers retailed 102,871 vehicles, 2.8 percent higher than the year-earlier 100,097.

Chevrolet's six-month sales were up 24.8 percent to 589,540 units, compared with 472,274 in the like period in 1983. June sales were off one percent, from 93,953 units a year ago to 93,061.

Dodge and Chrysler-Plymouth dealers retailed 274,813 trucks in the first half, a little more than double last year's 137,409. The downsized vans—Dodge Caravan, Plymouth Voyager and Dodge Mini Ram Van—accounted for 35.3 percent of the total with 96,971 sales.

June sales were up 82.5 percent from a year ago, 50,881 versus 27,874. The total included 18,930 of the smaller vans, or 37.2 percent of the month's sales.

GMC dealers posted their second-highest June sales total in history, and a six-year peak for the month. They retailed 30,257 units, an increase of 19.6 percent over last year's 25,294 vehicles.

Six-month sales totaled 165,575 units, up 25.4 percent from the year-ago 132,013. There were substantial gains in each weight group for the month and first half, the company reported.

June sales of Jeep four-wheel-drive vehicles hit a new high of 14,272 units, a gain of 98.7 percent over the year-ago 7,184 and 119 units more than the previous record of 14,153 in June, 1978.

Through June, the total was 74,766, up 108.1 percent over last year's 35,924. Dealers retailed 42,342 of the smaller Cherokee and Wagoneer models, which accounted for almost 57 percent of the six-month count.

Only 16 of the discontinued Volkswagen front-drive compact pickups were retailed during the month, compared with 482 last year. The first-half total was 351, versus 3,278 in the like period a year ago.

Record June and first-half sales were reported by all five distributors of compact light trucks imported from Japan.

• During the month, Toyota dealers retailed 21,509 new trucks, an increase of 25.3 percent over last year's 17,160. Through June, the total was up 53.5 percent to 121,814 units, compared with 79,358 a year ago.

June sales of Nissan/Datsun vehicles totaled 20,691 units, an increase of 63.1 percent over last year's 12,684. Dealers retailed 112,186 trucks in the first half, up 84.8 percent from the year-earlier 60,700.

The Nissan/Datsun figures for the month included 9,665 trucks assembled in the U.S., and the six-month total for the domestic units was 58,553 units.

Mazda dealers retailed 8,581 compact pickups during the month, a gain of 65.7 percent over the year-ago 5,178 vehicles. Through June, the total was up 80.6 percent to 60,038, compared with 33,245 in 1983.

During the month, sales of Isuzu trucks were 121 percent higher than a year ago, 4,875 versus 2,206. The six-month count was 19,501, an increase of 75.3 percent over the 11,125 units sold in the like period last year.

Mitsubishi dealers retailed 1,573 units in June, a gain of 125 percent over last year's 699. The first-half total of 7,431 units was 87.4 percent higher than the year-earlier 3,966.

Cincinnati Olds dealers donate $1,000 to campaign

CINCINNATI. — The Reliable Men of Olds (RMO) here presented a $1,000 check to the greater Cincinnati Chamber of Commerce Blue Chip Campaign for Economic Development.

In keeping with the Blue Chip Campaign theme, the dealer group plans to change its name to the RMO Blue Chip Dealers. The group is composed of seven Oldsmobile dealers in the area.

Group members are: Stanley Grueninger, Stanley B. Grueninger Oldsmobile-GMC Trucks, Woodlawn, O.; Robert Marlowe, Frazier - Williams Oldsmobile - Chevrolet, Milford, O.; R. B. Pulte, Bob Pulte Oldsmobile, Dent, O.; Mike Dever, Heritage Oldsmobile - Cadillac, Fairfield, O., and R. J. Fischer, Simon & Fischer, Newport, Ky.

Rounding out the group are: R. A. Behler, Behler Oldsmobile, Cincinnati, and John Robke, Rockcastle Oldsmobile-Cadillac, Florence, Ky.

The Blue Chip Campaign is a five-year economic development drive to generate business growth in the eight-county Cincinnati area.

The campaign is aimed at strengthening local business, generating new business within the region and encouraging outside businesses to relocate and invest in Cincinnati.

The campaign emphasizes strong cooperation between the public and private sectors as a major opportunity for growth.

SOUND INVESTMENT

Have you heard about ARA sound systems? We're earning an enviable reputation for sophisticated audio engineering. Our Professional Series is a superb example. In fact, only one thing sounds better: the news that you make much higher mark-ups with all ARA accessories — *and* you save on floor plan costs, too! This year, order your cars stripped. Invest in ARA accessories: air, stereo, speed control, power door locks, power windows and security systems. You'll make more money — and you'll be better able to meet your customers' exact accessory needs. Call: VP Marketing at 214/647-4111. ARA Manufacturing Company, P.O. Box 534002, Grand Prairie, Texas 75053.

Saab profits rise 80 percent; U.S. sales help

LINKOPING, Sweden.—Saab-Scania AB, the Swedish automotive and aerospace manufacturer, reported profits of $112 million for the first four months of 1984, an increase of almost 80 percent over the same period last year.

The group's consolidated sales of passenger cars, heavy-duty trucks and buses, commuter aircraft and military jets also increased 26 percent during the period. Sales outside of Sweden increased 34 percent and are now responsible for 61 percent of the manufacturer's total sales.

Sales of the Saab Car Division rose 30 percent, with sales in the U. S. up 44 percent so far this year. The U.S. is now Saab's largest individual market.

Income for the Scania Division, builder of trucks and buses, also was considerably higher than last year, owing to a greater international demand that led to a 30 percent growth in order bookings.

The Saab-Scania board of directors said it expects a continuing increase in sales and earnings for the rest of the year, though the percentage increase will be lower than for the first four months.

Reynolds chief sees jump in aluminum use in cars

NEW YORK. — An aluminum industry executive predicted a 50-percent increase in the use of aluminum in American cars by the end of this decade.

Speaking to a meeting of the International Motor Press Assn. here, William O. Bourke, president of Reynolds Metals Co., predicted that by 1990, the average U. S. car will contain at least 200 pounds of aluminum.

About 70 percent will go into cast products and the balance into wrought components, he predicted.

In 1973, there were about 80 pounds of aluminum in the typical American car, but that has risen to 137 pounds in this model year.

"Today the average car has dropped about 1,000 pounds, and aluminum makes up nearly 5 percent of the much lighter car," he said.

"Since down-sizing has gone about as far as it can go, the auto industry's desire for further improvements in performance and fuel economy will foster a greater use of lighter-weight materials," Bourke said.

The biggest weight savings will come in the form of wider use of aumnum engine blocks, cylinder heads, wheels, structural parts and radiators, he said.

Using 200 pounds of aluminum in an auto would save the average driver an estimated 400 gallons of gasoline, or about $500 in fuel costs at today's prices, over the life of the car, according to Bourke.

He cited the 1984 Corvette, which contains more than 400 pounds of aluminum and several uncommon aluminum parts, including upper and lower control arms, suspension parts, frame members and aluminum prop and drive shafts.

"If all the aluminum components now in use were put on one car, the weight savings would be about 750 pounds and MPG would increase by 30 percent," Bourke said.

Alfa warranty extended to 3 years or 36,000 miles

ENGLEWOOD CLIFFS, N. J. — Alfa Romeo, Inc., has extended the warranty on its cars to three years/36,000 miles, beginning with cars invoiced on June 1.

Called the Alfa Romeo "Pledge of Protection," the warranty will be worked through General Warranty Corp., Marina del Rey, Calif., a company spokesman said.

Under the warranty system, Alfa's normal 12 months/36,000 miles limited warranty would be in effect upon purchase of the vehicle.

If the owner does not exceed the 36,000 miles in that first year, limited warranty will be extended to 36 months and 36,000 miles.

The waranty covers the major systems of the vehicle, including engine, transmission, cooling, steering and front and rear suspension as well as brakes, electrical and air conditioning.

The Alfa spokesman said there was no extra charge to the customer for this extension. Alfa will establish a toll-free telephone number for customers to call for authorization of extended repairs.

This number is provided in the event the customer must take the vehicle to a repair facility other than an Alfa dealer, though under normal circumstances he would just take the car to the dealer.

Dodge signs Browning

CERRITOS, Calif. — Richard Browning has signed up for a new Dodge dealership in the five-acre Cerritos Auto Mall here.

Total is 123,597 despite Ford vacation and VW changeover

Full work week hikes auto output

By Joe Wilssens
Staff Writer

Domestic auto manufacturers returned to regular work schedules last week following the prior week's July 4 holiday. Weekly production rose as a result, despite a lack of output at Ford Motor Co. and Volkswagen of America.

U. S. makers projected completion of 123,597 cars last week, 30.08 percent greater than the previous week's 95,018 and 16.11 percent better than the year-ago week's 106,448.

So far this year, 4,480,410 autos have been built in the U. S., 27.41 percent above 3,516,432 finished at this time last year.

Of last week's estimated output, General Motors accounted for 74.35 percent, followed by Chrysler Corp., 19.34 percent; American Motors, 3.88 percent, and Honda, 2.43 percent.

Ford auto plants were idle for the second of two scheduled weeks of vacation while VW remained down for model changeover.

Oldsmobile began reporting production of the Calais, its GM-20 car, last week. The company slated assembly of 390 cars last week, up from 135 the previous week and 74 during the first week of production. Buick began releasing totals on its GM20, the Somerset Regal model, two weeks earlier. Pontiac has yet to make public Grand Am output totals.

Six plants scheduled daily or Saturday overtime last week.

GM's Bowling Green (Ky.), Lansing, Lordstown (O.) and Oklahoma City facilities worked Saturday (July 14) overtime.

At Chrysler, Belvidere (Ill.) and St. Louis Plant No. 2 worked two daily 9-hour shifts last week.

Chrysler's Jefferson assembly plant (Detroit) is not scheduled to operate this week due to model changeover. Production at the plant is scheduled to resume the week of July 30. About 3,300 hourly employes will be on temporary layoff during the model changeover.

Restraint decision brings Wide range of reactions

Continued from Page 61

Ford's Helen Petrauskas, vice president, environmental and safety engineering, also praised the push for mandatory belt use but was unsure whether Ford could meet the September, 1986, deadline for installation of passive restraints.

Ford added that it hoped DOT would act quickly on the changes in test procedures backed by Ford.

Chrysler Corp.'s response was quite restrained considering its history of strong opposition to passive restraints. Chairman Lee Iacocca said Chrysler "is going to work for adoption of seat-belt laws" and the company described the new standard as "a costly, complicated and cumbersome attempt at providing passenger protection," but promised to try to make it.

Marvin W. Stucky, vice president, civic and governmental affairs, American Motors, said, "There are major technical obstacles that must be overcome and for that reason a demonstration program to determine the validity of air bags should have been a mandatory step before such a far-reaching decision was promulgated.

"We think an immediate reduction in air-bag requirements should be granted as states adopt mandatory seat-belt laws. When the dust settles, the fact still remains that the seat belts now in all cars are the best safety device — bar none."

• Volkswagen of America said it intends to comply fully with the new standard. It already has on the road Rabbits with passive belts that meet the standard.

Mercedes-Benz of North America — now offering driver-only air bags to supplement its belt system — said it will comply with the standard, whether or not states pass use laws.

Canadian output cut by vacations and changeovers

Canadian manufacturers returned to five-day work schedules last week following the previous week's holiday. Auto and truck production totals, however, remained low as several makers were idle for vacations and model changes.

Shutdowns at American Motors and Ford Motor Co. caused projected auto assembly totals to dip to 13,065 last week, down 2.99 percent from the prior week's 13,467 but 1.84 percent greater than the year-ago week's 12,829.

Year-to-date, 617,271 cars have been assembled in Canada.

Likewise, a production halt at International Harvester and Ford truck facilities kept truck estimates below normal last week. The makers completed 12,317 units, 10.38 percent above the previous week's 11,159 and 54.27 percent better than the year-ago week's 7,984.

So far this year, 458,408 trucks have been built in Canada, a substantial 56.94 percent improvement over 292,089 completed during the 1983 period.

General Motors scheduled Saturday (July 14) overtime at Oshawa (Ont.) plants No. 1 and No. 2.

Truck production climbs back to 34,940 for week

Domestic truck production totals returned to near-normal levels last week following the holiday reduced build of the previous week.

U. S. truck manufacturers projected completion of 34,940 units last week, 30.17 percent greater than the previous week's 26,842 and 23.28 percent above the year-ago week's 28,341.

Jeep, International Harvester and Ford Motor Co. truck facilities were idle last week as the companies took time off for summer vacation. A slightly lower than normal weekly build was the result.

Year-to-date, 1,685,473 trucks have been completed in the U. S., 40.00 percent above 1,203,874 finished at this time last year.

Ford's suburban Hazelwood plant in St. Louis is among the company's vacationing facilities. While idle for two weeks, work proceeded on the conversion of the plant for the new Aerostar van.

"Some 400,000 square feet of building expansion have been completed and the installation of new equipment has begun," said Plant Manager Robert Hurford. Car production will resume on overtime schedules there July 16.

General Motors scheduled overtime at five facilities last week. The company's Detroit P-Plant, Janesville (Wis.), Lordstown (O.) and Pontiac S-truck and plant No. 6 worked extra hours Saturday (July 14).

AIA asks court to review passive-restraint ruling

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Sixteen auto import companies have asked the Ninth Circuit Court in San Francisco to review the passive-restraint standard announced by Transportation Secretary Elizabeth H. Dole on July 11.

Members of the Automobile Importers of America (AIA) are concerned about insufficient leadtime to install passive restraints for front-seat positions on 10 percent of production by the '87 model year.

The 16 importers want quick consideration in lieu of a stay pending appeal and they argue that this appeal—filed on July 17—is the "first instituted" since "issuance" of the standard and thus the California circuit is the one with jurisdiction.

Jurisdiction is a matter of considerable importance since on July 11, State Farm and the National Assn. of Independent Insurers (NAII) raced to the courthouse and filed with the District of Columbia Circuit Court 12 identical petitions consecutively. The 12 petitions were filed between 10:47 a.m. and 12:37 p.m.

AIA had filed with the Ninth Circuit on July 11 at 12:15 (Eastern time). AIA also filed in San Francisco on July 12 at 3:15 (Eastern time).

While AIA members—all of the importers except Volkswagen of America and Mercedes-Benz of North America—protest lack of leadtime, State Farm and NAII question the legality of linking rescission of a vehicle safety standard with state belt-use laws covering at least two-thirds of the nation's population. They also question what they consider undue delay in implementing any passive protection for occupants until the 1987-model year.

• Just as the viewpoints of the appellants differ widely, so do the courts they address.

The D. C. Circuit was the one which overturned the Reagan Administration rescission of the 1977 Carter Administration passive-restraint standard and which was upheld by the U. S. Supreme Court. It is generally viewed as liberal and sympathetic to government regulations.

The Ninth Circuit, the one that overthrew the truck anti-lock airbrake standard, is where many of the Japanese import companies have headquarters.

Jurisdiction could depend on which party got to court first and that in turn may depend on when the standard was "issued." AIA said that the time when a signed and corrected version of Standard 208 was placed in the NHTSA docket—3:58 p.m. July 11—was the time of issuance.

Although one version, unsigned and with missing pages, went to the docket at 12:38 p.m. July 11, it was not "issued" because it was incomplete. Therefore, any petition before 3:58 p.m. July 11 is premature and hence invalid.

AIA said the first valid petition—and so far the only one—is the one AIA filed on July 12.

James F. Fitzpatrick, State Farm counsel, said the Transportation Department itself has never issued a rule defining "issuance" of a standard and when State Farm asked DOT on July

Opening up the City

Honda markets ragtop

Honda's Cabriolet version of the City is the first convertible to be offered by a Japanese maker in modern times. Assembly has been subcontracted to Toyo Koki, in central Japan, because expected volume is around 500 units a month. Story on Page 57.

'85 intro dates at GM stretch for 3 months

By Joseph Bohn
Marketing Editor

The traditional new-car announcement has really been put to rest this year, at least as far as Chevrolet and Pontiac are concerned.

Chevrolet has four public intro dates for its '85 models and, on several of them, only one or two car lines will be introduced, according to well-placed dealer association presidents, who were able to sort out the considerable confusion which has surrounded Chevrolet's plans.

Pontiac isn't far behind. It has three intro dates, and they're stretched out over an even longer period than Chevrolet's.

All in all, Chevrolet's will be a series of rolling introductions. Dealers, of course, will be able to pre-sell many of the models as they arrive. But the dates are important for advertising purposes and the 5 percent carryover allowance paid on left-over '84 models.

The Chevrolet dates are: Oct. 2 for Celebrity, Citation, Monte Carlo, Impala-Caprice and Corvette.

Cavalier and Camaro will be introduced Nov. 8; Spectrum (Isuzu import), Nov. 15, and Chevette, Nov. 21.

Pontiac's dates are Oct. 2 for Parisienne, 6000, Grand Am, Bonneville and Grand Prix; Nov. 8 for Firebird and Sunbird 2000, and Jan. 10 for Fiero and 1000.

• General Motors announced earlier that '84 production runs of some smaller cars would be extended to boost its '84 CAFE average. The extension involves the J-cars, the Chevrolet Chevette and Pontiac 1000 and Fiero.

Buick, Oldsmobile and Cadillac will introduce their new models Oct. 2, except for the J-cars which will debut Nov. 8. Their J-cars are Buick Skyhawk, Oldsmobile Firenza and Cadillac Cimarron. The '85 front-wheel-drive C-cars from those divisions arrived last April.

At this point, Ford Motor Co.

May brings 16.9 pct. gain over last year

Shop volume up 15th straight month

By Francis J. Gawronski
Service Editor

The rate of growth of new-car dealers' service and parts business continued to rise in May to record another solid advance in shop business.

According to the Automotive News Service Index, service and parts volume in May amounted to 116.9 percent of the business done by the industry in the same month a year earlier. The increase in volume over the same month the year before in April was 15.1 percent.

May's increase marked the 15th consecutive month in which shop volume registered an increase over the volume of the same month a year earlier. It also was the third highest of the year.

As in the previous 13 months, all indicators used in the Service Index were on the upside in May, led by sales of parts and accessories with an increase of 20.9 percent over the volume recorded in the same month in 1983.

Shop parts sales, those used in both customer-paid and warranty work, were up 19.6 percent over the 1983 volume, while gross profit on all labor, parts and accessory sales—the most important indicator from the dealer's viewpoint — topped the previous year's gross by 18.9 percent.

Total labor sales (customer-paid and warranty) bettered last year's volume by 15.3 percent, while repair orders written improved 8.9 percent.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealers.

For the five-month period of 1984, service and parts volume was 119.0 percent of the business conducted for the same period of 1983.

The leader was parts sales for the January-May period, which escalated 27.7 percent, followed by sales of parts and accessories, which were up 22.7 percent and gross profit, up 19.2 percent.

Labor sales increased 16.2 percent for the period, while repair orders written jumped 9.7 percent.

SERVICE INDEX

116.9*

	May, '84 vs. May, '83	5 mos., '84 vs. 5 mos., '83
Gross Profit on All Labor and P&A Sales	+18.9%	+19.2%
Repair Orders Written	+ 8.9%	+ 9.7%
Total Labor Sales (Customer & Warranty)	+15.3%	+16.2%
Shop Parts Sales (Customer & Warranty)	+19.6%	+27.7%
Sales of All Parts and P&A	+20.9%	+22.7%

*—Survey by Automotive News shows that dealers service and parts business in May, 1984, was 116.9 percent of business in May, 1983. Service business in the four months of 1984 was 119.0 percent of business in the corresponding period in 1983.

breaking news

GM studies new small-car plant for Canada

OSHAWA, Ont.—General Motors is studying the possibility of building a new small-car assembly plant in Canada, according to John F. Smith, president and general manager of GM of Canada. Smith said that should the company decide to build the plant, it could be done in three years and would likely be constructed in Ontario. There is no time frame on a decision. GM recently announced it will spend $1 billion (Canadian) over the next three years to update its Oshawa facilities.

Japanese open U. S. investment HQ

KANSAS CITY.—The Japanese Chambers of Commerce has officially opened its office here with the "primary responsibility to promote investment in the United States." The office represents nearly 500 local chambers of commerce and is staffed by Yukio Sekine, who said his clients are seeking not only acquisitions but also joint ventures with companies offering "unique technology." The investment is to be made by smaller Japanese firms, not giant trading and holding empires.

New Jersey to license body shops

TRENTON, N. J. — In a move designed to protect car owners who have been involved in motor-vehicle accidents, auto body repair shops in New Jersey will be licensed, starting Oct. 1, under rules adopted by Kenneth D. Merin, acting

Import car supply climbs to 25 days as sales taper off

By Kathleen Hamilton
Assistant Managing Editor

Sales slowdowns last month relieved some of the pressure on import inventories, which eased their way up to what is still a very tight 25 days' supply, or 216,815 cars, on July 1.

One month earlier, there were 23 days' worth of cars in dealer and port stock—213,780.

The sales slowdown affected domestic sales as well as the imports, indicating it was the market—not quotas or the German metalworkers' strike—that was the biggest contributor last month to the imports' sales and inventory changes.

Nevertheless, the German strike did take its toll at BMW, Mercedes-Benz and Porsche.

Although BMW's July 1 days' supply stood at 57, it wasn't as healthy as it appeared: A sharp sales slump caused by shortage-invested inventories inflated BMW's days' supply number. Sales rates for Mercedes and Porsche also slumped as their pipelines were depleted.

By July 1, Mercedes had only eight days' supply of cars.

Porsche had 13 days' supply, but its selling rate had plummeted and its actual inventory level was halved as the marque took a double punch from the strike and from the phase-down by Volkswagen of America of its Porsche supply in anticipation of the new U.S. Porsche importer. Audi's sales picked up a bit during the month, slicing its inventory from 51 days' worth to 31.

• The success of the new Chevrolet Sprint, made by Suzuki, became apparent last month: In its second month on the market, the new little car trebled its sales and halved its inventory level, leaving it with an 18-day supply — the average level for all Japanese makes last month.

On June 1, the Japanese makes had an average of 15 days' worth of cars.

Subaru maintained its sales rate in June, and Chrysler improved its sales of Japanese cars, but the other Japanese makers won their higher days-supply numbers through slower sales.

The Japanese makes opened July with 121,233 cars in inventory, up from the 107,508 in stock on June 1.

Honda once again had only three days' worth of imported cars in stock, but its domestic Accords were at a 15-day level.

German-car inventories on July 1 stood at 53 days' worth, or 60,820, compared with 50 days and 70,086 cars on June 1.

Volkswagen contributed to the increase in days' supply with sharply reduced sales that gave it a 108-day supply of German cars on July 1. Its domestically built Rabbits were worth 70 days and were included in the July 16 Automotive News domestic-car inventory wrapup.

Renault, Saab and Jaguar increased their sales and depleted their supplies last month—Jaguar so much so that it had less than 900 cars in stock July 1. "They're fresh," a Jaguar spokesman said of the cars reaching buyers.

Volvo's sales and inventories fell last month as dealers ran out of cars to sell.

The increase in Alfa Romeo's days' supply can be traced to increased shipments; its selling rate remained steady.

• Inventories of non-German European makes fell slightly during the month, to 34,762 from 36,186. Days' supply fell, too, to 51 from 54.

The Japanese-car days' supply levels on July 1 were Honda imports, 3; Toyota, 13; Chevrolet Sprint, 18; Mazda, 20; Subaru, 20; Nissan, 22; Mitsubishi, 34; Isuzu, 57, and Chrysler, 67. By car line, the Chrysler imports from Mitsubishi were Dodge Colt, 60 days; Plymouth Vista, 61; Dodge Vista, 61; Plymouth Colt, 67; Plymouth Conquest, 109, and Dodge Conquest, 127.

The German makes and their days' supplies were Mercedes-Benz, 8; Porsche, 13; Audi, 31; BMW, 57, and VW, 108.

The days' supplies of the other European makers were Jaguar, 11; Saab, 41; Peugeot, 46; Volvo, 47; Alfa Romeo, 109, and Renault, 152.

Inventories of Japanese light trucks rose from the June 1 level of 73,652 to 79,783. Days' supply rose, too, from 29 to 34. As with cars, the cause was slower sales. Mitsubishi and Nissan saw some sales gains and Chrysler made a large gain, but drops by the other makers offset those.

The combined import-vehicle inventory on July 1 was 296,598, up from 287,432. The July 1 days' supply was 27, up from 24.

British-Korean sports car due for Calif. plant

By Richard Feast
European Editor

LONDON. — The U.S. will have a new auto maker by the second half of 1986. The Korean-owned Panther Car Co., based in the UK, appears certain to establish an assembly plant in California to produce its new EM25 sports car for the U.S. market.

Young C. Kim, chairman and chief executive, told Automotive News that the parent Jindo Group's factory near Long Beach will produce between 650 and 750 units annually for the U.S., while Panther in the UK will build around 1,000 a year for the domestic and European markets.

Kim's mid-engined two-seater will sell in the U.S. in the $18,000 bracket and in the UK at around 10,000 pounds. "There really is no competition at the price," Kim asserted.

He believes the volume-production mid-engined models by Pontiac and Toyota will appeal to different customers. And he is very much aware of the relatively cheap sports cars which are being developed by Lotus and Reliant in England with American exports in mind.

EM25 will use an aluminum body and chassis made by one of the Jindo companies in South Korea. These will be sent to California and England for final assembly.

The new car will weigh less than 1,900 pounds. It will be powered by a turbocharged version of Ford's 1.6-liter CVH engine and have a top speed of 120 MPH.

Kim said that over the longer term, performance and market appeal will be further enhanced by offering a bigger engine option.

All key mechanical components — steering, suspension, braking, transmission, electronics and so on — are stock Ford parts.

• The car is the design work of three men. Len Bailey, who was responsible for Ford's GT40 race cars of the 1960s, is the chassis engineer. The others are Ken Greenley, a former Vauxhall stylist who is now a lecturer at London's Royal College of Art,

Sky-Top skytop for 300-ZX

Sky-Top Sunroofs, Ltd., St. Louis, is marketing a power moonroof to fit the 1984 Datsun 300-ZX 2+2 coupe. It is electrically operated and there is nothing to lift off or store, Sky-Top said.

Chrysler's $803 million is alltime top quarter

By Michelle Krebs
Financial Editor

Chrysler Corp. reported record earnings of $802.9 million, or $6.48 per share, and record sales of $5.3 billion for the second quarter of this year. It was the most profitable quarter in Chrysler's history.

"This kind of performance ain't bad for a broke company," said Chrysler Chairman Lee A. Iacocca at a press conference to announce the earnings.

Earnings for the quarter were up 159 percent from the same quarter last year when Chrysler earned $310.3 million, or $2.41 per share, on sales of $3.6 billion.

The second-quarter earnings also broke Chrysler's any-quarter record of $705.8 million in the first three months of this year.

First-half earnings totaled $1.5 billion, or $12.12 per share, compared with last year's $482.4 million, or $4.72 per share. Earnings for the half surpassed full-year earnings of $700.9 million in 1983.

"The real news in the second quarter, in one word, is volume," said Iacocca. "While the market isn't on fire, it is healthy . . . Some of our products are on fire. The minivans continue to be sold out for the year. The (Chrysler) Laser/(Dodge) Daytona, for the first time in June, cracked the 10,000 sales per month mark."

Sales for the first half of 1984 totaled $10.2 billion, compared with last year's $6.7 billion.

Iacocca noted that Chrysler's combined car and truck market share in North America rose to 11.5 percent in the first half from 11.0 percent last year.

"In the turbo/minivan/Laser world, we're seeing people we never saw before," Iacocca said. "The last research I saw showed about 30 percent of those buyers have never been in a Chrysler dealership in their life. And the buyers are young — 35 to 38."

• Nevertheless, Iacocca warned workers and the UAW: "It's not all euphoric. It's not all over yet. We've got a $9.5 billion capital investment program (over the next five years) to finance.

"And with the $800 million being reported today, the deficit since I came on board drops to $1.1 billion. Before this, it was $1.9 billion, and when I took

Allows buyer to select model and equipment

Chevy computer to change selling

By Joseph Bohn
Marketing Editor

Chevrolet is launching an experimental program, the outcome of which could have a profound impact on the way dealerships sell cars and trucks in the future.

The division is putting "Chevy vision" computer terminals with torch screen operation into 50 dealerships, according to one of the software companies bidding on the project.

The new system allows a customer to select and completely spec out any vehicle according to his inclinations.

He might start with a truck with a specified amount of payload and keep feeding the machines questions about colors, options etc., until he has the choice or choices he desires.

Ford already has such a computer at Metropolitan Airport in Detroit.

Ford's computer is more a promotional and informational tool, though, and geared to giving prospecting opportunities to dealers.

Prospects who use it provide names and addresses, allowing dealers to call back at a later day and pitch them on the kind of product on which they were soliciting information from the computer.

• Chevrolet's move, though, raises interesting questions about how vehicles will eventually be sold.

Some observers maintain that salesmen can never be replaced. But others feel that eventually there'll be a need for fewer salespeople as a result of such computers.

"Nobody's saying it, but it may greatly reduce the number of salespeople. A customer specs out his car. You get computerized information and approval on financing from GMAC. You have electronic fund transfers," noted one observer, who compares the outcome to shopping at Photomat.

At the very least, it will reduce the number of sales brochures, data books, catalogs and a raft of materials currently carried in dealerships.

Call it 21st century marketing, or "re-inventing the wheel."

The future, as it was described by some merchandising people only a few years ago, is beginning to arrive.

From Hess & Eisenhardt

Chevrolet dealers across the country are marketing this '85 Chevrolet Celebrity convertible from Hess & Eisenhardt Co., Cincinnati. It features power top, power quarter windows and is available with Eurosport and tempered glass/rear window defogger options.

Canadian UAW wants increase—now

Chrysler profits spur wage demand

By Marjorie Sorge
Labor Editor

UAW Vice President Robert White has called for an immediate wage increase and improvements in pension benefits for Chrysler workers in light of the company's record first-half profits.

In a telegram to William S. Fisher, Chrysler Canada personnel director, White called for an immediate $1.01 per hour (Canadian) wage increase and $40 additional a month for pensioners. That amounts to $0.75 in U. S. dollars for hourly workers and $30 a month for pensioners.

White, director of the UAW's Canadian region, called for an immediate meeting to discuss the situation.

At presstime the UAW in the U. S. had not made a similar demand.

Chrysler last week reported profits of $1.5 billion for the first six months of 1984; $706 million for the first quarter and $803 million for the second quarter. It projects full-year profits of $2.5 billion. White said the Canadians are responsible for 25 percent of those profits.

At a press conference announcing the record profits, Chairman Lee A. Iacocca said the current labor contract is a good one for Chrysler workers. He said labor rates have gone up another $1.70 an hour since the contract was negotiated in August, 1983.

Chrysler said it has received the UAW's telegram, is studying it and "will respond in due course."

• "The latest sales and profit figures for Chrysler Corp. show not only a complete recovery for Chrysler but also a complete recovery for Chrysler of Canada," White's telegram said. "Chrysler workers are still over $1 an hour behind Ford and General Motors workers as a result of concessions that were made in 1979, 1980 and 1981. Pensions are still far behind as are other benefits.

"I am, therefore, calling for Chrysler to return Chrysler workers, both hourly and salaried, and Chrysler Corp. retirees to full parity with Ford and GM workers immediately. There is no reason why Chrysler workers should be subjected to these continuing concessions and be denied parity until September, 1985. The cost of returning these wages and benefits is microscopic compared to Chrysler profits."

White estimated that the increases would cost Chrysler $20 million in Canada (about $15 million in U. S. dollars). There are about 10,000 UAW-represented Chrysler Canada workers. Their wages would improve between $1,600 and $2,000 annually with the increases, he said.

White did not call for a reopening of the current contract which expires in October, 1985. That contract gives the workers a 38-cent-an-hour raise in May of 1985, 40 cents in June of that year and 23 cents in September. He is demanding the entire amount now. The increases would also affect holiday pay, overtime and shift premiums, he said.

An assembler at Chrysler Canada currently makes $9.62 an hour plus $2.43 cost-of-living-adjustment, or $12.05 an hour Canadian ($9.04 U. S.).

Pensions would increase from $895 a month Canadian to $935 (or $702 U. S.).

In the three contracts negotiated during the recession in the auto industry, Chrysler workers made concessions worth more than $1 billion, company-wide. Of that Chrysler Canada workers made concessions worth $100 million.

Shorter work time an issue as talks open at Big Two

Canada Ford seeks softer contract

By Marjorie Sorge
Labor Editor

TORONTO. — Substantial wage and pension increases and more time off the job are the major demands of the Canadian UAW, which opened contract talks with General Motors of Canada and Ford Motor Co. of Canada last week.

UAW Vice President Robert White, director of the Canadian region, said the UAW is asking for an upfront wage increase, annual wage improvement of more than 3 percent in the first year of the contract and 3 percent in the second and third years.

He also said the Canadian UAW intends to build on the made-in-Canada contracts first negotiated in 1982.

"The pre-1982 days of rubber stamping (the U. S. contracts) are gone," he said.

The two auto companies, however, seemed to call for moderation in contract demands, citing their need to be competitive as a major issue.

The contracts at both companies expire Sept. 14. Both the companies and the union have said they believe a settlement can be reached without a strike.

White, who indicated that a three-year pact is preferable, presented the UAW demands to the auto companies and, in the process, received a little surprise from Ford.

While GM listened to the demands and presented none of its own, Ford immediately asked for reduction in representation and changes in work practices. White labeled the demands "concessions" and indicated the union would not agree to any of those changes.

Arthur W. Hanlon, industrial relations vice president for Ford of Canada, said the company's proposals are not concessions but changes in work practices that "are nettlesome to us."

Hanlon said he has a "hunch" that the UAW in the U. S. will be presented with similar demands when talks open with Ford tomorrow (July 24).

Another area of conflict is the shorter worktime. The Canadian UAW maintains it is entitled to nine paid days off a year (or 72 hours), the equivalent of what it gave up in the 1982 contract when the paid personal holidays (PPH) were eliminated. The UAW is not necessarily tied to the PPH formula, just to the nine days off annually.

Both Ford and GM are opposed to return of the PPH days.

"We feel (the paid personal holidays) were very detrimental to the production of automobiles," said Rodney L. Andrew, general director of personnel for GM of Canada. "It probably was a detriment in the area of quality because of rotating people on certain jobs. Most assuredly, it hurt us in the cost factor and it will be a very tough issue."

Hanlon agreed with Andrew that PPH days cause quality problems. He called them another form of absenteeism and said: "I don't see a lot of merit in it."

While both companies are opposed to a return of PPH days, there were indications that both have been studying alternatives for shorter worktime. White also said that while the UAW is committed to reducing worktime, the union would be willing to listen to alternative plans if the auto companies could prove PPH days hurt quality.

Negotiations in Canada, as well as the U. S., began when the Big Two are sporting substantial profits on both sides of the border. GM of Canada made $675.6 million in 1983 and, according to the UAW, it has made more than that in the first six months of this year. In 1981, it lost $10.3 million and in 1982, it lost $71.7 million.

Ford of Canada made $85 million in 1983 and, according to White, made $100 million in the first quarter of 1984. In 1982, Ford was losing $1 million a day.

Hanlon said this past showing must be kept in perspective when discussing the current profits.

"You can't just take one year's performance," he said. "There is no guarantee for the future. You can't count money you haven't taken into the coffers yet.

"And, also, we suffered severe balance sheet damage. We made $153 million last year in consolidated operations and in Canada alone, $85 million. But in the last four years, we lost something like $400 million. You have to look at that."

The Canadian UAW has demanded significant improvements in wages, but the two companies indicated moderation is the key.

"I understand the demand, of course," said Andrew. "But you have to take another thing into perspective. The Canadian UAW is about 30 percent over the manufacturing average of all of Canada. Its members are among the best paid factory employes in the country and throughout the world.

"And, of course, to stay competitive we have got to look at the world. After all, a great deal of the production in Canada is shipped outside so we are trying to, number one, get jobs to come into Canada. Do I think the demand is justified? Certainly. If we are making a profit, we expect the UAW to come to us with that demand."

Workers in Canada make $13.07 (Canadian) an hour at GM or $9.80 an hour in U. S. currency and $13.08 an hour Canadian or $9.81 U. S. at Ford. That includes $3.44 cost-of-living-adjustment (COLA) Canadian or $2.59 U. S.

In the U. S., workers make about $12.67 an hour at GM and $12.68 an hour at Ford. Both include $3.04 COLA.

In the 1982 Canadian contract, the Big Two and the UAW agreed to base the COLA formula on Canadian inflation beginning this March. In the past, it was based on the combined Canadian/U. S. Consumer Price Index and is still that way in the U. S.

Other demands by the UAW include affirmative action proposals, getting more women on the job, child care programs, a legal services plan, a nutrition program, a fitness program and more paid educational leave.

New Jersey fines three dealerships on price ads

NEW EGYPT, N. J. — Three New Jersey new-car dealerships have been ordered to pay fines for violating a Division of Consumer Affairs regulation prohibiting advertisements that compare auto prices with a dealer's cost or inventory price.

Superior Court Judge Paul B. Thompson ordered J. P. Chevrolet, Inc., to pay $1,000, but only after the dealership had agreed to stop advertising its car prices at "$49 over invoice."

Wild Bill's Paramus Dodge, Inc., and Wild Bill's Paramus Chrysler Plymouth were also fined a total of $6,500 for a similar violation. Wild Bill's advertisements reproduced a factory invoice with an arrow pointing to the price with the statement, "Buy at rock bottom."

Judge Thompson said he based his decision on a Feb. 4, 1984, ruling by the Appellate Division of Superior Court upholding the Division of Consumer Affairs' regulation against a challenge by Arrow Pontiac in Little Falls, N. J.

State Consumer Affairs Director James Barry said the 1976 regulation is intended to prevent deceptive or misleading advertising.

Two ponies for a pickup

Ted Britt Ford Sales, Inc., Fairfax, Va., has built a reputation on the slogan "We Trade Anything." M. G. (Ted) Britt, owner and chairman of the dealership, is living up to his reputation. Britt is shown with Katherine Mack, of Middleburg, Va., and the two Irish Conamara ponies she traded for a Ford F-250 4x4 pickup truck.

Will spend $250 million to convert St. Louis plant for '86 models

Chrysler to build minivans in U. S.

By Michelle Krebs
Financial Editor

Chrysler Corp. last week confirmed that the St. Louis Assembly Plant II will be the second plant to produce its popular minivans for the 1986 model year.

Chrysler's Windsor (Ont.) facility presently is the sole plant for production of the Plymouth Voyager, Dodge Caravan and Dodge Mini Ram Van, which are virtually sold out for the rest of the model year. The plant has been running at full capacity to meet the demand, and Chrysler has experimented with a third shift in Windsor, though that did not work.

Chrysler said it will spend $250 million to convert the St. Louis plant, where rear-wheel drive passenger cars now are built. The conversion, which involves expanding the plant by 224,000 square feet, begins in June, 1985.

Chrysler Chairman Lee A. Iacocca said the plant will start off at a rate of 160,000 minivans per year, but combined production of the St. Louis and Windsor plants will climb quickly to 430,000 per year, he said.

Iacocca appeared undaunted by the fact that Ford Motor Co. and General Motors will have minivan entries in the coming model year.

"We know there's competition coming . . . But the more we see of them, the more we see they differ from our concept completely," Iacocca said, calling the competitions' minivan versions "chopped trucks."

• The St. Louis plant now employs 3,400, and Chrysler said that employment level will be maintained.

The St. Louis plant produces the Chrysler Fifth Avenue, Dodge Diplomat, Plymouth Gran Fury and Plymouth Caravelle Salon, which were moved to St. Louis from the Windsor plant to accommodate minivan production.

Iacocca said a decision on how long Chrysler will continue to produce the rear-wheel drive cars has not been made.

"We decided two years ago to drop it . . . The thing won't die," Iacocca said, adding it may be continued "in some form somewhere."

In addition, no decision has been made on where the P-car will be built. The P-car was originally planed as a replacement for the Dodge Omni and Plymouth Horizon.

Iacocca said there is no guarantee the P-car will be produced at Chrysler's Belvidere (Ill.) plant, where the Omni and Horizon are made. At Chrysler's annual meeting in June, Iacocca said the company is hesitant to discontinue production of the cars as originally planned since they are selling well.

Sweetening the grand opening

An angel food cake sweetened festivities at the grand opening of Banning Chrysler - Plymouth - Dodge, Banning, Calif. Co-owners Gil Feuerman, left, and John Holderness, right, flank Chrysler Corp. executives Jan Thompson, sales planning and distribution manager, Los Angeles zone, and Cory Whittaker, district manager.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. New York, Oklahoma, 1984, from manufacturers' sales records. Oklahoma '83 figures not available. Current Alaska delayed.

May total tops 1983 by 14 pct.

Registrations reach 5-year peak

By Jenny L. King
Staff Writer

May new-car registrations were up 5.89 percent from the preceding month and made a 14.64 percent gain over year-earlier figures, according to numbers from R. L. Polk & Co.

Registrations were highest for May since 1979. The May record is 1,061,204, set in 1973.

Combined domestic and imported-car numbers totaled 885,974, up 5.89 percent from 836,717 in April and up 14.64 percent from 772,842 in May of 1983.

The import share of the market plunged nearly four percentage points, to 22.44 percent this May from 26.40 percent a year ago.

Domestic registrations climbed 20.82 percent May to May, to 687,178 from 568,789. Ford Motor Co. and General Motors made substantial gains in their shares of the month's market, as Chrysler, AMC and the imports fell back.

Ford was ahead 2.18 percentage points, to 18.63 percent from 16.45 percent and GM expanded 3.07 percentage points, to 47.54 percent from 44.47 percent.

For the month, Chrysler dropped 0.82 percentage points, to 9.71 percent from 10.53 percent. American Motors slipped 0.46 percentage points, to 1.68 percent from 2.14 percent, and miscellaneous domestics were off the map, down from 0.01 percent 12 months earlier.

Table on Page 56.

• With imports yielding four percentage points in the market class area, subcompacts, compacts, intermediates and luxury cars all increased penetration.

U. S. subcompacts were up to 12.33 percent in May from 11.99 percent last year; compacts grew to 19.17 percent from 16.38 percent; intermediates were up to 27.68 percent from 26.01 percent, and luxury models claimed 7.96 percent, up from 5.39 percent.

state insurance commissioner. The rules will apply to 4,500 to 6,000 body shops statewide. They must apply for a license by Aug. 31. The rules require shops to give customers written estimates, and to maintain copies of all invoices, work orders and estimates for two years. Violators will face license suspension or revocation. They could be fined up to $2,000 for a first offense and $5,000 for a second offense.

Engine milestones marked in Japan

TOKYO.—June was a milestone month for engine production by Japanese auto makers. Toyota built its one-millionth twin-cam, in-line six during the month, the first time any Japanese maker had reached that production figure. Nissan built its 200,000th V-6 during June.

Six European auto makers battling for sales leadership

By Dan McCosh
Detroit Reporter

Europe's highly competitive car market hit the halfway point at about 5.6 million units, down less than 3 percent from last year, despite the effects of a seven-week strike that shut down most of West Germany's auto production.

The volatile market saw Renault slide to sixth place from its No. 1 spot at the end of 1983, while the long-dormant United Kingdom market was running at record strength with a decline in import penetration.

Ford surged to a five-year high, while GM presented a strong challenge.

The fact that the two French auto makers, Renault and Peugeot-Citroen, were in sixth and fifth place and showed the largest year-to-year losses defied the analysis that the West German strike was the most significant factor in the overall slip.

GM credits the success of its Vauxhall Cavalier (J-car) for most of its recent sales gains. The car has been particularly successful against the Ford Sierra in the UK fleet market — an arena that was formerly dominated by Ford's Cortina which Sierra replaced.

Preliminary figures for the top six in the first half show Fiat in the lead, with 744,400, a 13.2 percent market share; Ford second with 733,500, a 13 percent share; Volkswagen-Audi at 666,500, an 11.8 percent share; GM at 655,000, an 11.6 percent share; Peugeot at 639,700, an 11.3 percent share, and Renault at 594,900, a 10.5 percent share.

Rankings a year ago were Ford, Renault, Volkswagen, Fiat, Peugeot and GM.

But it wasn't, so owners sue GM

The 'last' convertible

By Jake Kelderman
Washington Reporter

WASHINGTON. — And now one for "the best laid schemes of mice and men gang aft agley" category:

Abraham P. Korotki, a Baltimore attorney, thought he had a real investment when he bought his loaded Cadillac Eldorado convertible in August, 1976, for $16,250.

GM said this would be the "last convertible in America," and Korotki figured it would become a valuable collector's item.

Imagine Korotki's surprise then when GM again offered convertibles in 1983. Korotki was so surprised, in fact, that he decided to sue GM for alleged fraudulent advertising.

A local chiropractor, Richard K. Adolph, felt the same way and joined Korotki in demanding that GM compensate them and all other 1976 Cadillac convertible owners, about 14,000 across the country, for alleged loss of value.

GM attorneys, not unexpectedly, maintain there is no evidence to supoprt Korotki's claims that GM intended, as part of a fraudulent scheme, to resume convertible production after the 1976 model year.

A U. S. District Court judge in Baltimore will decide the case later this year.

Convertible popularity reached its peak in 1965 when U. S. producers sold about 500,000 ragtops. Seven years later, though, they sold only about 76,000 and by 1973, American Motors, Ford Motor and Chrysler Corp. had stopped production. In 1976, GM built the "last" of its convertibles.

In the auto business, however, things have a habit of coming around again, and in 1981 Chrysler reinvented the ragtop. At the end of 1983, convertibles held a 2 percent share of the new-car market.

'86 Jeep pickup will be called the Comanche

Comanche has been selected as the name for a new down sized Jeep pickup truck for 1986.

Joseph E. Cappy, American Motors group vice president sales and marketing, said that although introduction of the new pickup truck to be built off the XJ Jeep Cherokee-Wagoneer platform—is still a year away, the company decided to announce the Comanche name in advance "to begin to whet the public appetite."
